

Wheel.lvlib:Wheel_Get_Value.vi

Help by FRC Team 836

This VI will return the actual set parameters of wheel.

maxNegativePwm: 0

minNegativePwm: 0

angularRange: 0

Set Point

Actual

 **Wheel DevRef Out**

 **Shooter Config reference**

Shooter Data

MotorControlDevRef

DeviceStatus

status

status is TRUE (X) if an error occurred or FALSE (checkmark) to indicate a warning or that no error occurred.

Right-click the **error in** control on the front panel and select **Explain Error** or **Explain Warning** from the shortcut menu for more information about the error.

code

code is the error or warning code.

Right-click the **error in** control on the front panel and select **Explain Error** or **Explain Warning** from the shortcut menu for more information about the error.

source

source describes the origin of the error or warning.

Right-click the **error in** control on the front panel and select **Explain Error** or **Explain Warning** from the shortcut menu for more information about the error.

Type

PWM

 PWM Channel

 CAN

 Device Number

 Control Mode

Semaphore

 **semaphore** is a reference to an existing or newly created semaphore.

 Max Vout

TalonSRX Control Mode

Control Mode specifies how the Talon SRX will control the motor. Percent VBus is the standard open-loop mode that is also accessible via the PWM interface on the Talon SRX.
