[Missing <summary> documentation for "N:Calendar.NET"]

☰ Classes

	Class	Description
	<u>Calendar</u>	A Winforms Calendar Control
	<u>CustomEvent</u>	A custom or user-defined event
	<u>CustomRecurringFunction</u>	An attribute to mark Custom Recurring Functions
	<u>HolidayEvent</u>	An event that defines a holiday
	<u>RectangleComparer</u>	

▣ Interfaces

	Interface	Description
→	<u>IEvent</u>	An interface for creating event types

Delegates

	Delegate	Description
	CustomRecurringFrequenciesHandler	A delegate for creating custom recurring frequencies

☐ Enumerations

	Enumeration	Description
	CalendarViews	An enumeration describing various ways to view the calendar
	RecurringFrequencies	An enumeration of built-in recurring event frequencies

A Winforms Calendar Control

Namespace: [Calendar.NET](#)

Assembly: Calendar.NET (in Calendar.NET.dll) Version: 1.0.0.0 (1.0.0.0)

☐ Syntax

C#

```
public class Calendar : UserControl
```

Visual Basic

```
Public Class Calendar _  
    Inherits UserControl
```

Visual C++

```
public ref class Calendar : public UserControl
```

The [Calendar](#) type exposes the following members.

≡ Constructors

	Name	Description
	Calendar	Calendar Constructor

Methods

	Name	Description
	AccessibilityNotifyClients(AccessibleEvents, Int32)	Notifies the accessibility client applications of the specified AccessibleEvents for the specified child control. (Inherited from Control .)
	AccessibilityNotifyClients(AccessibleEvents, Int32, Int32)	Notifies the accessibility client applications of the specified AccessibleEvents for the specified child control. (Inherited from Control .)
	AddEvent	Adds an event to the calendar.
	AdjustFormScrollbars	(Inherited from ContainerControl .)
	BeginInvoke(Delegate)	Executes the specified delegate asynchronously on the thread that the control's underlying handle was created on. (Inherited from Control .)
	BeginInvoke(Delegate, Object[])	Executes the specified delegate asynchronously with the specified arguments, on the thread that the control's underlying handle was created on. (Inherited from Control .)
	BringToFront	Brings the control to the front of the z-order. (Inherited from Control .)
	Contains	Retrieves a value indicating whether the specified control is a child of the control. (Inherited from Control .)
	CreateAccessibilityInstance	Creates a new accessibility instance for the control.

		(Inherited from Control .)
	CreateControl	Forces the creation of the control, including the creation of the window handle and any child controls. (Inherited from Control .)
	CreateControlsInstance	Creates a new instance of the control collection for the control. (Inherited from Control .)
	CreateGraphics	Creates the Graphics for the control. (Inherited from Control .)
	CreateHandle	Creates a handle for the control. (Inherited from Control .)
	CreateObjRef	Creates an object that contains the relevant information required to generate a proxy used to communicate with a remote object. (Inherited from MarshalByRefObject .)
	DefWndProc	Sends the specified message to the default window procedure. (Inherited from Control .)
	DestroyHandle	Destroys the handle associated with the control. (Inherited from Control .)
	Dispose()	Releases all resources used by the Component . (Inherited from Component .)
	Dispose(Boolean)	(Inherited from ContainerControl .)
	DoDragDrop	Begins a drag-and-drop operation. (Inherited from Control .)
	DrawToBitmap	Supports rendering to the specified bitmap. (Inherited from Control .)
		

	EndInvoke	Retrieves the return value of an asynchronous operation represented by the IAsyncResult passed. (Inherited from Control .)
=	Equals	Determines whether the specified Object is equal to the current Object . (Inherited from Object .)
💡	Finalize	Releases unmanaged resources and performs other cleanup operations before the Component is reclaimed by garbage collection. (Inherited from Component .)
=	FindForm	Retrieves the form that the control is on. (Inherited from Control .)
=	Focus	Sets input focus to the control. (Inherited from Control .)
💡	GetAccessibilityObjectById	Retrieves the specified AccessibleObject . (Inherited from Control .)
💡	GetAutoSizeMode	Retrieves a value indicating how the control will behave when its AutoSize property is enabled. (Inherited from Control .)
=	GetChildAtPoint(Point)	Retrieves the child control located at the specified coordinates. (Inherited from Control .)
=	GetChildAtPoint(Point, GetChildAtPointSkip)	Retrieves the child control located at the specified coordinates, specifying whether to ignore child controls of a certain type. (Inherited from Control .)

 GetContainerControl	Returns the next ContainerControl up the control's chain of parent controls. (Inherited from Control .)
 GetHashCode	Serves as a hash function for a particular type. (Inherited from Object .)
 GetLifetimeService	Retrieves the current lifetime service object that controls lifetime policy for this instance. (Inherited from MarshalByRefObject .)
 GetNextControl	Retrieves the next control forward or back in the tab order of child controls. (Inherited from Control .)
 GetPreferredSize	Retrieves the size of a rectangular area into which a control can be fitted. (Inherited from Control .)
 GetScaledBounds	Retrieves the bounds within which the control is scaled. (Inherited from Control .)
 GetScrollState	Determines whether the specified scroll flag has been set. (Inherited from ScrollableControl .)
 GetService	Returns an object that represents the service provided by the Component or by its Container . (Inherited from Component .)
 GetStyle	Retrieves the value of the specified control style bit for this control. (Inherited from Control .)
 GetTopLevel	Determines if the control is a top-level control.

		(Inherited from Control .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	Hide	Conceals the control from the user. (Inherited from Control .)
	InitializeLifetimeService	Obtains a lifetime service object to control the lifetime policy for this instance. (Inherited from MarshalByRefObject .)
	InitLayout	Called after the control has been added to another container. (Inherited from Control .)
	Invalidate()	Invalidate the entire surface of the control and causes the control to be redrawn. (Inherited from Control .)
	Invalidate(Region)	Invalidate the specified region of the control (adds it to the current update region, which is the region that will be repainted at the next paint operation), and causes a paint message to be sent to the control. (Inherited from Control .)
	Invalidate(Boolean)	Invalidate a specific region of the control and causes a paint message to be sent to the control. Optionally, invalidate the controls assigned to the container. (Inherited from Control .)
	Invalidate(Rectangle)	Invalidate the specified region of the control (adds it to the current update region, which is the region that will be repainted at the

		<p>paint operation), and causes paint message to be sent to control. (Inherited from Control.)</p>
	<p>Invalidate(Region, Boolean)</p>	<p>Invalidates the specified region of the control (adds it to the current update region, which is the region that will be repainted at the next paint operation), and causes a paint message to be sent to the control. Optionally, invalidates the child controls assigned to the control. (Inherited from Control.)</p>
	<p>Invalidate(Rectangle, Boolean)</p>	<p>Invalidates the specified region of the control (adds it to the current update region, which is the region that will be repainted at the next paint operation), and causes a paint message to be sent to the control. Optionally, invalidates the child controls assigned to the control. (Inherited from Control.)</p>
	<p>Invoke(Delegate)</p>	<p>Executes the specified delegate on the thread that owns the control's underlying window handle. (Inherited from Control.)</p>
	<p>Invoke(Delegate, Object[])</p>	<p>Executes the specified delegate on the thread that owns the control's underlying window handle, with the specified list of arguments. (Inherited from Control.)</p>
	<p>InvokeGotFocus</p>	<p>Raises the GotFocus event on the specified control. (Inherited from Control.)</p>
		

	InvokeLostFocus	Raises the LostFocus event specified control. (Inherited from Control .)
	InvokeOnClick	Raises the Click event for the specified control. (Inherited from Control .)
	InvokePaint	Raises the Paint event for the specified control. (Inherited from Control .)
	InvokePaintBackground	Raises the PaintBackground event for the specified control. (Inherited from Control .)
	IsInputChar	Determines if a character is an input character that the control recognizes. (Inherited from Control .)
	IsInputKey	Determines whether the specified key is a regular input key or a special key that requires preprocessing. (Inherited from Control .)
	MemberwiseClone()	Creates a shallow copy of the current Object . (Inherited from Object .)
	MemberwiseClone(Boolean)	Creates a shallow copy of the current MarshalByRefObject object. (Inherited from MarshalByRefObject .)
	NotifyInvalidate	Raises the Invalidated event for a specified region of the control. (Inherited from Control .)
	OnAutoSizeChanged	Raises the AutoSizeChanged event. (Inherited from Control .)
		

	OnAutoValidateChanged	Raises the AutoValidateCh event. (Inherited from ContainerControl .)
	OnBackColorChanged	Raises the BackColorChan event. (Inherited from Control .)
	OnBackgroundImageChanged	Raises the BackgroundImageChanged event. (Inherited from Control .)
	OnBackgroundImageLayoutChanged	Raises the BackgroundImageLayoutC event. (Inherited from Control .)
	OnBindingContextChanged	Raises the BindingContextChanged ev (Inherited from Control .)
	OnCausesValidationChanged	Raises the CausesValidationChanged e (Inherited from Control .)
	OnChangeUICues	Raises the ChangeUICues e (Inherited from Control .)
	OnClick	Raises the Click event. (Inherited from Control .)
	OnClientSizeChanged	Raises the ClientSizeChang event. (Inherited from Control .)
	OnContextMenuChanged	Raises the ContextMenuCh event. (Inherited from Control .)
	OnContextMenuStripChanged	Raises the ContextMenuStripChanged event. (Inherited from Control .)
	OnControlAdded	Raises the ControlAdded ev (Inherited from Control .)
	OnControlRemoved	Raises the ControlRemove

		event. (Inherited from Control .)
	OnCreateControl	Raises the CreateControl event. (Inherited from UserControl .)
	OnCursorChanged	Raises the CursorChanged event. (Inherited from Control .)
	OnDockChanged	Raises the DockChanged event. (Inherited from Control .)
	OnDoubleClick	Raises the DoubleClick event. (Inherited from Control .)
	OnDragDrop	Raises the DragDrop event. (Inherited from Control .)
	OnDragEnter	Raises the DragEnter event. (Inherited from Control .)
	OnDragLeave	Raises the DragLeave event. (Inherited from Control .)
	OnDragOver	Raises the DragOver event. (Inherited from Control .)
	OnEnabledChanged	Raises the EnabledChanged event. (Inherited from Control .)
	OnEnter	Raises the Enter event. (Inherited from Control .)
	OnFontChanged	Raises the FontChanged event. (Inherited from ContainerControl .)
	OnForeColorChanged	Raises the ForeColorChanged event. (Inherited from Control .)
	OnGiveFeedback	Raises the GiveFeedback event. (Inherited from Control .)
	OnGotFocus	Raises the GotFocus event. (Inherited from Control .)
	OnHandleCreated	Raises the HandleCreated event. (Inherited from Control .)

 OnHandleDestroyed	Raises the HandleDestroyed event. (Inherited from Control .)
 OnHelpRequested	Raises the HelpRequested event. (Inherited from Control .)
 OnImeModeChanged	Raises the ImeModeChanged event. (Inherited from Control .)
 OnInvalidated	Raises the Invalidated event. (Inherited from Control .)
 OnKeyDown	Raises the KeyDown event. (Inherited from Control .)
 OnKeyPress	Raises the KeyPress event. (Inherited from Control .)
 OnKeyUp	Raises the KeyUp event. (Inherited from Control .)
 OnLayout	Raises the Layout event. (Inherited from ContainerControl .)
 OnLeave	Raises the Leave event. (Inherited from Control .)
 OnLoad	Raises the Load event. (Inherited from UserControl .)
 OnLocationChanged	Raises the LocationChanged event. (Inherited from Control .)
 OnLostFocus	Raises the LostFocus event. (Inherited from Control .)
 OnMarginChanged	Raises the MarginChanged event. (Inherited from Control .)
 OnMouseCaptureChanged	Raises the MouseCaptureChanged event. (Inherited from Control .)
 OnMouseClicked	Raises the MouseClicked event. (Inherited from Control .)
	

