How can we help you?

Use the links below to find instructions, software training, one-on-one support, technical specifications, or other resources to get Sage ERP Accpac working smoothly for your business! Your Sage Business Partner is also an excellent resource to consult when you have questions about Sage ERP Accpac.

- I'm setting up Sage ERP Accpac and need information or assistance
- I'm looking for instructions to complete a task within Sage ERP Accpac
- I think something is broken, or I'm getting error messages
- I'm looking for downloads, updates, or technical specifications
- I want to become a more skilled user of Sage ERP Accpac
- I want to share knowledge with other Sage ERP Accpac users
- I want to contact a Sage ERP Accpac representative
What's New in Purchase Orders 6.0

Purchase Orders version 6.0 supports changes to Common Services’ Fiscal Calendar.

Fiscal periods are now locked separately for each Sage ERP Accpac program, including Purchase Orders. Although this change does not affect the way you enter transactions, you should note the following points:

- The program checks the status of a fiscal period when you enter certain dates in Purchase Orders documents.
- Day End Processing is not affected by locked fiscal periods.

Day End Processing creates transactions for General Ledger, Accounts Payable, and Project and Job Costing (depending on your system and settings) and updates costs, as usual. However, if a fiscal period is locked for a ledger receiving the resulting transactions, the transactions can fail to post in the other ledger.

Upgrading from an Earlier Version?

- If you are upgrading from version 5.5, see Features Added in Purchase Orders 5.6.
- If you are upgrading from version 5.4, also see Features Added in Purchase Orders 5.5.
- If you are upgrading from version 5.3, also see Features Added in Purchase Orders 5.4.
Steps for Setting Up Purchase Orders

Before you can set up Purchase Orders, you must install the following Sage ERP Accpac programs: System Manager (with Bank Services and Tax Services), Accounts Payable, and (if you use them) General Ledger and Inventory Control. Then install and activate Purchase Orders.

You must also create a company database and choose company-wide options in Common Services, and activate Tax Services, then add information about the taxes used in your Purchase Orders system.

If needed, add information about the currencies used in your Purchase Orders system.

1. **Step 1: Activate Purchase Orders, select options, and add background information and optional fields**
2. **Step 2: Design the formats for your printed and e-mailed forms**
3. **Step 3: Add current transactions**
4. **Step 4: Add historical transactions and statistics (optional)**

Setting Up Purchase Orders without Inventory Control

Purchase Orders is designed to be used with or without Inventory Control.

To set up the program for use as a stand-alone program, without Inventory Control, follow the procedures for setting up Purchase Orders with Inventory Control. Then you must take the following additional steps to set up Purchase Orders for use as a stand-alone program:

• Select the Allow Fractional Quantities option, if needed, and add the Weight Unit Of Measure on the Processing tab of the Options form.

• Define and add records for account sets, items, vendor details, and weight units of measure.
Using Multicurrency Accounting in Purchase Orders

Purchase Orders lets you process transactions in any currencies your vendors use. This section summarizes the steps you take to set up a multicurrency Purchase Orders system.

To create a multicurrency Purchase Orders system

1. Turn on the Multicurrency option for the company and select a default rate type in the Company Profile form in Common Services.

2. Use the Common Services Currency forms to add any currency codes you need for Purchase Orders, and enter rates for the currencies you use.

   Sage ERP Accpac comes with a comprehensive set of currency codes that use standard international abbreviations and the format and number of decimal places that are normally used with each currency. You probably will not need to define new codes unless you do not use the international codes.

3. Turn on the Multicurrency option in your Accounts Payable Options form. This step automatically turns on the Multicurrency option for Purchase Orders as well.

4. Create an account set in Accounts Payable for each currency you want to use for Accounts Payable vendors in Purchase Orders.

5. If you post transactions to add current or year-to-date requisitions or purchase orders, enter the amounts in the vendors' currencies.

6. If you enter statistics for previous years and periods, enter the amounts in both the functional and vendor currencies. Purchase Orders cannot calculate equivalent amounts from statistics you enter yourself.

For more information, see Processing multicurrency transactions.

Steps for setting up Purchase Orders
Creating Formats for Printed Forms

The Sage ERP Accpac Purchase Orders package includes sample formats you may be able to use with your laser or ink-jet printer "as is" or adapt to print on the forms you use for purchase orders, requisitions, receiving slips, returns, and mailing labels.

