<multicol cols=2>
What is our Aim?

Transmitting the information can be said as communication between sender and clinets. How can we design better communication through the networks? Now we have many method such as Web, E-mail, Realtime video and more to communicate on the Internet. It is quite different from ordinary media, and there should be new designing rules. To find them, we provide the tips to put up the information to the net, make research into communication design, and have mailing list as discussion space.
Aspects of Design

The word "design" has some aspects. One aspect is surface design such as layout, coloring, video editing etc. Another is systematic design such as data base, transfer system, link structure, etc. We need to think about those aspects together as "design" to make better communication on the net.
Better Browsing we try to create NCD pages included available functions: HTML2.0 (basic tags), Netscape and Internet Explorer Extensions, but we always care that these pages can be browsed by any kind of browsers. Now, there is no browser supports all kinds of functions. So it is better to use some different browsers, and take a look their different appearance.