	OnMouseDoubleClick	Raises the MouseDoubleClick event. (Inherited from Control .)
	OnMouseDown	(Inherited from UserControl .)
	OnMouseEnter	Raises the MouseEnter event. (Inherited from Control .)
	OnMouseHover	Raises the MouseHover event. (Inherited from Control .)
	OnMouseLeave	Raises the MouseLeave event. (Inherited from Control .)
	OnMouseMove	Raises the MouseMove event. (Inherited from Control .)
	OnMouseUp	Raises the MouseUp event. (Inherited from Control .)
	OnMouseWheel	Raises the MouseWheel event. (Inherited from ScrollableControl .)
	OnMove	Raises the Move event. (Inherited from Control .)
	OnNotifyMessage	Notifies the control of Windows messages. (Inherited from Control .)
	OnPaddingChanged	Raises the PaddingChanged event. (Inherited from ScrollableControl .)
	OnPaint	Raises the Paint event. (Inherited from Control .)
	OnPaintBackground	Paints the background of the control. (Inherited from ScrollableControl .)
	OnParentBackColorChanged	Raises the BackColorChanged event when the BackColor property value of the control's container changes.

		(Inherited from Control .)
	OnParentBackgroundImageChanged	Raises the BackgroundImageChanged event when the BackgroundImage property value of the control's container changes. (Inherited from Control .)
	OnParentBindingContextChanged	Raises the BindingContextChanged event when the BindingContext property value of the control's container changes. (Inherited from Control .)
	OnParentChanged	(Inherited from ContainerControl .)
	OnParentCursorChanged	Raises the CursorChanged event. (Inherited from Control .)
	OnParentEnabledChanged	Raises the EnabledChanged event when the Enabled property value of the control's container changes. (Inherited from Control .)
	OnParentFontChanged	Raises the FontChanged event when the Font property value of the control's container changes. (Inherited from Control .)
	OnParentForeColorChanged	Raises the ForeColorChanged event when the ForeColor property value of the control's container changes. (Inherited from Control .)
	OnParentRightToLeftChanged	Raises the RightToLeftChanged event when the RightToLeft property value of the control's container changes. (Inherited from Control .)
	OnParentVisibleChanged	Raises the VisibleChanged event when the Visible property value of the control's container changes.

		of the control's container ch (Inherited from Control .)
	OnPreviewKeyDown	Raises the PreviewKeyDov event. (Inherited from Control .)
	OnPrint	Raises the Paint event. (Inherited from Control .)
	OnQueryContinueDrag	Raises the QueryContinueI event. (Inherited from Control .)
	OnRegionChanged	Raises the RegionChanged (Inherited from Control .)
	OnResize	(Inherited from UserControc
	OnRightToLeftChanged	(Inherited from ScrollableControl .)
	OnScroll	Raises the Scroll event. (Inherited from ScrollableControl .)
	OnSizeChanged	Raises the SizeChanged ev (Inherited from Control .)
	OnStyleChanged	Raises the StyleChanged ev (Inherited from Control .)
	OnSystemColorsChanged	Raises the SystemColorsCh event. (Inherited from Control .)
	OnTabIndexChanged	Raises the TabIndexChange event. (Inherited from Control .)
	OnTabStopChanged	Raises the TabStopChange event. (Inherited from Control .)
	OnTextChanged	Raises the TextChanged ev (Inherited from Control .)
	OnValidated	Raises the Validated event. (Inherited from Control .)
		

	OnValidating	Raises the Validating event (Inherited from Control .)
	OnVisibleChanged	(Inherited from ScrollableControl .)
	PerformAutoScale	Performs scaling of the control and its children. (Inherited from ContainerControl .)
	PerformLayout()	Forces the control to apply logic to all its child controls. (Inherited from Control .)
	PerformLayout(Control, String)	Forces the control to apply logic to all its child controls. (Inherited from Control .)
	PointToClient	Computes the location of the specified screen point into client coordinates. (Inherited from Control .)
	PointToScreen	Computes the location of the specified client point into screen coordinates. (Inherited from Control .)
	PreProcessControlMessage	Preprocesses keyboard or input messages within the message before they are dispatched. (Inherited from Control .)
	PreProcessMessage	Preprocesses keyboard or input messages within the message before they are dispatched. (Inherited from Control .)
	ProcessCmdKey	(Inherited from ContainerControl .)
	ProcessDialogChar	(Inherited from ContainerControl .)
	ProcessDialogKey	(Inherited from ContainerControl .)

 ProcessKeyEventArgs	Processes a key message and generates the appropriate control events. (Inherited from Control .)
 ProcessKeyMessage	Processes a keyboard message. (Inherited from Control .)
 ProcessKeyPreview	Previews a keyboard message. (Inherited from Control .)
 ProcessMnemonic	(Inherited from ContainerControl .)
 ProcessTabKey	Selects the next available control and makes it the active control. (Inherited from ContainerControl .)
 RaiseDragEvent	Raises the appropriate drag event. (Inherited from Control .)
 RaiseKeyEvent	Raises the appropriate key event. (Inherited from Control .)
 RaiseMouseEvent	Raises the appropriate mouse event. (Inherited from Control .)
 RaisePaintEvent	Raises the appropriate paint event. (Inherited from Control .)
 RecreateHandle	Forces the re-creation of the window handle for the control. (Inherited from Control .)
 RectangleToClient	Computes the size and location of the specified screen rectangle in client coordinates. (Inherited from Control .)
 RectangleToScreen	Computes the size and location of the specified client rectangle in screen coordinates. (Inherited from Control .)
 Refresh	Forces the control to invalidate its client area and immediately repaint itself.

		redraw itself and any child controls. (Inherited from Control .)
	RemoveEvent	Removes an event from the calendar
	ResetBackColor	Resets the BackColor property to its default value. (Inherited from Control .)
	ResetBindings	Causes a control bound to a BindingSource to reread all items in the list and refresh displayed values. (Inherited from Control .)
	ResetCursor	Resets the Cursor property to its default value. (Inherited from Control .)
	ResetFont	Resets the Font property to its default value. (Inherited from Control .)
	ResetForeColor	Resets the ForeColor property to its default value. (Inherited from Control .)
	ResetImeMode	Resets the ImeMode property to its default value. (Inherited from Control .)
	ResetMouseEventArgs	Resets the control to handle the MouseLeave event. (Inherited from Control .)
	ResetRightToLeft	Resets the RightToLeft property to its default value. (Inherited from Control .)
	ResetText	Resets the Text property to its default value. (Inherited from Control .)
	ResumeLayout()	Resumes usual layout logic (Inherited from Control .)
		

	ResumeLayout(Boolean)	Resumes usual layout logic optionally forcing an immediate layout of pending layout requests. (Inherited from Control .)
	RtlTranslateAlignment(HorizontalAlignment)	Converts the specified HorizontalAlignment to the appropriate HorizontalAlignment to support right-to-left text. (Inherited from Control .)
	RtlTranslateAlignment(LeftRightAlignment)	Converts the specified LeftRightAlignment to the appropriate LeftRightAlignment to support right-to-left text. (Inherited from Control .)
	RtlTranslateAlignment(ContentAlignment)	Converts the specified ContentAlignment to the appropriate ContentAlignment to support right-to-left text. (Inherited from Control .)
	RtlTranslateContent	Converts the specified ContentAlignment to the appropriate ContentAlignment to support right-to-left text. (Inherited from Control .)
	RtlTranslateHorizontal	Converts the specified HorizontalAlignment to the appropriate HorizontalAlignment to support right-to-left text. (Inherited from Control .)
	RtlTranslateLeftRight	Converts the specified LeftRightAlignment to the appropriate LeftRightAlignment to support right-to-left text. (Inherited from Control .)
	Scale(Single)	Obsolete. Scales the control and any child controls.

		(Inherited from Control .)
	Scale(SizeF)	Scales the control and all child controls by the specified scale factor. (Inherited from Control .)
	Scale(Single, Single)	Obsolete. Scales the entire control and child controls. (Inherited from Control .)
	ScaleControl	(Inherited from ScrollableControl .)
	ScaleCore	(Inherited from ScrollableControl .)
	ScrollControlIntoView	Scrolls the specified child control into view on an auto-scroll enabled control. (Inherited from ScrollableControl .)
	ScrollToControl	Calculates the scroll offset for the specified child control. (Inherited from ScrollableControl .)
	Select()	Activates the control. (Inherited from Control .)
	Select(Boolean, Boolean)	(Inherited from ContainerControl .)
	SelectNextControl	Activates the next control. (Inherited from Control .)
	SendToBack	Sends the control to the back of the z-order. (Inherited from Control .)
	SetAutoScrollMargin	Sets the size of the auto-scroll margins. (Inherited from ScrollableControl .)
	SetAutoSizeMode	Sets a value indicating how

		control will behave when it AutoSize property is enable (Inherited from Control .)
	SetBounds(Int32, Int32, Int32, Int32)	Sets the bounds of the control to the specified location and size. (Inherited from Control .)
	SetBounds(Int32, Int32, Int32, Int32, BoundsSpecified)	Sets the specified bounds of the control to the specified location and size. (Inherited from Control .)
	SetBoundsCore	Performs the work of setting the specified bounds of this control. (Inherited from Control .)
	SetClientSizeCore	Sets the size of the client area of the control. (Inherited from Control .)
	SetDisplayRectLocation	Positions the display window to the specified value. (Inherited from ScrollableControl .)
	SetScrollState	Sets the specified scroll state. (Inherited from ScrollableControl .)
	SetStyle	Sets a specified ControlStyle to either true or false. (Inherited from Control .)
	SetTopLevel	Sets the control as the top-level control. (Inherited from Control .)
	SetVisibleCore	Sets the control to the specified visible state. (Inherited from Control .)
	Show	Displays the control to the user. (Inherited from Control .)
	SizeFromClientSize	Determines the size of the control from the height and width of the client area.

		of its client area. (Inherited from Control .)
	SuspendLayout	Temporarily suspends the layout logic for the control. (Inherited from Control .)
	ToString	Returns a String containing name of the Component , if applicable. This method should not be overridden. (Inherited from Component .)
	Update	Causes the control to redraw invalidated regions within its client area. (Inherited from Control .)
	UpdateBounds()	Updates the bounds of the control with the current size and location. (Inherited from Control .)
	UpdateBounds(Int32, Int32, Int32, Int32)	Updates the bounds of the control with the specified size and location. (Inherited from Control .)
	UpdateBounds(Int32, Int32, Int32, Int32, Int32, Int32)	Updates the bounds of the control with the specified size, location, and client size. (Inherited from Control .)
	UpdateDefaultButton	When overridden by a derived class, updates which button is the default button. (Inherited from ContainerControl .)
	UpdateStyles	Forces the assigned styles to be reapplied to the control. (Inherited from Control .)
	UpdateZOrder	Updates the control in its parent's z-order. (Inherited from Control .)
		