The files containing the formats include:

<table>
<thead>
<tr>
<th>Form</th>
<th>Printing On Plain Paper</th>
<th>Printing On Preprinted Forms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Requisition</td>
<td>PORQN01</td>
<td>PORQN02</td>
</tr>
<tr>
<td>Purchase order</td>
<td>POPOR01</td>
<td>POPOR02 POPOR05</td>
</tr>
<tr>
<td>POPOR04</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Receiving slip</td>
<td>PORCP01</td>
<td>PORCP02</td>
</tr>
<tr>
<td>PORCP03</td>
<td></td>
<td>PORCP04</td>
</tr>
<tr>
<td>Returns</td>
<td>PORET01</td>
<td>PORET02</td>
</tr>
<tr>
<td>Mailing labels</td>
<td>POLABEL</td>
<td>n/a</td>
</tr>
</tbody>
</table>

If possible, you should design the formats you want to use and test them with the sample data before you begin entering transactions in your new Purchase Orders system.

For more information on custom formats, see the online document "Customizing Printed Forms with Crystal Reports."

**E-mailing purchase orders and returns.** The Purchase Orders program also lets you email purchase orders and purchase order returns to vendors.

If you want to email purchase orders and returns to vendors, you use the Email Messages form in the P/O Setup folder to create the email messages that you want to send to vendors.

For each vendor that you want to email, you must set the Delivery Method to Email or to Contact's Email on the Processing tab of the vendor record in Accounts Payable.
Purchase Orders Security: Overview

If security is turned on for your Sage ERP Accpac ERP system, users without Purchase Orders security assignments have no access to Purchase Orders.

To view records and to print reports in Purchase Orders, users must belong to a security group with Common Inquiry permission.

Common Inquiry permission by itself does not let users edit any Purchase Orders records. To allow users in a security group to edit records or perform processing tasks, you must grant the group access to additional tasks from the following list:

- Setup Maintenance
- Item Maintenance (Service)
- Cost Inquiry (in stand alone P/O systems)
- Requisition Entry
- Requisition Printing
- Purchase Order Entry
- Edit Blanket PO Amount (requires rights to PO Entry)
- Create POs Automatically
- Day End Processing (Service)
- Purchase Order Printing
- Receipt Entry
- Receiving Slip Printing
- Return Entry
- Return Printing
- Invoice Entry
- Edit Invoiced Quantity (requires rights to Invoice Entry)
- Edit Invoiced Cost (requires rights to Invoice Entry)
- Credit/Debit Note Entry
- Edit Credit Note Quantity (requires rights to Credit/Debit Note Entry)
- Edit Credit Note Cost (requires rights to Credit/Debit Note Entry)
- Mailing Label Printing
- Transaction Inquiry
- History Clearing
- Import Processing (requires rights to the form to import into)
- Export Processing (requires rights to the form to export from)
- Transaction Optional Fields
- Show Requisition/Receipt Costing Information
- Requisitions Manual Approval
- Dashboard
If you use Purchase Orders as a stand-alone system (without Inventory Control) this form lets you:

- Define a set of general ledger accounts to which you post Purchase Orders transactions.

You must add at least one account set to Purchase Orders before you can add item records. If you add more than one account set, you can group items by the account set to which they belong.

Click the following buttons or the links for help on using these buttons:

Create E-mail Messages

Purchase Orders lets you e-mail purchase orders and purchase returns directly to vendors using the forms for printing purchase orders and returns.

To e-mail purchase orders and returns

1. Use the Email Messages form in the P/O Setup folder to create the email message that you want to send to vendors.

Each message is identified with a unique 16-character message ID code. When you select vendor as the Delivery Method on the print purchase orders or returns forms, you can also select the Message ID for the type of form you are sending.

To create e-mail messages:

a. Double-click the E-mail Messages icon in the P/O Setup folder.

b. Select Purchase Order or Return from the drop-down list in the Message Type field.

c. Click the New button.

d. In the Message ID field, enter an ID, using up to 16 characters.

e. Enter a description in the Description field.

f. Enter a subject in the E-mail Subject field. Note that you can use e-mail information codes in this field. They will be replaced by the company or document information when the message is sent.

g. Type your message, using company or document information codes to specify PO or return details.

h. Click Add or Save when you are satisfied with your message.

2. In Accounts Payable, set the Delivery Method to Email or to Contact's Email for each vendor that you want to email. You set the delivery method on the Processing tab of the vendor record in Accounts Payable.

