Public Instance Constructors

 FileManagerPlugin Constructor	Initializes a new instance of the FileManagerPlugin class.
---	--

Public Instance Properties

 Prefix	
 ShortName (inherited from Moxiecode.Manager.Plugin)	

Public Instance Methods

 Equals (inherited from Object)	Determines whether the specified Object is equal to the current Object .
 GetHashCode (inherited from Object)	Serves as a hash function for a particular type. GetHashCode is suitable for use in hashing algorithms and data structures like a hash table.
 GetType (inherited from Object)	Gets the Type of the current instance.
 OnAfterStream (inherited from Moxiecode.Manager.Plugin)	
 OnAfterUpload (inherited from Moxiecode.Manager.Plugin)	
 OnAuthenticate (inherited from Moxiecode.Manager.Plugin)	
 OnBeforeFileAction (inherited	

from Moxiecode.Manager.Plugin)	
↳ OnBeforeRPC (inherited from Moxiecode.Manager.Plugin)	
↳ OnBeforeStream (inherited from Moxiecode.Manager.Plugin)	
↳ OnBeforeUpload (inherited from Moxiecode.Manager.Plugin)	
↳ OnCustomInfo	
↳ OnFileAction (inherited from Moxiecode.Manager.Plugin)	
↳ OnInit	
↳ OnInsertFile (inherited from Moxiecode.Manager.Plugin)	
↳ OnLogin (inherited from Moxiecode.Manager.Plugin)	
↳ OnLogout (inherited from Moxiecode.Manager.Plugin)	
↳ OnPreInit	
↳ OnRPC	
↳ OnStream (inherited from Moxiecode.Manager.Plugin)	
↳ OnUpload (inherited from Moxiecode.Manager.Plugin)	
↳ ToString (inherited from Object)	Returns a String that represents the current Object .

Protected Instance Methods

--	--

 Finalize (inherited from Object)	Allows an Object to attempt to free resources and perform other cleanup operations before the Object is reclaimed by garbage collection.
 MemberwiseClone (inherited from Object)	Creates a shallow copy of the current Object .

FileManagerPlugin Methods

The methods of the **FileManagerPlugin** class are listed below. For a complete list of **FileManagerPlugin** class members, see the [FileManagerPlugin Members](#) topic.

Public Instance Methods

◆ Equals (inherited from Object)	Determines whether the specified Object is equal to the current Object .
◆ GetHashCode (inherited from Object)	Serves as a hash function for a particular type. GetHashCode is suitable for use in hashing algorithms and data structures like a hash table.
◆ GetType (inherited from Object)	Gets the Type of the current instance.
◆ OnAfterStream (inherited from Moxiecode.Manager.Plugin)	
◆ OnAfterUpload (inherited from Moxiecode.Manager.Plugin)	
◆ OnAuthenticate (inherited from Moxiecode.Manager.Plugin)	
◆ OnBeforeFileAction (inherited from Moxiecode.Manager.Plugin)	
◆ OnBeforeRPC (inherited from Moxiecode.Manager.Plugin)	
◆ OnBeforeStream (inherited from Moxiecode.Manager.Plugin)	
◆ OnBeforeUpload (inherited	

from Moxiecode.Manager.Plugin)	
◆ OnCustomInfo	
◆ OnFileAction (inherited from Moxiecode.Manager.Plugin)	
◆ OnInit	
◆ OnInsertFile (inherited from Moxiecode.Manager.Plugin)	
◆ OnLogin (inherited from Moxiecode.Manager.Plugin)	
◆ OnLogout (inherited from Moxiecode.Manager.Plugin)	
◆ OnPreInit	
◆ OnRPC	
◆ OnStream (inherited from Moxiecode.Manager.Plugin)	
◆ OnUpload (inherited from Moxiecode.Manager.Plugin)	
◆ ToString (inherited from Object)	Returns a String that represents the current Object .

Protected Instance Methods

◆ Finalize (inherited from Object)	Allows an Object to attempt to free resources and perform other cleanup operations before the Object is reclaimed by garbage collection.
◆ MemberwiseClone (inherited from Object)	Creates a shallow copy of the current Object .