	Validate()	Verifies the value of the control that is losing focus by causing the Validating and Validated events to occur, in that order. (Inherited from ContainerControl .)
◆	Validate(Boolean)	Verifies the value of the control that is losing focus; conditionally dependent on whether automatic validation is turned on. (Inherited from ContainerControl .)
◆	ValidateChildren()	(Inherited from UserControl .)
◆	ValidateChildren(ValidationConstraints)	(Inherited from UserControl .)
◆	WndProc	(Inherited from UserControl .)

▣ Properties

	Name	Description
	AccessibilityObject	Gets the AccessibleObject assigned to the control. (Inherited from Control .)
	AccessibleDefaultActionDescription	Gets or sets the default action description of the control for use by accessibility client applications. (Inherited from Control .)
	AccessibleDescription	Gets or sets the description of the control used by accessibility client applications. (Inherited from Control .)
	AccessibleName	Gets or sets the name of the control used by accessibility client applications. (Inherited from Control .)
	AccessibleRole	Gets or sets the accessible role of the control (Inherited from Control .)
	ActiveControl	Gets or sets the active control on the container control. (Inherited from ContainerControl .)
	AllowDrop	Gets or sets a value indicating whether the control can accept data that the user drags onto it. (Inherited from Control .)
	AllowEditingEvents	Indicates whether events can be right-clicked and edited
	Anchor	Gets or sets the edges of the container to which a control is bound and determines how a control is resized with its parent.

		(Inherited from Control .)
	AutoScaleDimensions	Gets or sets the dimensions that the control was designed to. (Inherited from ContainerControl .)
	AutoScaleFactor	Gets the scaling factor between the current and design-time automatic scaling dimensions. (Inherited from ContainerControl .)
	AutoScaleMode	Gets or sets the automatic scaling mode of the control. (Inherited from ContainerControl .)
	AutoScroll	Gets or sets a value indicating whether the container enables the user to scroll to any controls placed outside of its visible boundaries. (Inherited from ScrollableControl .)
	AutoScrollMargin	Gets or sets the size of the auto-scroll margin. (Inherited from ScrollableControl .)
	AutoScrollMinSize	Gets or sets the minimum size of the auto-scroll. (Inherited from ScrollableControl .)
	AutoScrollOffset	Gets or sets where this control is scrolled to in ScrollControlIntoView(Control) . (Inherited from Control .)
	AutoScrollPosition	Gets or sets the location of the auto-scroll position. (Inherited from ScrollableControl .)

 AutoSize	(Inherited from UserControl .)
 AutoSizeMode	Gets or sets how the control will resize itself. (Inherited from UserControl .)
 AutoValidate	Gets or sets how the control performs validation when the user changes focus to another control. (Inherited from UserControl .)
 BackColor	Gets or sets the background color for the control. (Inherited from Control .)
 BackgroundImage	Gets or sets the background image displayed in the control. (Inherited from Control .)
 BackgroundImageLayout	Gets or sets the background image layout as defined in the ImageLayout enumeration. (Inherited from Control .)
 BindingContext	(Inherited from ContainerControl .)
 BorderStyle	Gets or sets the border style of the user control. (Inherited from UserControl .)
 Bottom	Gets the distance, in pixels, between the bottom edge of the control and the top edge of its container's client area. (Inherited from Control .)
 Bounds	Gets or sets the size and location of the control including its nonclient elements, in pixels, relative to the parent control. (Inherited from Control .)
 CalendarDate	The Date that the calendar is currently showing
	

	CalendarView	Indicates the type of calendar to render, Month or Day view
	CanEnableIme	Gets a value indicating whether the ImeMode property can be set to an active value, to enable IME support. (Inherited from ContainerControl .)
	CanFocus	Gets a value indicating whether the control can receive focus. (Inherited from Control .)
	CanRaiseEvents	Determines if events can be raised on the control. (Inherited from Control .)
	CanSelect	Gets a value indicating whether the control can be selected. (Inherited from Control .)
	Capture	Gets or sets a value indicating whether the control has captured the mouse. (Inherited from Control .)
	CausesValidation	Gets or sets a value indicating whether the control causes validation to be performed on any controls that require validation when it receives focus. (Inherited from Control .)
	ClientRectangle	Gets the rectangle that represents the client area of the control. (Inherited from Control .)
	ClientSize	Gets or sets the height and width of the client area of the control. (Inherited from Control .)
	CompanyName	Gets the name of the company or creator of the application

		containing the control. (Inherited from Control .)
	Container	Gets the IContainer that contains the Component . (Inherited from Component .)
	ContainsFocus	Gets a value indicating whether the control, or one of its child controls, currently has the input focus. (Inherited from Control .)
	ContextMenu	Gets or sets the shortcut menu associated with the control. (Inherited from Control .)
	ContextMenuStrip	Gets or sets the ContextMenuStrip associated with this control. (Inherited from Control .)
	Controls	Gets the collection of controls contained within the control. (Inherited from Control .)
	Created	Gets a value indicating whether the control has been created. (Inherited from Control .)
	CreateParams	(Inherited from UserControl .)
	CurrentAutoScaleDimensions	Gets the current run-time dimensions of the screen. (Inherited from ContainerControl .)
	Cursor	Gets or sets the cursor that is displayed when the mouse pointer is over the control. (Inherited from Control .)
	DataBindings	Gets the data bindings for the control. (Inherited from Control .)
	DateHeaderFont	Get or Set this value to the Font

		you wish to use to render the date in the upper right corner
	DayOfWeekFont	The font used to render the days of the week text
	DaysFont	The font used to render the number days on the calendar
	DayViewTimeFont	Indicates the font for the times on the day view
	DefaultCursor	Gets or sets the default cursor for the control. (Inherited from Control .)
	DefaultImeMode	Gets the default Input Method Editor (IME) mode supported by the control. (Inherited from Control .)
	DefaultMargin	Gets the space, in pixels, that is specified by default between controls. (Inherited from Control .)
	DefaultMaximumSize	Gets the length and height, in pixels, that is specified as the default maximum size of a control. (Inherited from Control .)
	DefaultMinimumSize	Gets the length and height, in pixels, that is specified as the default minimum size of a control. (Inherited from Control .)
	DefaultPadding	Gets the internal spacing, in pixels, of the contents of a control. (Inherited from Control .)
	DefaultSize	(Inherited from UserControl .)
	DesignMode	Gets a value that indicates whether the Component is

		currently in design mode. (Inherited from Component .)
	DimDisabledEvents	Indicates whether disabled events will appear as "dimmed". This property is only used if ShowDisabledEvents is set to true.
	DisplayRectangle	Gets the rectangle that represents the virtual display area of the control. (Inherited from ScrollableControl .)
	Disposing	Gets a value indicating whether the base Control class is in the process of disposing. (Inherited from Control .)
	Dock	Gets or sets which control borders are docked to its parent control and determines how a control is resized with its parent. (Inherited from Control .)
	DockPadding	Gets the dock padding settings for all edges of the control. (Inherited from ScrollableControl .)
	DoubleBuffered	Gets or sets a value indicating whether this control should redraw its surface using a secondary buffer to reduce or prevent flicker. (Inherited from Control .)
	Enabled	Gets or sets a value indicating whether the control can respond to user interaction. (Inherited from Control .)
	Events	Gets the list of event handlers that are attached to this

		Component . (Inherited from Component .)
	Focused	Gets a value indicating whether the control has input focus. (Inherited from Control .)
	Font	Gets or sets the font of the text displayed by the control. (Inherited from Control .)
	FontHeight	Gets or sets the height of the font of the control. (Inherited from Control .)
	ForeColor	Gets or sets the foreground color of the control. (Inherited from Control .)
	Handle	Gets the window handle that the control is bound to. (Inherited from Control .)
	HasChildren	Gets a value indicating whether the control contains one or more child controls. (Inherited from Control .)
	Height	Gets or sets the height of the control. (Inherited from Control .)
	HighlightCurrentDay	Indicates whether today's date should be highlighted
	HorizontalScroll	Gets the characteristics associated with the horizontal scroll bar. (Inherited from ScrollableControl .)
	HScroll	Gets or sets a value indicating whether the horizontal scroll bar is visible. (Inherited from ScrollableControl .)
		

	ImeMode	Gets or sets the Input Method Editor (IME) mode of the control. (Inherited from Control .)
	ImeModeBase	Gets or sets the IME mode of a control. (Inherited from Control .)
	InvokeRequired	Gets a value indicating whether the caller must call an invoke method when making method calls to the control because the caller is on a different thread than the one the control was created on. (Inherited from Control .)
	IsAccessible	Gets or sets a value indicating whether the control is visible to accessibility applications. (Inherited from Control .)
	IsDisposed	Gets a value indicating whether the control has been disposed of. (Inherited from Control .)
	IsHandleCreated	Gets a value indicating whether the control has a handle associated with it. (Inherited from Control .)
	IsMirrored	Gets a value indicating whether the control is mirrored. (Inherited from Control .)
	LayoutEngine	Gets a cached instance of the control's layout engine. (Inherited from Control .)
	Left	Gets or sets the distance, in pixels, between the left edge of the control and the left edge of its container's client area. (Inherited from Control .)

 LoadPresetHolidays	Indicates whether Federal Holidays are automatically preloaded onto the calendar
 Location	Gets or sets the coordinates of the upper-left corner of the control relative to the upper-left corner of its container. (Inherited from Control .)
 Margin	Gets or sets the space between controls. (Inherited from Control .)
 MaximumSize	Gets or sets the size that is the upper limit that GetPreferredSize(Size) can specify. (Inherited from Control .)
 MinimumSize	Gets or sets the size that is the lower limit that GetPreferredSize(Size) can specify. (Inherited from Control .)
 Name	Gets or sets the name of the control. (Inherited from Control .)
 Padding	Gets or sets padding within the control. (Inherited from Control .)
 Parent	Gets or sets the parent container of the control. (Inherited from Control .)
 ParentForm	Gets the form that the container control is assigned to. (Inherited from ContainerControl .)
 PreferredSize	Gets the size of a rectangular area into which the control can fit.

		(Inherited from Control .)
	ProductName	Gets the product name of the assembly containing the control. (Inherited from Control .)
	ProductVersion	Gets the version of the assembly containing the control. (Inherited from Control .)
	RecreatingHandle	Gets a value indicating whether the control is currently re-creating its handle. (Inherited from Control .)
	Region	Gets or sets the window region associated with the control. (Inherited from Control .)
	RenderRightToLeft	Obsolete. This property is now obsolete. (Inherited from Control .)
	ResizeRedraw	Gets or sets a value indicating whether the control redraws itself when resized. (Inherited from Control .)
	Right	Gets the distance, in pixels, between the right edge of the control and the left edge of its container's client area. (Inherited from Control .)
	RightToLeft	Gets or sets a value indicating whether control's elements are aligned to support locales using right-to-left fonts. (Inherited from Control .)
	ScaleChildren	Gets a value that determines the scaling of child controls. (Inherited from Control .)
	ShowArrowControls	Indicates whether the calendar control should render the

		previous/next month buttons
	ShowDashedBorderOnDisabledEvents	Indicates if a dashed border should show up around disabled events. This property is only used if ShowDisabledEvents is set to true.
	ShowDateInHeader	Indicates whether the date should be displayed in the upper right hand corner of the calendar control
	ShowDisabledEvents	Indicates whether disabled events should show up on the calendar control
	ShowEventTooltips	Indicates whether hovering over an event will display a tooltip of the event
	ShowFocusCues	Gets a value indicating whether the control should display focus rectangles. (Inherited from Control .)
	ShowKeyboardCues	Gets a value indicating whether the user interface is in the appropriate state to show or hide keyboard accelerators. (Inherited from Control .)
	ShowTodayButton	Indicates whether the calendar control should render the Today button
	Site	Gets or sets the site of the control. (Inherited from Control .)
	Size	Gets or sets the height and width of the control. (Inherited from Control .)
	TabIndex	Gets or sets the tab order of the control within its container.