3. Choose Vendor as the Delivery Method on the Print Purchase Orders or Print Returns form when you print purchase orders or returns.

Using the G/L Integration Form

Use this form to choose various options for integrating Purchase Orders with the General Ledger program.

On the Integration tab:

- Specify whether to add general ledger transactions to the G/L batch during posting or each time you run Day End Processing, or to create the transactions at a later date.

  **Note:** This choice can have a large impact on the speed of processing transactions in Purchase Orders, especially if you are costing inventory during posting (in which case, you may want to create transactions at a later date).

- Choose whether to create a separate G/L batch each time you create the G/L batch (and optionally automatically post the batch) or add new transactions to the existing batch. (This option applies only if you use Sage Accpac General Ledger with Purchase Orders at the same location.)

- Choose whether to consolidate the G/L batch when you post, or always enter full transaction details in the batch.

- Decide when Sage ERP Accpac ERP generates entries for non-inventory expenses and for expensed additional costs:
  - Choose whether to generate G/L entries in the Purchase Orders program for expenses from receipts and returns for non-inventory items, or have the G/L entries for expenses created in the Accounts Payable program.
  - Choose whether to generate G/L entries in the Purchase Orders program for additional cost expenses on receipts, or have the G/L entries for expenses created in the Accounts Payable program. (This is similar to the previous option.)

- Specify several General Ledger accounts used by the Purchase Orders program:
  - The G/L account number of the default inventory expense account, default cost expense account, and non-inventory payables clearing
The G/L account that you want to update with expensed additional costs if you create general ledger transactions from Purchase Orders. (See Create G/L Entries for Expensed Additional Costs.)

- Look up the last Day End Number for which you have created general ledger batches.

**On the Transactions tab:**

- Select the information to appear in the Entry Description, Detail Description, and Detail Reference and Comment fields in G/L transactions arising from invoices and shipments. (This information appears for transactions in the G/L Transactions report.)

Click the field list button or on of the links shown below for more information on selecting G/L integration options.

Transactions tab

**Changing Settings**

You can change any of your choices on the G/L Integration page at any time. However, you should be aware that any changes you make will apply only to general ledger transactions created after the change, and will not affect existing general ledger batches.

If you want to change from using the Create Batch form to produce your general ledger transactions to creating them during day-end processing, be sure to run Create Batch to process any outstanding transactions first, to avoid accidentally omitting transactions from your general ledger batches.

**Before using the G/L Integration form**

Before changing any of the settings or other information in the G/L Integration form, make sure you understand the impact the options have on processing within Purchase Orders.

**Note:** You cannot change settings on the Integration tab of the G/L Integration form if other Purchase Orders forms are open, or other users are working with the Inventory Control database.
Make sure that no one else is using the Purchase Orders data and that no other Purchase Orders forms are open for the company before you save changes to the G/L Integration form.

**A/P integration option is set in the P/O Options form**

Purchase Orders also lets you choose when to post Accounts Payable batches arising from invoices posted in Purchase Orders.

To specify when to post A/P batches generated from Purchase Orders Invoices, credit notes and debit notes, use the option Post A/P Batches During Posting or Day End Processing/On Request Using Create Batch Icon.

Items Form — Overview

The Items Form lets you:

• Add a record for each item in your inventory list.

  An item record includes the item code, account set, tax authority, and tax classes that the item uses. It also includes units of measure and a unit of weight for the item, as well as up to 300 characters of additional descriptive information.

Before adding item records

• Add the account sets you require for posting transactions to general ledger accounts.

• Add the taxing authorities and tax classes you require (using the Tax Services icon in the Common Services folder).

Optional Fields Form

This form appears in the P/O Setup folder if you use Sage ERP Accpac's Transaction Analysis and Optional Field Creator, a separately licensed package that you can purchase and use with Purchase Orders.
To set up optional fields for your Purchase Orders system

1. Choose the Optional Fields form from the P/O Setup folder.
2. Select the form to which you are adding the optional fields.
3. Select the optional fields that you are adding.

You must use the same optional fields for transactions in Purchase Orders, Accounts Payable, and General Ledger if you want to pass optional field information from Purchase Orders transactions to Accounts Payable when you create A/P invoice batches and to General Ledger when you create batches for G/L transactions.

Similarly, you must define the same fields for transaction details as you define for additional costs and item records if you want information from costs and items to appear by default in transactions. (Items are used only if you do not have Sage ERP Accpac Inventory Control.)