MManager classes

ZipFileFactory.GetFiles Method

Creates a new file instance.

```
public IFile GetFile(  
    ManagerEngine man,  
    string path,  
    string child,  
    FileType type  
);
```

Parameters

man

Associated ManagerEngine.

path

Absolute path to the file.

child

Child name inside the path. Could be null or empty string.

type

Default file type, if the file doesn't exist yet.

Implements

[IFileFactory.GetFiles](#)

[ZipFileImpl overview](#)

Public Instance Constructors

 ZipFileImpl Constructor	Initializes a file instance by a absolute path, child name and type. This can be useful when filtering non existing files.
---	--

Public Instance Properties

 AbsolutePath	Absolute file/directory path.
 CanRead (inherited from Moxiecode.Manager.FileSystems.BaseFile)	
 CanWrite (inherited from Moxiecode.Manager.FileSystems.BaseFile)	
 Config	
 CreationDate	Creation date of the file/directory.
 Exists	Exists state.
 InnerPath	
 IsDirectory	Is directory state.
 IsFile	Is file state.
 LastModified	Last modification date of the file/directory.
 Length	File size in bytes.
 Name	File/Directory name without the path.

 Parent	Absolute path of parent directory.
 ParentFile	IFile of parent directory.
 TriggerEvents (inherited from Moxiecode.Manager.FileSystems.BaseFile)	
 ZipEntry	
 ZipPath	

Public Instance Methods

 CopyTo (inherited from Moxiecode.Manager.FileSystems.BaseFile)	
 Delete	Overloaded.
 DispatchBeforeFileAction (inherited from Moxiecode.Manager.FileSystems.BaseFile)	Overloaded.
 DispatchFileAction (inherited from Moxiecode.Manager.FileSystems.BaseFile)	Overloaded.
 Dispose	
 Equals (inherited from Object)	Determines whether the specified Object is equal to the current Object .
 ExportFile	
 GetHashCode (inherited from Object)	Serves as a hash function for a particular type. GetHashCode is suitable for use in hashing algorithms and data

	structures like a hash table.
◆ GetType (inherited from Object)	Gets the Type of the current instance.
◆ ImportFile	
◆ ListFiles	List files in the specified directory.
◆ ListFilesFiltered	List files by the specified filter.
◆ ListTree	Lists a tree of files within a directory.
◆ ListTreeFiltered	Lists a tree of tiles within a directory by the specified filter.
◆ MkDir	
◆ Open	
◆ OpenZipFile	
◆ RenameTo (inherited from Moxiecode.Manager.FileSystems.BaseFile)	
◆ ToString (inherited from Object)	Returns a String that represents the current Object .

Protected Instance Fields

◆ absPath (inherited from Moxiecode.Manager.FileSystems.BaseFile)	
◆ fileTree (inherited from Moxiecode.Manager.FileSystems.BaseFile)	

 manager (inherited from Moxiecode.Manager.FileSystems.BaseFile)	
 triggerEventsState (inherited from Moxiecode.Manager.FileSystems.BaseFile)	

Protected Instance Methods

 Finalize (inherited from Object)	Allows an Object to attempt to free resources and perform other cleanup operations before the Object is reclaimed by garbage collection.
 MemberwiseClone (inherited from Object)	Creates a shallow copy of the current Object .

ZipFileImpl Methods

The methods of the **ZipFileImpl** class are listed below. For a complete list of **ZipFileImpl** class members, see the [ZipFileImpl Members](#) topic.

Public Instance Methods

◆ CopyTo (inherited from Moxiecode.Manager.FileSystems.BaseFile)	
◆ Delete	Overloaded.
◆ DispatchBeforeFileAction (inherited from Moxiecode.Manager.FileSystems.BaseFile)	Overloaded.
◆ DispatchFileAction (inherited from Moxiecode.Manager.FileSystems.BaseFile)	Overloaded.
◆ Dispose	
◆ Equals (inherited from Object)	Determines whether the specified Object is equal to the current Object .
◆ ExportFile	
◆ GetHashCode (inherited from Object)	Serves as a hash function for a particular type. GetHashCode is suitable for use in hashing algorithms and data structures like a hash table.
◆ GetType (inherited from Object)	Gets the Type of the current instance.