		(Inherited from Control .)
	TabStop	Gets or sets a value indicating whether the user can give the focus to this control using the TAB key. (Inherited from Control .)
	Tag	Gets or sets the object that contains data about the control. (Inherited from Control .)
	Text	(Inherited from UserControl .)
	TodayFont	The font used to render the Today button
	Top	Gets or sets the distance, in pixels, between the top edge of the control and the top edge of its container's client area. (Inherited from Control .)
	TopLevelControl	Gets the parent control that is not parented by another Windows Forms control. Typically, this is the outermost Form that the control is contained in. (Inherited from Control .)
	UseWaitCursor	Gets or sets a value indicating whether to use the wait cursor for the current control and all child controls. (Inherited from Control .)
	VerticalScroll	Gets the characteristics associated with the vertical scroll bar. (Inherited from ScrollableControl .)
	Visible	Gets or sets a value indicating whether the control and all its child controls are displayed.

		(Inherited from Control .)
	VScroll	Gets or sets a value indicating whether the vertical scroll bar is visible. (Inherited from ScrollableControl .)
	Width	Gets or sets the width of the control. (Inherited from Control .)
	WindowTarget	This property is not relevant for this class. (Inherited from Control .)

▣ Events

	Name	Description
	AutoSizeChanged	Occurs when the AutoSize property changes. (Inherited from UserControl .)
	AutoValidateChanged	Occurs when the AutoValidate property changes. (Inherited from UserControl .)
	BackColorChanged	Occurs when the value of the BackColor property changes. (Inherited from Control .)
	BackgroundImageChanged	Occurs when the value of the BackgroundImage property changes. (Inherited from Control .)
	BackgroundImageLayoutChanged	Occurs when the BackgroundImageLayout property changes. (Inherited from Control .)
	BindingContextChanged	Occurs when the value of the BindingContext property changes. (Inherited from Control .)
	CausesValidationChanged	Occurs when the value of the CausesValidation property changes. (Inherited from Control .)
	ChangeUICues	Occurs when the focus or keyboard user interface (UI) cues change. (Inherited from Control .)
	Click	Occurs when the control is clicked. (Inherited from Control .)
	ClientSizeChanged	Occurs when the value of the

		ClientSize property changes. (Inherited from Control .)
	ContextMenuChanged	Occurs when the value of the ContextMenu property changes. (Inherited from Control .)
	ContextMenuStripChanged	Occurs when the value of the ContextMenuStrip property changes. (Inherited from Control .)
	ControlAdded	Occurs when a new control is added to the Control.ControlCollection . (Inherited from Control .)
	ControlRemoved	Occurs when a control is removed from the Control.ControlCollection . (Inherited from Control .)
	CursorChanged	Occurs when the value of the Cursor property changes. (Inherited from Control .)
	Disposed	Occurs when the component is disposed by a call to the Dispose() method. (Inherited from Component .)
	DockChanged	Occurs when the value of the Dock property changes. (Inherited from Control .)
	DoubleClick	Occurs when the control is double-clicked. (Inherited from Control .)
	DragDrop	Occurs when a drag-and-drop operation is completed. (Inherited from Control .)
	DragEnter	Occurs when an object is dragged into the control's bounds.

		(Inherited from Control.)
	DragLeave	Occurs when an object is dragged out of the control's bounds. (Inherited from Control.)
	DragOver	Occurs when an object is dragged over the control's bounds. (Inherited from Control.)
	EnabledChanged	Occurs when the Enabled property value has changed. (Inherited from Control.)
	Enter	Occurs when the control is entered. (Inherited from Control.)
	FontChanged	Occurs when the Font property value changes. (Inherited from Control.)
	ForeColorChanged	Occurs when the ForeColor property value changes. (Inherited from Control.)
	GiveFeedback	Occurs during a drag operation. (Inherited from Control.)
	GotFocus	Occurs when the control receives focus. (Inherited from Control.)
	HandleCreated	Occurs when a handle is created for the control. (Inherited from Control.)
	HandleDestroyed	Occurs when the control's handle is in the process of being destroyed. (Inherited from Control.)
	HelpRequested	Occurs when the user requests help for a control. (Inherited from Control.)
		

	ImeModeChanged	Occurs when the ImeMode property has changed. (Inherited from Control .)
	Invalidated	Occurs when a control's display requires redrawing. (Inherited from Control .)
	KeyDown	Occurs when a key is pressed while the control has focus. (Inherited from Control .)
	KeyPress	Occurs when a key is pressed while the control has focus. (Inherited from Control .)
	KeyUp	Occurs when a key is released while the control has focus. (Inherited from Control .)
	Layout	Occurs when a control should reposition its child controls. (Inherited from Control .)
	Leave	Occurs when the input focus leaves the control. (Inherited from Control .)
	Load	Occurs before the control becomes visible for the first time. (Inherited from UserControl .)
	LocationChanged	Occurs when the Location property value has changed. (Inherited from Control .)
	LostFocus	Occurs when the control loses focus. (Inherited from Control .)
	MarginChanged	Occurs when the control's margin changes. (Inherited from Control .)
	MouseCaptureChanged	Occurs when the control loses or gains mouse capture.

		(Inherited from Control .)
	MouseClicked	Occurs when the control is clicked by the mouse. (Inherited from Control .)
	MouseDown	Occurs when the mouse pointer is over the control and a mouse button is pressed. (Inherited from Control .)
	MouseEnter	Occurs when the mouse pointer enters the control. (Inherited from Control .)
	MouseHover	Occurs when the mouse pointer rests on the control. (Inherited from Control .)
	MouseLeave	Occurs when the mouse pointer leaves the control. (Inherited from Control .)
	MouseMove	Occurs when the mouse pointer is moved over the control. (Inherited from Control .)
	MouseUp	Occurs when the mouse pointer is over the control and a mouse button is released. (Inherited from Control .)
	MouseWheel	Occurs when the mouse wheel moves while the control has focus. (Inherited from Control .)
	Move	Occurs when the control is moved. (Inherited from Control .)
	PaddingChanged	Occurs when the control's padding changes.

		(Inherited from Control .)
	Paint	Occurs when the control is redrawn. (Inherited from Control .)
	ParentChanged	Occurs when the Parent property value changes. (Inherited from Control .)
	PreviewKeyDown	Occurs before the KeyDown event when a key is pressed while focus is on this control. (Inherited from Control .)
	QueryAccessibilityHelp	Occurs when AccessibleObject is providing help to accessibility applications. (Inherited from Control .)
	QueryContinueDrag	Occurs during a drag-and-drop operation and enables the drag source to determine whether the drag-and-drop operation should be canceled. (Inherited from Control .)
	RegionChanged	Occurs when the value of the Region property changes. (Inherited from Control .)
	Resize	Occurs when the control is resized. (Inherited from Control .)
	RightToLeftChanged	Occurs when the RightToLeft property value changes. (Inherited from Control .)
	Scroll	Occurs when the user or code scrolls through the client area. (Inherited from ScrollableControl .)
	SizeChanged	Occurs when the Size property value changes.

		(Inherited from Control .)
	StyleChanged	Occurs when the control style changes. (Inherited from Control .)
	SystemColorsChanged	Occurs when the system colors change. (Inherited from Control .)
	TabIndexChanged	Occurs when the TabIndex property value changes. (Inherited from Control .)
	TabStopChanged	Occurs when the TabStop property value changes. (Inherited from Control .)
	TextChanged	(Inherited from UserControl .)
	Validated	Occurs when the control is finished validating. (Inherited from Control .)
	Validating	Occurs when the control is validating. (Inherited from Control .)
	VisibleChanged	Occurs when the Visible property value changes. (Inherited from Control .)

Calendar Constructor

Namespace: [Calendar.NET](#)

Assembly: Calendar.NET (in Calendar.NET.dll) Version: 1.0.0.0 (1.0.0.0)

☰ Syntax

C#

```
public Calendar()
```

Visual Basic

```
Public Sub New
```

Visual C++

```
public:  
Calendar()
```

Calendar Methods

[Calendar Class](#) [See Also](#) [Send Feedback](#)

The [Calendar](#) type exposes the following members.

Methods

	Name	Description
	AccessibilityNotifyClients(AccessibleEvents, Int32)	Notifies the accessibility client applications of the specified AccessibleEvents for the specified child control. (Inherited from Control .)
	AccessibilityNotifyClients(AccessibleEvents, Int32, Int32)	Notifies the accessibility client applications of the specified AccessibleEvents for the specified child control. (Inherited from Control .)
	AddEvent	Adds an event to the calendar. (Inherited from ContainerControl .)
	AdjustFormScrollbars	 (Inherited from ContainerControl .)
	BeginInvoke(Delegate)	Executes the specified delegate asynchronously on the thread that the control's underlying handle was created on. (Inherited from Control .)
	BeginInvoke(Delegate, Object[])	Executes the specified delegate asynchronously with the specified arguments, on the thread that the control's underlying handle was created on. (Inherited from Control .)
	BringToFront	Brings the control to the front of the z-order. (Inherited from Control .)
	Contains	Retrieves a value indicating whether the specified control is a child of the control. (Inherited from Control .)
	CreateAccessibilityInstance	Creates a new accessibility instance for the control.

		(Inherited from Control .)
	CreateControl	Forces the creation of the control, including the creation of the window handle and any child controls. (Inherited from Control .)
	CreateControlsInstance	Creates a new instance of the control collection for the control. (Inherited from Control .)
	CreateGraphics	Creates the Graphics for the control. (Inherited from Control .)
	CreateHandle	Creates a handle for the control. (Inherited from Control .)
	CreateObjRef	Creates an object that contains the relevant information required to generate a proxy used to communicate with a remote object. (Inherited from MarshalByRefObject .)
	DefWndProc	Sends the specified message to the default window procedure. (Inherited from Control .)
	DestroyHandle	Destroys the handle associated with the control. (Inherited from Control .)
	Dispose()	Releases all resources used by the Component . (Inherited from Component .)
	Dispose(Boolean)	(Inherited from ContainerControl .)
	DoDragDrop	Begins a drag-and-drop operation. (Inherited from Control .)
	DrawToBitmap	Supports rendering to the specified bitmap. (Inherited from Control .)
		

	EndInvoke	Retrieves the return value of an asynchronous operation represented by the IAsyncResult passed. (Inherited from Control .)
=	Equals	Determines whether the specified Object is equal to the current Object . (Inherited from Object .)
💡	Finalize	Releases unmanaged resources and performs other cleanup operations before the Component is reclaimed by garbage collection. (Inherited from Component .)
=	FindForm	Retrieves the form that the control is on. (Inherited from Control .)
=	Focus	Sets input focus to the control. (Inherited from Control .)
💡	GetAccessibilityObjectById	Retrieves the specified AccessibleObject . (Inherited from Control .)
💡	GetAutoSizeMode	Retrieves a value indicating how the control will behave when its AutoSize property is enabled. (Inherited from Control .)
=	GetChildAtPoint(Point)	Retrieves the child control located at the specified coordinates. (Inherited from Control .)
=	GetChildAtPoint(Point, GetChildAtPointSkip)	Retrieves the child control located at the specified coordinates, specifying whether to ignore child controls of a certain type. (Inherited from Control .)