4. If you want to set a default value for the optional field, double-click in the Value Set column to change it to Yes.
5. Type or select the value that the program will display as the default for each optional field.

- If the optional field you selected requires validation (in other words, the user is restricted to choosing from a list of entries), you must select a value that is defined for the optional field in Common Services.
- If the optional field allows blanks, you can leave the default value field blank.
- If the optional field does not use validation, you can do one of the following:
  - Select a value that is defined for the optional field in Common Services.
  - Leave the field blank.
  - Enter the default value that you want. The entry must be
consistent with the type of field (text, number, date, amount, and so on) and must not exceed the number of characters specified for the optional field. In a Yes/No field, you can enter only Yes or No.

When you specify a value that is defined in Common Services, the program displays the description for the value.

6. To make the optional field mandatory, double-click in the Required column.

If you make an optional field a required field, the Auto Insert field changes to Yes.

7. Select Yes in the Auto Insert field if you want the program to display the optional field and its default value on the form for the type of optional field when you set up new records or enter transactions. Select No if you do not want the optional field to appear automatically.

8. If the Settings button is active, choose the Settings button to specify which optional fields will be sent through to other Sage ERP Accpac subledgers and which will be included in transactions that will be passed to General Ledger for posting to G/L accounts.

By default, all optional fields in Purchase Orders that match fields in Accounts Payable and in General Ledger accounts will be passed to A/P and G/L unless you restrict the fields using the Settings form. See Optional Field Settings.

9. Click Save to save your changes.

Options Form — Overview

You select options when you create your Purchase Orders ledger. Once you have set up your ledger, use this Form when you need to change your selections.

This form lets you:

- Change the contact name, telephone number, and fax number for your ledger. (Choose the Company tab.)
- Check the choice for the Multicurrency option (set in Accounts Payable) and, if you use multicurrency accounting, specify a default rate type for the Purchase Orders ledger. (Choose the Processing tab.)
- Select options to determine whether your Purchase Orders ledger allows non-inventory items, keeps transaction and purchasing history, and accumulates statistics, and specify a default template code and a default cost type. (Choose the Processing tab.)
- Specify the number of days in each of three aging periods. (Choose the Documents tab.)
- Enter the length, prefix, and next number to assign as document numbers to purchase orders, requisitions, receipts, and returns. (Choose the Documents tab.)
- If you do not use Inventory Control, choose when to cost items maintained by the Purchase Orders module.

**Note:** You cannot save most changes to the Options form if any other Purchase Orders forms are open for the company on your computer or on other workstations on a network.

For information about another tab on the Options form, choose the corresponding link:

Ship-Via Codes Form

This form lets you:

- Set up a record for each carrier you use to deliver your orders from vendors.

Ship-via records are optional. Add them for the carriers you regularly use, so that you have a record of each carrier's address, phone numbers, and contact people. You can then specify ship-via codes on purchase orders, requisitions, receipts, and returns. If you do not use ship-via records, you can still type the name of a carrier on transactions (but not the address or any other information), or not specify a shipping method at all.

Click the following links for help on using the corresponding buttons:

Vendor Contract Costs Form

This form lets you:

- Assign vendors’ prices to your inventory items, specifying:
  - Base unit costs for single or multiple units of measure.
  - Sale unit costs for single or multiple units of measure.
  - Volume discount amounts or percentages.
  - Tax authorities and tax statuses for the contract cost.

Vendor Contract costs appear by default when you add purchase orders, receipts, invoices, returns, and credit/debit notes. If no contract cost exists for an item and vendor, Purchase Orders displays the Default Item Cost specified in the P/O Options form.

You can also view all vendors’ contract costs in the item Finder for the Unit Cost field in the Purchase Order, Receipt, Invoice, Return, and Credit/Debit Note Entries forms.

**Note:** Vendor Contract Costs are not available in Sage ERP Accpac 100.

Weight Units of Measure Form

This form lets you:

- Add the different units that you use for measuring the weight of items — such as pounds, tons, kilograms, and metric tons.

The default weight unit of measure (specified on the P/O Options form) is the unit for expressing the weight of orders in the Purchase Orders module if you do not use the Inventory Control module.

The default weight unit of measure has a conversion factor of 1, and all other weight UOMs are defined in terms of a default weight UOM.

To add a weight unit of measure, you specify

- The weight unit of measure.
- A description of the weight.
- The weight conversion factor between the default weight unit of measure and the unit you are adding (as a multiple of the default weight unit of measure).
  - The conversion factor for a default weight unit of measure is always 1.
  - You can use fractions in weight conversion factors even if you do not use fractional inventory quantities.