 ImportFile	
 ListFiles	List files in the specified directory.
 ListFilesFiltered	List files by the specified filter.
 ListTree	Lists a tree of files within a directory.
 ListTreeFiltered	Lists a tree of tiles within a directory by the specified filter.
 MkDir	
 Open	
 OpenZipFile	
 RenameTo (inherited from Moxiecode.Manager.FileSystems.BaseFile)	
 ToString (inherited from Object)	Returns a String that represents the current Object .

Protected Instance Methods

 Finalize (inherited from Object)	Allows an Object to attempt to free resources and perform other cleanup operations before the Object is reclaimed by garbage collection.
 MemberwiseClone (inherited from Object)	Creates a shallow copy of the current Object .

Public Instance Constructors

 ZipFileStream Constructor	
---	--

Public Instance Properties

 CanRead (inherited from MemoryStream)	Gets a value indicating whether the current stream supports reading.
 CanSeek (inherited from MemoryStream)	Gets a value indicating whether the current stream supports seeking.
 CanTimeout (inherited from Stream)	Gets a value that determines whether the current stream can time out.
 CanWrite (inherited from MemoryStream)	Gets a value indicating whether the current stream supports writing.
 Capacity (inherited from MemoryStream)	Gets or sets the number of bytes allocated for this stream.
 Length (inherited from MemoryStream)	Gets the length of the stream in bytes.
 Position (inherited from MemoryStream)	Gets or sets the current position within the stream.
 ReadTimeout (inherited from Stream)	Gets or sets a value that determines how long the stream will attempt to read before timing out.
 WriteTimeout (inherited from Stream)	Gets or sets a value that determines how long the stream

will attempt to write before timing out.

Public Instance Methods

◆ BeginRead (inherited from Stream)	Begins an asynchronous read operation.
◆ BeginWrite (inherited from Stream)	Begins an asynchronous write operation.
◆ Close	
◆ CreateObjRef (inherited from MarshalByRefObject)	Creates an object that contains all the relevant information required to generate a proxy used to communicate with a remote object.
◆ Dispose (inherited from Stream)	Overloaded. Releases all resources used by the Stream .
◆ EndRead (inherited from Stream)	Waits for the pending asynchronous read to complete.
◆ EndWrite (inherited from Stream)	Ends an asynchronous write operation.
◆ Equals (inherited from Object)	Determines whether the specified Object is equal to the current Object .
◆ Flush (inherited from MemoryStream)	Overrides Flush so that no action is performed.
◆ GetBuffer (inherited from MemoryStream)	Returns the array of unsigned bytes from which this stream was created.
◆ GetHashCode (inherited from Object)	Serves as a hash function for a particular type. GetHashCode is suitable for use in hashing algorithms and data structures

	like a hash table.
◆ GetLifetimeService (inherited from MarshalByRefObject)	Retrieves the current lifetime service object that controls the lifetime policy for this instance.
◆ GetType (inherited from Object)	Gets the Type of the current instance.
◆ InitializeLifetimeService (inherited from MarshalByRefObject)	Obtains a lifetime service object to control the lifetime policy for this instance.
◆ Read (inherited from MemoryStream)	Reads a block of bytes from the current stream and writes the data to buffer.
◆ ReadByte (inherited from MemoryStream)	Reads a byte from the current stream.
◆ Seek (inherited from MemoryStream)	Sets the position within the current stream to the specified value.
◆ SetLength (inherited from MemoryStream)	Sets the length of the current stream to the specified value.
◆ ToArray (inherited from MemoryStream)	Writes the entire stream contents to a byte array, regardless of the Position property.
◆ ToString (inherited from Object)	Returns a String that represents the current Object .
◆ Write (inherited from MemoryStream)	Writes a block of bytes to the current stream using data read from buffer.
◆ WriteByte (inherited from MemoryStream)	Writes a byte to the current stream at the current position.
◆ WriteTo (inherited from MemoryStream)	Writes the entire contents of this memory stream to another

stream.