 GetContainerControl	Returns the next ContainerControl up the control's chain of parent controls. (Inherited from Control .)
 GetHashCode	Serves as a hash function for a particular type. (Inherited from Object .)
 GetLifetimeService	Retrieves the current lifetime service object that controls lifetime policy for this instance. (Inherited from MarshalByRefObject .)
 GetNextControl	Retrieves the next control forward or back in the tab order of child controls. (Inherited from Control .)
 GetPreferredSize	Retrieves the size of a rectangular area into which a control can be fitted. (Inherited from Control .)
 GetScaledBounds	Retrieves the bounds within which the control is scaled. (Inherited from Control .)
 GetScrollState	Determines whether the specified scroll flag has been set. (Inherited from ScrollableControl .)
 GetService	Returns an object that represents the service provided by the Component or by its Container . (Inherited from Component .)
 GetStyle	Retrieves the value of the specified control style bit for this control. (Inherited from Control .)
 GetTopLevel	Determines if the control is a top-level control.

		(Inherited from Control .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	Hide	Conceals the control from the user. (Inherited from Control .)
	InitializeLifetimeService	Obtains a lifetime service object to control the lifetime policy for this instance. (Inherited from MarshalByRefObject .)
	InitLayout	Called after the control has been added to another container. (Inherited from Control .)
	Invalidate()	Invalidates the entire surface of the control and causes the control to be redrawn. (Inherited from Control .)
	Invalidate(Region)	Invalidates the specified region of the control (adds it to the control's update region, which is the region that will be repainted at the next paint operation), and causes a paint message to be sent to the control. (Inherited from Control .)
	Invalidate(Boolean)	Invalidates a specific region of the control and causes a paint message to be sent to the control. Optionally, invalidates the control and all controls assigned to the control. (Inherited from Control .)
	Invalidate(Rectangle)	Invalidates the specified region of the control (adds it to the control's update region, which is the region that will be repainted at the

		<p>paint operation), and causes paint message to be sent to control. (Inherited from Control.)</p>
	Invalidate(Region, Boolean)	<p>Invalidates the specified region of the control (adds it to the current update region, which is the region that will be repainted at the next paint operation), and causes a paint message to be sent to the control. Optionally, invalidates the child controls assigned to the control. (Inherited from Control.)</p>
	Invalidate(Rectangle, Boolean)	<p>Invalidates the specified region of the control (adds it to the current update region, which is the region that will be repainted at the next paint operation), and causes a paint message to be sent to the control. Optionally, invalidates the child controls assigned to the control. (Inherited from Control.)</p>
	Invoke(Delegate)	<p>Executes the specified delegate on the thread that owns the control's underlying window handle. (Inherited from Control.)</p>
	Invoke(Delegate, Object[])	<p>Executes the specified delegate on the thread that owns the control's underlying window handle, with the specified list of arguments. (Inherited from Control.)</p>
	InvokeGotFocus	<p>Raises the GotFocus event on the specified control. (Inherited from Control.)</p>
		

	InvokeLostFocus	Raises the LostFocus event specified control. (Inherited from Control .)
	InvokeOnClick	Raises the Click event for the specified control. (Inherited from Control .)
	InvokePaint	Raises the Paint event for the specified control. (Inherited from Control .)
	InvokePaintBackground	Raises the PaintBackground event for the specified control. (Inherited from Control .)
	IsInputChar	Determines if a character is an input character that the control recognizes. (Inherited from Control .)
	IsInputKey	Determines whether the specified key is a regular input key or a special key that requires preprocessing. (Inherited from Control .)
	MemberwiseClone()	Creates a shallow copy of the current Object . (Inherited from Object .)
	MemberwiseClone(Boolean)	Creates a shallow copy of the current MarshalByRefObject object. (Inherited from MarshalByRefObject .)
	NotifyInvalidate	Raises the Invalidated event for a specified region of the control. (Inherited from Control .)
	OnAutoSizeChanged	Raises the AutoSizeChanged event. (Inherited from Control .)
		

	OnAutoValidateChanged	Raises the AutoValidateCh event. (Inherited from ContainerControl .)
	OnBackColorChanged	Raises the BackColorChan event. (Inherited from Control .)
	OnBackgroundImageChanged	Raises the BackgroundImageChanged event. (Inherited from Control .)
	OnBackgroundImageLayoutChanged	Raises the BackgroundImageLayoutC event. (Inherited from Control .)
	OnBindingContextChanged	Raises the BindingContextChanged ev (Inherited from Control .)
	OnCausesValidationChanged	Raises the CausesValidationChanged e (Inherited from Control .)
	OnChangeUICues	Raises the ChangeUICues e (Inherited from Control .)
	OnClick	Raises the Click event. (Inherited from Control .)
	OnClientSizeChanged	Raises the ClientSizeChang event. (Inherited from Control .)
	OnContextMenuChanged	Raises the ContextMenuCh event. (Inherited from Control .)
	OnContextMenuStripChanged	Raises the ContextMenuStripChanged event. (Inherited from Control .)
	OnControlAdded	Raises the ControlAdded ev (Inherited from Control .)
	OnControlRemoved	Raises the ControlRemove

		event. (Inherited from Control .)
 OnCreateControl		Raises the CreateControl event. (Inherited from UserControl .)
 OnCursorChanged		Raises the CursorChanged event. (Inherited from Control .)
 OnDockChanged		Raises the DockChanged event. (Inherited from Control .)
 OnDoubleClick		Raises the DoubleClick event. (Inherited from Control .)
 OnDragDrop		Raises the DragDrop event. (Inherited from Control .)
 OnDragEnter		Raises the DragEnter event. (Inherited from Control .)
 OnDragLeave		Raises the DragLeave event. (Inherited from Control .)
 OnDragOver		Raises the DragOver event. (Inherited from Control .)
 OnEnabledChanged		Raises the EnabledChanged event. (Inherited from Control .)
 OnEnter		Raises the Enter event. (Inherited from Control .)
 OnFontChanged		Raises the FontChanged event. (Inherited from ContainerControl .)
 OnForeColorChanged		Raises the ForeColorChanged event. (Inherited from Control .)
 OnGiveFeedback		Raises the GiveFeedback event. (Inherited from Control .)
 OnGotFocus		Raises the GotFocus event. (Inherited from Control .)
 OnHandleCreated		Raises the HandleCreated event. (Inherited from Control .)

 OnHandleDestroyed	Raises the HandleDestroyed event. (Inherited from Control .)
 OnHelpRequested	Raises the HelpRequested event. (Inherited from Control .)
 OnImeModeChanged	Raises the ImeModeChanged event. (Inherited from Control .)
 OnInvalidated	Raises the Invalidated event. (Inherited from Control .)
 OnKeyDown	Raises the KeyDown event. (Inherited from Control .)
 OnKeyPress	Raises the KeyPress event. (Inherited from Control .)
 OnKeyUp	Raises the KeyUp event. (Inherited from Control .)
 OnLayout	Raises the Layout event. (Inherited from ContainerControl .)
 OnLeave	Raises the Leave event. (Inherited from Control .)
 OnLoad	Raises the Load event. (Inherited from UserControl .)
 OnLocationChanged	Raises the LocationChanged event. (Inherited from Control .)
 OnLostFocus	Raises the LostFocus event. (Inherited from Control .)
 OnMarginChanged	Raises the MarginChanged event. (Inherited from Control .)
 OnMouseCaptureChanged	Raises the MouseCaptureChanged event. (Inherited from Control .)
 OnMouseClicked	Raises the MouseClicked event. (Inherited from Control .)
	

	OnMouseDoubleClick	Raises the MouseDoubleClick event. (Inherited from Control .)
	OnMouseDown	(Inherited from UserControl .)
	OnMouseEnter	Raises the MouseEnter event. (Inherited from Control .)
	OnMouseHover	Raises the MouseHover event. (Inherited from Control .)
	OnMouseLeave	Raises the MouseLeave event. (Inherited from Control .)
	OnMouseMove	Raises the MouseMove event. (Inherited from Control .)
	OnMouseUp	Raises the MouseUp event. (Inherited from Control .)
	OnMouseWheel	Raises the MouseWheel event. (Inherited from ScrollableControl .)
	OnMove	Raises the Move event. (Inherited from Control .)
	OnNotifyMessage	Notifies the control of Windows messages. (Inherited from Control .)
	OnPaddingChanged	Raises the PaddingChanged event. (Inherited from ScrollableControl .)
	OnPaint	Raises the Paint event. (Inherited from Control .)
	OnPaintBackground	Paints the background of the control. (Inherited from ScrollableControl .)
	OnParentBackColorChanged	Raises the BackColorChanged event when the BackColor property value of the control's container changes.

		(Inherited from Control .)
	OnParentBackgroundImageChanged	Raises the BackgroundImageChanged event when the BackgroundImage property value of the control's container changes. (Inherited from Control .)
	OnParentBindingContextChanged	Raises the BindingContextChanged event when the BindingContext property value of the control's container changes. (Inherited from Control .)
	OnParentChanged	(Inherited from ContainerControl .)
	OnParentCursorChanged	Raises the CursorChanged event. (Inherited from Control .)
	OnParentEnabledChanged	Raises the EnabledChanged event when the Enabled property value of the control's container changes. (Inherited from Control .)
	OnParentFontChanged	Raises the FontChanged event when the Font property value of the control's container changes. (Inherited from Control .)
	OnParentForeColorChanged	Raises the ForeColorChanged event when the ForeColor property value of the control's container changes. (Inherited from Control .)
	OnParentRightToLeftChanged	Raises the RightToLeftChanged event when the RightToLeft property value of the control's container changes. (Inherited from Control .)
	OnParentVisibleChanged	Raises the VisibleChanged event when the Visible property value of the control's container changes.

		of the control's container ch (Inherited from Control .)
	OnPreviewKeyDown	Raises the PreviewKeyDov event. (Inherited from Control .)
	OnPrint	Raises the Paint event. (Inherited from Control .)
	OnQueryContinueDrag	Raises the QueryContinueI event. (Inherited from Control .)
	OnRegionChanged	Raises the RegionChanged (Inherited from Control .)
	OnResize	(Inherited from UserControc
	OnRightToLeftChanged	(Inherited from ScrollableControl .)
	OnScroll	Raises the Scroll event. (Inherited from ScrollableControl .)
	OnSizeChanged	Raises the SizeChanged ev (Inherited from Control .)
	OnStyleChanged	Raises the StyleChanged ev (Inherited from Control .)
	OnSystemColorsChanged	Raises the SystemColorsCh event. (Inherited from Control .)
	OnTabIndexChanged	Raises the TabIndexChange event. (Inherited from Control .)
	OnTabStopChanged	Raises the TabStopChange event. (Inherited from Control .)
	OnTextChanged	Raises the TextChanged ev (Inherited from Control .)
	OnValidated	Raises the Validated event. (Inherited from Control .)
		

	OnValidating	Raises the Validating event (Inherited from Control .)
	OnVisibleChanged	(Inherited from ScrollableControl .)
	PerformAutoScale	Performs scaling of the control and its children. (Inherited from ContainerControl .)
	PerformLayout()	Forces the control to apply logic to all its child controls. (Inherited from Control .)
	PerformLayout(Control, String)	Forces the control to apply logic to all its child controls. (Inherited from Control .)
	PointToClient	Computes the location of the specified screen point into client coordinates. (Inherited from Control .)
	PointToScreen	Computes the location of the specified client point into screen coordinates. (Inherited from Control .)
	PreProcessControlMessage	Preprocesses keyboard or input messages within the message before they are dispatched. (Inherited from Control .)
	PreProcessMessage	Preprocesses keyboard or input messages within the message before they are dispatched. (Inherited from Control .)
	ProcessCmdKey	(Inherited from ContainerControl .)
	ProcessDialogChar	(Inherited from ContainerControl .)
	ProcessDialogKey	(Inherited from ContainerControl .)

 ProcessKeyEventArgs	Processes a key message and generates the appropriate control events. (Inherited from Control .)
 ProcessKeyMessage	Processes a keyboard message. (Inherited from Control .)
 ProcessKeyPreview	Previews a keyboard message. (Inherited from Control .)
 ProcessMnemonic	(Inherited from ContainerControl .)
 ProcessTabKey	Selects the next available control and makes it the active control. (Inherited from ContainerControl .)
 RaiseDragEvent	Raises the appropriate drag event. (Inherited from Control .)
 RaiseKeyEvent	Raises the appropriate key event. (Inherited from Control .)
 RaiseMouseEvent	Raises the appropriate mouse event. (Inherited from Control .)
 RaisePaintEvent	Raises the appropriate paint event. (Inherited from Control .)
 RecreateHandle	Forces the re-creation of the window handle for the control. (Inherited from Control .)
 RectangleToClient	Computes the size and location of the specified screen rectangle in client coordinates. (Inherited from Control .)
 RectangleToScreen	Computes the size and location of the specified client rectangle in screen coordinates. (Inherited from Control .)
 Refresh	Forces the control to invalidate its client area and immediately repaint itself.

		redraw itself and any child controls. (Inherited from Control .)
	RemoveEvent	Removes an event from the calendar
	ResetBackColor	Resets the BackColor property to its default value. (Inherited from Control .)
	ResetBindings	Causes a control bound to a BindingSource to reread all items in the list and refresh displayed values. (Inherited from Control .)
	ResetCursor	Resets the Cursor property to its default value. (Inherited from Control .)
	ResetFont	Resets the Font property to its default value. (Inherited from Control .)
	ResetForeColor	Resets the ForeColor property to its default value. (Inherited from Control .)
	ResetImeMode	Resets the ImeMode property to its default value. (Inherited from Control .)
	ResetMouseEventArgs	Resets the control to handle the MouseLeave event. (Inherited from Control .)
	ResetRightToLeft	Resets the RightToLeft property to its default value. (Inherited from Control .)
	ResetText	Resets the Text property to its default value. (Inherited from Control .)
	ResumeLayout()	Resumes usual layout logic (Inherited from Control .)
		

	ResumeLayout(Boolean)	Resumes usual layout logic optionally forcing an immediate layout of pending layout requests. (Inherited from Control .)
	RtlTranslateAlignment(HorizontalAlignment)	Converts the specified HorizontalAlignment to the appropriate HorizontalAlignment to support right-to-left text. (Inherited from Control .)
	RtlTranslateAlignment(LeftRightAlignment)	Converts the specified LeftRightAlignment to the appropriate LeftRightAlignment to support right-to-left text. (Inherited from Control .)
	RtlTranslateAlignment(ContentAlignment)	Converts the specified ContentAlignment to the appropriate ContentAlignment to support right-to-left text. (Inherited from Control .)
	RtlTranslateContent	Converts the specified ContentAlignment to the appropriate ContentAlignment to support right-to-left text. (Inherited from Control .)
	RtlTranslateHorizontal	Converts the specified HorizontalAlignment to the appropriate HorizontalAlignment to support right-to-left text. (Inherited from Control .)
	RtlTranslateLeftRight	Converts the specified LeftRightAlignment to the appropriate LeftRightAlignment to support right-to-left text. (Inherited from Control .)
	Scale(Single)	Obsolete. Scales the control and any child controls.

		(Inherited from Control .)
	Scale(SizeF)	Scales the control and all child controls by the specified scale factor. (Inherited from Control .)
	Scale(Single, Single)	Obsolete. Scales the entire control and child controls. (Inherited from Control .)
	ScaleControl	(Inherited from ScrollableControl .)
	ScaleCore	(Inherited from ScrollableControl .)
	ScrollControlIntoView	Scrolls the specified child control into view on an auto-scroll enabled control. (Inherited from ScrollableControl .)
	ScrollToControl	Calculates the scroll offset for a specified child control. (Inherited from ScrollableControl .)
	Select()	Activates the control. (Inherited from Control .)
	Select(Boolean, Boolean)	(Inherited from ContainerControl .)
	SelectNextControl	Activates the next control. (Inherited from Control .)
	SendToBack	Sends the control to the back of the z-order. (Inherited from Control .)
	SetAutoScrollMargin	Sets the size of the auto-scroll margins. (Inherited from ScrollableControl .)
	SetAutoSizeMode	Sets a value indicating how

		control will behave when it AutoSize property is enable (Inherited from Control .)
	SetBounds(Int32, Int32, Int32, Int32)	Sets the bounds of the control to the specified location and size. (Inherited from Control .)
	SetBounds(Int32, Int32, Int32, Int32, BoundsSpecified)	Sets the specified bounds of the control to the specified location and size. (Inherited from Control .)
	SetBoundsCore	Performs the work of setting the specified bounds of this control. (Inherited from Control .)
	SetClientSizeCore	Sets the size of the client area of the control. (Inherited from Control .)
	SetDisplayRectLocation	Positions the display window of the control to the specified value. (Inherited from ScrollableControl .)
	SetScrollState	Sets the specified scroll state of the control. (Inherited from ScrollableControl .)
	SetStyle	Sets a specified ControlStyle to either true or false. (Inherited from Control .)
	SetTopLevel	Sets the control as the top-level control. (Inherited from Control .)
	SetVisibleCore	Sets the control to the specified visible state. (Inherited from Control .)
	Show	Displays the control to the user. (Inherited from Control .)
	SizeFromClientSize	Determines the size of the control from the height and width of the client area.

		of its client area. (Inherited from Control .)
	SuspendLayout	Temporarily suspends the layout logic for the control. (Inherited from Control .)
	ToString	Returns a String containing name of the Component , if applicable. This method should not be overridden. (Inherited from Component .)
	Update	Causes the control to redraw invalidated regions within its client area. (Inherited from Control .)
	UpdateBounds()	Updates the bounds of the control with the current size and location. (Inherited from Control .)
	UpdateBounds(Int32, Int32, Int32, Int32)	Updates the bounds of the control with the specified size and location. (Inherited from Control .)
	UpdateBounds(Int32, Int32, Int32, Int32, Int32, Int32)	Updates the bounds of the control with the specified size, location, and client size. (Inherited from Control .)
	UpdateDefaultButton	When overridden by a derived class, updates which button is the default button. (Inherited from ContainerControl .)
	UpdateStyles	Forces the assigned styles to be reapplied to the control. (Inherited from Control .)
	UpdateZOrder	Updates the control in its parent's z-order. (Inherited from Control .)
		

	Validate()	Verifies the value of the control that is losing focus by causing the Validating and Validated events to occur, in that order. (Inherited from ContainerControl .)
◆	Validate(Boolean)	Verifies the value of the control that is losing focus; conditionally dependent on whether automatic validation is turned on. (Inherited from ContainerControl .)
◆	ValidateChildren()	(Inherited from UserControl .)
◆	ValidateChildren(ValidationConstraints)	(Inherited from UserControl .)
◆	WndProc	(Inherited from UserControl .)

Calendar.AddEvent Method

[Calendar Class](#) [See Also](#) [Send Feedback](#)

Adds an event to the calendar

Namespace: [Calendar.NET](#)

Assembly: Calendar.NET (in Calendar.NET.dll) Version: 1.0.0.0 (1.0.0.0)

▣ Syntax

C#

```
public void AddEvent(  
    IEvent calendarEvent  
)
```

Visual Basic

```
Public Sub AddEvent ( _  
    calendarEvent As IEvent _  
)
```

Visual C++

```
public:  
void AddEvent(  
    IEvent^ calendarEvent  
)
```

Parameters

calendarEvent

Type: [Calendar.NET.IEvent](#)

The [IEvent](#) to add to the calendar

Calendar.RemoveEvent Method

[Calendar Class](#) [See Also](#) [Send Feedback](#)

Removes an event from the calendar

Namespace: [Calendar.NET](#)

Assembly: Calendar.NET (in Calendar.NET.dll) Version: 1.0.0.0 (1.0.0.0)

▣ Syntax

C#

```
public void RemoveEvent(  
    IEvent calendarEvent  
)
```

Visual Basic

```
Public Sub RemoveEvent (   
    calendarEvent As IEvent   
)
```

Visual C++

```
public:  
void RemoveEvent(  
    IEvent^ calendarEvent  
)
```

Parameters

calendarEvent

Type: [Calendar.NET.IEvent](#)

The [IEvent](#) to remove to the calendar

Calendar Properties

[Calendar Class](#) [See Also](#) [Send Feedback](#)

The [Calendar](#) type exposes the following members.

▣ Properties

	Name	Description
	AccessibilityObject	Gets the AccessibleObject assigned to the control. (Inherited from Control .)
	AccessibleDefaultActionDescription	Gets or sets the default action description of the control for use by accessibility client applications. (Inherited from Control .)
	AccessibleDescription	Gets or sets the description of the control used by accessibility client applications. (Inherited from Control .)
	AccessibleName	Gets or sets the name of the control used by accessibility client applications. (Inherited from Control .)
	AccessibleRole	Gets or sets the accessible role of the control (Inherited from Control .)
	ActiveControl	Gets or sets the active control on the container control. (Inherited from ContainerControl .)
	AllowDrop	Gets or sets a value indicating whether the control can accept data that the user drags onto it. (Inherited from Control .)
	AllowEditingEvents	Indicates whether events can be right-clicked and edited
	Anchor	Gets or sets the edges of the container to which a control is bound and determines how a control is resized with its parent.

		(Inherited from Control .)
	AutoScaleDimensions	Gets or sets the dimensions that the control was designed to. (Inherited from ContainerControl .)
	AutoScaleFactor	Gets the scaling factor between the current and design-time automatic scaling dimensions. (Inherited from ContainerControl .)
	AutoScaleMode	Gets or sets the automatic scaling mode of the control. (Inherited from ContainerControl .)
	AutoScroll	Gets or sets a value indicating whether the container enables the user to scroll to any controls placed outside of its visible boundaries. (Inherited from ScrollableControl .)
	AutoScrollMargin	Gets or sets the size of the auto-scroll margin. (Inherited from ScrollableControl .)
	AutoScrollMinSize	Gets or sets the minimum size of the auto-scroll. (Inherited from ScrollableControl .)
	AutoScrollOffset	Gets or sets where this control is scrolled to in ScrollControlIntoView(Control) . (Inherited from Control .)
	AutoScrollPosition	Gets or sets the location of the auto-scroll position. (Inherited from ScrollableControl .)