Protected Instance Methods

 CreateWaitHandle (inherited from Stream)	Obsolete. Allocates a WaitHandle object.
 Dispose (inherited from MemoryStream)	Overloaded. Releases the unmanaged resources used by the MemoryStream and optionally releases the managed resources.
 Finalize (inherited from Object)	Allows an Object to attempt to free resources and perform other cleanup operations before the Object is reclaimed by garbage collection.
 MemberwiseClone (inherited from MarshalByRefObject)	Overloaded. Creates a shallow copy of the current MarshalByRefObject object.
 MemberwiseClone (inherited from Object)	Overloaded. Creates a shallow copy of the current Object .

ZipFileStream Methods

The methods of the **ZipFileStream** class are listed below. For a complete list of **ZipFileStream** class members, see the [ZipFileStream Members](#) topic.

Public Instance Methods

BeginRead (inherited from Stream)	Begins an asynchronous read operation.
BeginWrite (inherited from Stream)	Begins an asynchronous write operation.
Close	
CreateObjRef (inherited from MarshalByRefObject)	Creates an object that contains all the relevant information required to generate a proxy used to communicate with a remote object.
Dispose (inherited from Stream)	Overloaded. Releases all resources used by the Stream .
EndRead (inherited from Stream)	Waits for the pending asynchronous read to complete.
EndWrite (inherited from Stream)	Ends an asynchronous write operation.
Equals (inherited from Object)	Determines whether the specified Object is equal to the current Object .
Flush (inherited from MemoryStream)	Overrides Flush so that no action is performed.
GetBuffer (inherited from MemoryStream)	Returns the array of unsigned bytes from which this stream was created.
GetHashCode (inherited from	Serves as a hash function for a

Object)	particular type. GetHashCode is suitable for use in hashing algorithms and data structures like a hash table.
◆ GetLifetimeService (inherited from MarshalByRefObject)	Retrieves the current lifetime service object that controls the lifetime policy for this instance.
◆ GetType (inherited from Object)	Gets the Type of the current instance.
◆ InitializeLifetimeService (inherited from MarshalByRefObject)	Obtains a lifetime service object to control the lifetime policy for this instance.
◆ Read (inherited from MemoryStream)	Reads a block of bytes from the current stream and writes the data to buffer.
◆ ReadByte (inherited from MemoryStream)	Reads a byte from the current stream.
◆ Seek (inherited from MemoryStream)	Sets the position within the current stream to the specified value.
◆ SetLength (inherited from MemoryStream)	Sets the length of the current stream to the specified value.
◆ ToArray (inherited from MemoryStream)	Writes the entire stream contents to a byte array, regardless of the Position property.
◆ ToString (inherited from Object)	Returns a String that represents the current Object .
◆ Write (inherited from MemoryStream)	Writes a block of bytes to the current stream using data read from buffer.
◆ WriteByte (inherited from	Writes a byte to the current

MemoryStream)	stream at the current position.
 WriteTo (inherited from MemoryStream)	Writes the entire contents of this memory stream to another stream.

Protected Instance Methods

 CreateWaitHandle (inherited from Stream)	Obsolete. Allocates a WaitHandle object.
 Dispose (inherited from MemoryStream)	Overloaded. Releases the unmanaged resources used by the MemoryStream and optionally releases the managed resources.
 Finalize (inherited from Object)	Allows an Object to attempt to free resources and perform other cleanup operations before the Object is reclaimed by garbage collection.
 MemberwiseClone (inherited from MarshalByRefObject)	Overloaded. Creates a shallow copy of the current MarshalByRefObject object.
 MemberwiseClone (inherited from Object)	Overloaded. Creates a shallow copy of the current Object .