 AutoSize	(Inherited from UserControl .)
 AutoSizeMode	Gets or sets how the control will resize itself. (Inherited from UserControl .)
 AutoValidate	Gets or sets how the control performs validation when the user changes focus to another control. (Inherited from UserControl .)
 BackColor	Gets or sets the background color for the control. (Inherited from Control .)
 BackgroundImage	Gets or sets the background image displayed in the control. (Inherited from Control .)
 BackgroundImageLayout	Gets or sets the background image layout as defined in the ImageLayout enumeration. (Inherited from Control .)
 BindingContext	(Inherited from ContainerControl .)
 BorderStyle	Gets or sets the border style of the user control. (Inherited from UserControl .)
 Bottom	Gets the distance, in pixels, between the bottom edge of the control and the top edge of its container's client area. (Inherited from Control .)
 Bounds	Gets or sets the size and location of the control including its nonclient elements, in pixels, relative to the parent control. (Inherited from Control .)
 CalendarDate	The Date that the calendar is currently showing
	

	CalendarView	Indicates the type of calendar to render, Month or Day view
	CanEnableIme	Gets a value indicating whether the ImeMode property can be set to an active value, to enable IME support. (Inherited from ContainerControl .)
	CanFocus	Gets a value indicating whether the control can receive focus. (Inherited from Control .)
	CanRaiseEvents	Determines if events can be raised on the control. (Inherited from Control .)
	CanSelect	Gets a value indicating whether the control can be selected. (Inherited from Control .)
	Capture	Gets or sets a value indicating whether the control has captured the mouse. (Inherited from Control .)
	CausesValidation	Gets or sets a value indicating whether the control causes validation to be performed on any controls that require validation when it receives focus. (Inherited from Control .)
	ClientRectangle	Gets the rectangle that represents the client area of the control. (Inherited from Control .)
	ClientSize	Gets or sets the height and width of the client area of the control. (Inherited from Control .)
	CompanyName	Gets the name of the company or creator of the application

		containing the control. (Inherited from Control .)
	Container	Gets the IContainer that contains the Component . (Inherited from Component .)
	ContainsFocus	Gets a value indicating whether the control, or one of its child controls, currently has the input focus. (Inherited from Control .)
	ContextMenu	Gets or sets the shortcut menu associated with the control. (Inherited from Control .)
	ContextMenuStrip	Gets or sets the ContextMenuStrip associated with this control. (Inherited from Control .)
	Controls	Gets the collection of controls contained within the control. (Inherited from Control .)
	Created	Gets a value indicating whether the control has been created. (Inherited from Control .)
	CreateParams	(Inherited from UserControl .)
	CurrentAutoScaleDimensions	Gets the current run-time dimensions of the screen. (Inherited from ContainerControl .)
	Cursor	Gets or sets the cursor that is displayed when the mouse pointer is over the control. (Inherited from Control .)
	DataBindings	Gets the data bindings for the control. (Inherited from Control .)
	DateHeaderFont	Get or Set this value to the Font

		you wish to use to render the date in the upper right corner
	DayOfWeekFont	The font used to render the days of the week text
	DaysFont	The font used to render the number days on the calendar
	DayViewTimeFont	Indicates the font for the times on the day view
	DefaultCursor	Gets or sets the default cursor for the control. (Inherited from Control .)
	DefaultImeMode	Gets the default Input Method Editor (IME) mode supported by the control. (Inherited from Control .)
	DefaultMargin	Gets the space, in pixels, that is specified by default between controls. (Inherited from Control .)
	DefaultMaximumSize	Gets the length and height, in pixels, that is specified as the default maximum size of a control. (Inherited from Control .)
	DefaultMinimumSize	Gets the length and height, in pixels, that is specified as the default minimum size of a control. (Inherited from Control .)
	DefaultPadding	Gets the internal spacing, in pixels, of the contents of a control. (Inherited from Control .)
	DefaultSize	(Inherited from UserControl .)
	DesignMode	Gets a value that indicates whether the Component is

		currently in design mode. (Inherited from Component .)
	DimDisabledEvents	Indicates whether disabled events will appear as "dimmed". This property is only used if ShowDisabledEvents is set to true.
	DisplayRectangle	Gets the rectangle that represents the virtual display area of the control. (Inherited from ScrollableControl .)
	Disposing	Gets a value indicating whether the base Control class is in the process of disposing. (Inherited from Control .)
	Dock	Gets or sets which control borders are docked to its parent control and determines how a control is resized with its parent. (Inherited from Control .)
	DockPadding	Gets the dock padding settings for all edges of the control. (Inherited from ScrollableControl .)
	DoubleBuffered	Gets or sets a value indicating whether this control should redraw its surface using a secondary buffer to reduce or prevent flicker. (Inherited from Control .)
	Enabled	Gets or sets a value indicating whether the control can respond to user interaction. (Inherited from Control .)
	Events	Gets the list of event handlers that are attached to this

		Component . (Inherited from Component .)
	Focused	Gets a value indicating whether the control has input focus. (Inherited from Control .)
	Font	Gets or sets the font of the text displayed by the control. (Inherited from Control .)
	FontHeight	Gets or sets the height of the font of the control. (Inherited from Control .)
	ForeColor	Gets or sets the foreground color of the control. (Inherited from Control .)
	Handle	Gets the window handle that the control is bound to. (Inherited from Control .)
	HasChildren	Gets a value indicating whether the control contains one or more child controls. (Inherited from Control .)
	Height	Gets or sets the height of the control. (Inherited from Control .)
	HighlightCurrentDay	Indicates whether today's date should be highlighted
	HorizontalScroll	Gets the characteristics associated with the horizontal scroll bar. (Inherited from ScrollableControl .)
	HScroll	Gets or sets a value indicating whether the horizontal scroll bar is visible. (Inherited from ScrollableControl .)
		

	ImeMode	Gets or sets the Input Method Editor (IME) mode of the control. (Inherited from Control .)
	ImeModeBase	Gets or sets the IME mode of a control. (Inherited from Control .)
	InvokeRequired	Gets a value indicating whether the caller must call an invoke method when making method calls to the control because the caller is on a different thread than the one the control was created on. (Inherited from Control .)
	IsAccessible	Gets or sets a value indicating whether the control is visible to accessibility applications. (Inherited from Control .)
	IsDisposed	Gets a value indicating whether the control has been disposed of. (Inherited from Control .)
	IsHandleCreated	Gets a value indicating whether the control has a handle associated with it. (Inherited from Control .)
	IsMirrored	Gets a value indicating whether the control is mirrored. (Inherited from Control .)
	LayoutEngine	Gets a cached instance of the control's layout engine. (Inherited from Control .)
	Left	Gets or sets the distance, in pixels, between the left edge of the control and the left edge of its container's client area. (Inherited from Control .)

 LoadPresetHolidays	Indicates whether Federal Holidays are automatically preloaded onto the calendar
 Location	Gets or sets the coordinates of the upper-left corner of the control relative to the upper-left corner of its container. (Inherited from Control .)
 Margin	Gets or sets the space between controls. (Inherited from Control .)
 MaximumSize	Gets or sets the size that is the upper limit that GetPreferredSize(Size) can specify. (Inherited from Control .)
 MinimumSize	Gets or sets the size that is the lower limit that GetPreferredSize(Size) can specify. (Inherited from Control .)
 Name	Gets or sets the name of the control. (Inherited from Control .)
 Padding	Gets or sets padding within the control. (Inherited from Control .)
 Parent	Gets or sets the parent container of the control. (Inherited from Control .)
 ParentForm	Gets the form that the container control is assigned to. (Inherited from ContainerControl .)
 PreferredSize	Gets the size of a rectangular area into which the control can fit.

		(Inherited from Control .)
	ProductName	Gets the product name of the assembly containing the control. (Inherited from Control .)
	ProductVersion	Gets the version of the assembly containing the control. (Inherited from Control .)
	RecreatingHandle	Gets a value indicating whether the control is currently re-creating its handle. (Inherited from Control .)
	Region	Gets or sets the window region associated with the control. (Inherited from Control .)
	RenderRightToLeft	Obsolete. This property is now obsolete. (Inherited from Control .)
	ResizeRedraw	Gets or sets a value indicating whether the control redraws itself when resized. (Inherited from Control .)
	Right	Gets the distance, in pixels, between the right edge of the control and the left edge of its container's client area. (Inherited from Control .)
	RightToLeft	Gets or sets a value indicating whether control's elements are aligned to support locales using right-to-left fonts. (Inherited from Control .)
	ScaleChildren	Gets a value that determines the scaling of child controls. (Inherited from Control .)
	ShowArrowControls	Indicates whether the calendar control should render the

		previous/next month buttons
	ShowDashedBorderOnDisabledEvents	Indicates if a dashed border should show up around disabled events. This property is only used if ShowDisabledEvents is set to true.
	ShowDateInHeader	Indicates whether the date should be displayed in the upper right hand corner of the calendar control
	ShowDisabledEvents	Indicates whether disabled events should show up on the calendar control
	ShowEventTooltips	Indicates whether hovering over an event will display a tooltip of the event
	ShowFocusCues	Gets a value indicating whether the control should display focus rectangles. (Inherited from Control .)
	ShowKeyboardCues	Gets a value indicating whether the user interface is in the appropriate state to show or hide keyboard accelerators. (Inherited from Control .)
	ShowTodayButton	Indicates whether the calendar control should render the Today button
	Site	Gets or sets the site of the control. (Inherited from Control .)
	Size	Gets or sets the height and width of the control. (Inherited from Control .)
	TabIndex	Gets or sets the tab order of the control within its container.

		(Inherited from Control .)
	TabStop	Gets or sets a value indicating whether the user can give the focus to this control using the TAB key. (Inherited from Control .)
	Tag	Gets or sets the object that contains data about the control. (Inherited from Control .)
	Text	(Inherited from UserControl .)
	TodayFont	The font used to render the Today button
	Top	Gets or sets the distance, in pixels, between the top edge of the control and the top edge of its container's client area. (Inherited from Control .)
	TopLevelControl	Gets the parent control that is not parented by another Windows Forms control. Typically, this is the outermost Form that the control is contained in. (Inherited from Control .)
	UseWaitCursor	Gets or sets a value indicating whether to use the wait cursor for the current control and all child controls. (Inherited from Control .)
	VerticalScroll	Gets the characteristics associated with the vertical scroll bar. (Inherited from ScrollableControl .)
	Visible	Gets or sets a value indicating whether the control and all its child controls are displayed.

		(Inherited from Control .)
	VScroll	Gets or sets a value indicating whether the vertical scroll bar is visible. (Inherited from ScrollableControl .)
	Width	Gets or sets the width of the control. (Inherited from Control .)
	WindowTarget	This property is not relevant for this class. (Inherited from Control .)

Calendar Events

[Calendar Class](#) [See Also](#) [Send Feedback](#)

The [Calendar](#) type exposes the following members.

▣ Events

	Name	Description
	AutoSizeChanged	Occurs when the AutoSize property changes. (Inherited from UserControl .)
	AutoValidateChanged	Occurs when the AutoValidate property changes. (Inherited from UserControl .)
	BackColorChanged	Occurs when the value of the BackColor property changes. (Inherited from Control .)
	BackgroundImageChanged	Occurs when the value of the BackgroundImage property changes. (Inherited from Control .)
	BackgroundImageLayoutChanged	Occurs when the BackgroundImageLayout property changes. (Inherited from Control .)
	BindingContextChanged	Occurs when the value of the BindingContext property changes. (Inherited from Control .)
	CausesValidationChanged	Occurs when the value of the CausesValidation property changes. (Inherited from Control .)
	ChangeUICues	Occurs when the focus or keyboard user interface (UI) cues change. (Inherited from Control .)
	Click	Occurs when the control is clicked. (Inherited from Control .)
	ClientSizeChanged	Occurs when the value of the

		ClientSize property changes. (Inherited from Control .)
	ContextMenuChanged	Occurs when the value of the ContextMenu property changes. (Inherited from Control .)
	ContextMenuStripChanged	Occurs when the value of the ContextMenuStrip property changes. (Inherited from Control .)
	ControlAdded	Occurs when a new control is added to the Control.ControlCollection . (Inherited from Control .)
	ControlRemoved	Occurs when a control is removed from the Control.ControlCollection . (Inherited from Control .)
	CursorChanged	Occurs when the value of the Cursor property changes. (Inherited from Control .)
	Disposed	Occurs when the component is disposed by a call to the Dispose() method. (Inherited from Component .)
	DockChanged	Occurs when the value of the Dock property changes. (Inherited from Control .)
	DoubleClick	Occurs when the control is double-clicked. (Inherited from Control .)
	DragDrop	Occurs when a drag-and-drop operation is completed. (Inherited from Control .)
	DragEnter	Occurs when an object is dragged into the control's bounds.

		(Inherited from Control.)
	DragLeave	Occurs when an object is dragged out of the control's bounds. (Inherited from Control.)
	DragOver	Occurs when an object is dragged over the control's bounds. (Inherited from Control.)
	EnabledChanged	Occurs when the Enabled property value has changed. (Inherited from Control.)
	Enter	Occurs when the control is entered. (Inherited from Control.)
	FontChanged	Occurs when the Font property value changes. (Inherited from Control.)
	ForeColorChanged	Occurs when the ForeColor property value changes. (Inherited from Control.)
	GiveFeedback	Occurs during a drag operation. (Inherited from Control.)
	GotFocus	Occurs when the control receives focus. (Inherited from Control.)
	HandleCreated	Occurs when a handle is created for the control. (Inherited from Control.)
	HandleDestroyed	Occurs when the control's handle is in the process of being destroyed. (Inherited from Control.)
	HelpRequested	Occurs when the user requests help for a control. (Inherited from Control.)
		

	ImeModeChanged	Occurs when the ImeMode property has changed. (Inherited from Control .)
	Invalidated	Occurs when a control's display requires redrawing. (Inherited from Control .)
	KeyDown	Occurs when a key is pressed while the control has focus. (Inherited from Control .)
	KeyPress	Occurs when a key is pressed while the control has focus. (Inherited from Control .)
	KeyUp	Occurs when a key is released while the control has focus. (Inherited from Control .)
	Layout	Occurs when a control should reposition its child controls. (Inherited from Control .)
	Leave	Occurs when the input focus leaves the control. (Inherited from Control .)
	Load	Occurs before the control becomes visible for the first time. (Inherited from UserControl .)
	LocationChanged	Occurs when the Location property value has changed. (Inherited from Control .)
	LostFocus	Occurs when the control loses focus. (Inherited from Control .)
	MarginChanged	Occurs when the control's margin changes. (Inherited from Control .)
	MouseCaptureChanged	Occurs when the control loses or gains mouse capture.

		(Inherited from Control .)
	MouseClicked	Occurs when the control is clicked by the mouse. (Inherited from Control .)
	MouseDown	Occurs when the mouse pointer is over the control and a mouse button is pressed. (Inherited from Control .)
	MouseEnter	Occurs when the mouse pointer enters the control. (Inherited from Control .)
	MouseHover	Occurs when the mouse pointer rests on the control. (Inherited from Control .)
	MouseLeave	Occurs when the mouse pointer leaves the control. (Inherited from Control .)
	MouseMove	Occurs when the mouse pointer is moved over the control. (Inherited from Control .)
	MouseUp	Occurs when the mouse pointer is over the control and a mouse button is released. (Inherited from Control .)
	MouseWheel	Occurs when the mouse wheel moves while the control has focus. (Inherited from Control .)
	Move	Occurs when the control is moved. (Inherited from Control .)
	PaddingChanged	Occurs when the control's padding changes.

		(Inherited from Control .)
	Paint	Occurs when the control is redrawn. (Inherited from Control .)
	ParentChanged	Occurs when the Parent property value changes. (Inherited from Control .)
	PreviewKeyDown	Occurs before the KeyDown event when a key is pressed while focus is on this control. (Inherited from Control .)
	QueryAccessibilityHelp	Occurs when AccessibleObject is providing help to accessibility applications. (Inherited from Control .)
	QueryContinueDrag	Occurs during a drag-and-drop operation and enables the drag source to determine whether the drag-and-drop operation should be canceled. (Inherited from Control .)
	RegionChanged	Occurs when the value of the Region property changes. (Inherited from Control .)
	Resize	Occurs when the control is resized. (Inherited from Control .)
	RightToLeftChanged	Occurs when the RightToLeft property value changes. (Inherited from Control .)
	Scroll	Occurs when the user or code scrolls through the client area. (Inherited from ScrollableControl .)
	SizeChanged	Occurs when the Size property value changes.

		(Inherited from Control .)
	StyleChanged	Occurs when the control style changes. (Inherited from Control .)
	SystemColorsChanged	Occurs when the system colors change. (Inherited from Control .)
	TabIndexChanged	Occurs when the TabIndex property value changes. (Inherited from Control .)
	TabStopChanged	Occurs when the TabStop property value changes. (Inherited from Control .)
	TextChanged	(Inherited from UserControl .)
	Validated	Occurs when the control is finished validating. (Inherited from Control .)
	Validating	Occurs when the control is validating. (Inherited from Control .)
	VisibleChanged	Occurs when the Visible property value changes. (Inherited from Control .)

[See Also](#) [Send Feedback](#)

A delegate for creating custom recurring frequencies

Namespace: [Calendar.NET](#)

Assembly: Calendar.NET (in Calendar.NET.dll) Version: 1.0.0.0 (1.0.0.0)

■ Syntax

C#

```
public delegate bool CustomRecurringFrequenciesHandle  
    IEvent evnt,  
    DateTime day  
)
```

Visual Basic

```
Public Delegate Function CustomRecurringFrequenciesHa  
    evnt As IEvent, _  
    day As DateTime _  
) As Boolean
```

Visual C++

```
public delegate bool CustomRecurringFrequenciesHandle  
    IEvent^ evnt,  
    DateTime day  
)
```

Parameters

evnt

Type: [Calendar.NET.IEvent](#)

The [IEvent](#) in question

day

Type: [System.DateTime](#)

The day in question

Return Value

Should return a boolean value that indicates if the event should be rendered on

the day passed in

CustomRecurringFunction Members

[CustomRecurringFunction Class](#) [Constructors](#) [Methods](#) [Properties](#) [See Also](#) [Send Feedback](#)

The [CustomRecurringFunction](#) type exposes the following members.

≡ Constructors

	Name	Description
≡	CustomRecurringFunction(String)	CustomRecurringFunction Constructor
≡	CustomRecurringFunction(String, String)	CustomRecurringFunction Constructor

Methods

	Name	Description
	Equals	Returns a value that indicates whether this instance is equal to a specified object. (Inherited from Attribute .)
	Finalize	Allows an Object to attempt to free resources and perform other cleanup operations before the Object is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Returns the hash code for this instance. (Inherited from Attribute .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	IsDefaultAttribute	When overridden in a derived class, indicates whether the value of this instance is the default value for the derived class. (Inherited from Attribute .)
	Match	When overridden in a derived class, returns a value that indicates whether this instance equals a specified object. (Inherited from Attribute .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a String that represents the current Object . (Inherited from Object .)

▣ Properties

	Name	Description
	Description	Returns a description of the custom recurring function
	Name	Returns the name of the custom recurring function
	TypeId	When implemented in a derived class, gets a unique identifier for this Attribute . (Inherited from Attribute .)

The [IEvent](#) type exposes the following members.

☰ **Methods**

	Name	Description
	Clone	A function for cloning an event instance

▣ Properties

	Name	Description
	<u>CustomRecurringFunction</u>	Set this to a custom function that will automatically determine if the event should be rendered on a given day. This is only executed if <u>RecurringFrequency</u> is set to custom.
	<u>Date</u>	The Date that the event occurs
	<u>Enabled</u>	True if the event is enabled, otherwise false
	<u>EventColor</u>	The color that the event show up in on the calendar
	<u>EventFont</u>	The font describing the appearance of the event
	<u>EventLengthInHours</u>	A value indicating the length of the event, in hours.
	<u>EventText</u>	The name of the event
	<u>EventTextColor</u>	The text color of the event
	<u>IgnoreTimeComponent</u>	True if the time component of the date can be ignored
	<u>Rank</u>	The ranking of the event that determines the order in which it is displayed on a particular day
	<u>ReadOnlyEvent</u>	True if the event details cannot be modified
	<u>RecurringFrequency</u>	A value indicating how often the event occurs
	<u>ThisDayForwardOnly</u>	If this is a recurring event, set this to true to make the event show up only from the day specified forward
	<u>TooltipEnabled</u>	True if a tooltip should be displayed when hovering over the event

IEvent.CustomRecurringFunction Property

[IEvent Interface](#) [See Also](#) [Send Feedback](#)

Set this to a custom function that will automatically determine if the event should be rendered on a given day. This is only executed if [RecurringFrequency](#) is set to custom.

Namespace: [Calendar.NET](#)

Assembly: Calendar.NET (in Calendar.NET.dll) Version: 1.0.0.0 (1.0.0.0)

■ Syntax

C#

```
CustomRecurringFrequenciesHandler CustomRecurringFun
```

Visual Basic

```
Property CustomRecurringFunction As CustomRecurringF  
    Get  
    Set
```

Visual C++

```
property CustomRecurringFrequenciesHandler^ CustomRe  
    CustomRecurringFrequenciesHandler^ get ();  
    void set (CustomRecurringFrequenciesHandler^  
}
```

RectangleComparer Members

[RectangleComparer Class](#) [Constructors](#) [Methods](#) [See Also](#) [Send Feedback](#)

The [RectangleComparer](#) type exposes the following members.

☰ Constructors

	Name	Description
	RectangleComparer	Initializes a new instance of the RectangleComparer class

Methods

	Name	Description
	Compare	
	Equals	Determines whether the specified Object is equal to the current Object . (Inherited from Object .)
	Finalize	Allows an Object to attempt to free resources and perform other cleanup operations before the Object is reclaimed by garbage collection. (Inherited from Object .)
	GetHashCode	Serves as a hash function for a particular type. (Inherited from Object .)
	GetType	Gets the Type of the current instance. (Inherited from Object .)
	MemberwiseClone	Creates a shallow copy of the current Object . (Inherited from Object .)
	ToString	Returns a String that represents the current Object . (Inherited from Object .)

RecurringFrequencies Enumeration

[See Also](#) [Send Feedback](#)

An enumeration of built-in recurring event frequencies

Namespace: [Calendar.NET](#)

Assembly: Calendar.NET (in Calendar.NET.dll) Version: 1.0.0.0 (1.0.0.0)

☐ Syntax

C#

```
public enum RecurringFrequencies
```

Visual Basic

```
Public Enumeration RecurringFrequencies
```

Visual C++

```
public enum class RecurringFrequencies
```

Members

	Member name	Value	Description
	None	0	Indicates that the event is non recurring will occur only one time
	Daily	1	Indicates that the event will occur every day
	EveryWeekday	2	Indicates that the event will occur every week day (Mon - Fri)
	EveryMonWedFri	3	Indicates that the event will occur every Mon, Wed and Fri
	EveryTueThurs	4	Indicates that the event will occur every Tuesday and Thursday
	Weekly	5	Indicates that the event will occur every week
	Monthly	6	Indicates that the event will occur every month
	Yearly	7	Indicates that the event will occur once a year, on the month and day specified
	EveryWeekend	8	Indicates that the event will occur every weekend on Saturday and Sunday
	Custom	99	Indicates that the recurring schedule of this event is unique