Before adding weight units of measure

- Decide on the default weight unit of measure that you want to use on orders.
- Calculate the conversion factors between the default weight unit of measure and all other weight units of measure.
  
  You set the default weight unit of measure on the P/O Options form after adding it to the Weight Units of Measure form.
- Choose what to call each of the weight units of measure. The names you use appear on data entry screens.

Working with Detail Entry Grids

The first tab of each transaction entry form in Purchase Orders contains a detail entry grid that shows the document details in tabular format.

If there are more columns than can be displayed at one time, you can use the horizontal scroll bar at the bottom of a list to view the additional columns. You can also rearrange the order of columns, or change column widths, consistent with how you enter data.

If you need to view or edit tax options for a single detail, you can select a detail on the grid, then open a separate form that lets you see all the fields, including tax fields, for the selected detail.

To add details using the detail grid, do one of the following

- If a blank line is highlighted, tab to the Item Number field, then either type the item number or select it from the Finder. Enter the remaining information for the detail.

- To start a new line, press Insert or tab through the end of the last line on the grid. If you want to insert a new line in a particular location, highlight the line above the location, then press Insert.

A detail line is saved as you enter it on the detail entry grid.

To edit details using the detail grid

- Highlight the line you want to edit, then enter your changes on that line.

To delete details using the detail grid

1. Highlight the line you want to delete.
2. Press the Delete key on your keyboard.
3. If you see a message asking you to confirm the deletion, click Yes.

To open the Detail Items/Taxes form or the Detail Costs/Taxes form

In most cases, you can enter all the necessary details for a document
right on the grid.

You can also view and edit all the fields for a single detail on a separate Detail Items/Taxes form. The Detail Items/Taxes form also contains tax information fields that let you change certain tax options for the detail. These tax fields do not appear in the detail grid.

To open the Detail Items/Taxes form to edit item information or to change the Tax Class or Tax Included options, highlight the detail on the grid, then either click the Item/Tax button or press the F9 key on your keyboard.

If you are entering additional costs, you highlight an additional cost detail, then click the Cost/Tax button or press the F9 key to open the Detail Costs/Taxes form. The Detail Costs/Taxes form contains all the fields, including tax fields, for the selected additional cost detail.

Changing column widths
The File menu appears in most Purchase Orders forms. The File menu in each form contains some or all of the following commands.

**Print**

Prints the current report, list, or form.

**Printer Setup**

Selects a printer and sets printing options.

**Customize**

Lets you hide or display fields on a form, depending on the user.

**Import**

Imports the data records you specify from non-Sage ERP Accpac programs to Purchase Orders.

**Export**

Exports the data records you specify from Purchase Orders to non-Sage ERP Accpac programs.

**Close**

Closes the current form.
Help Menu

The Help menu contains the following commands.

Contents
Starts Help and displays the topics in Purchase Orders Help.

Using Help
Describes how to use Help.

About...
Displays information about Purchase Orders, including:
  • Product version number.
  • Copyright information.
A Settings menu appears in the menu bar for transaction entry forms and on some report forms — such as the screens for printing requisitions, purchase orders, receiving slips, returns, and mailing labels.

The Settings menu provides the following options:

**Auto Clear** (on transaction entry forms)

The Auto Clear option helps you to streamline data entry in transaction entry forms.

Select the Auto Clear option to start a new entry automatically when you add a transaction (as if you clicked the Add button, then the New button).

**Save Settings As Defaults** (on print forms)

In some print forms, the Settings menu also contains options that let you save the current settings as personal defaults or restore the program's original settings.

To save the current settings as your personal defaults for the form, select the Save Settings As Defaults option.

**Clear Saved Settings** (on print forms)

To revert to the program's original settings, select the Clear Saved Settings option.
Creating Purchase Orders

Before you begin

• If you require requisitions for purchase orders, add the requisitions first using the Requisition Entry form.

• Make sure you have full information for each purchase order, including vendor number, purchase order number (if you enter your own document numbers), requisition number (if required), your company's shipping and billing locations or addresses for the purchase order, arrival date and type of purchase order, and the vendor's address, contact, phone numbers, tax group, and terms code.

• For each item on the order, find out the item number, unit of measure, quantity to order, and location (if you use Inventory Control). For items for which no record exists in your system, you also must have turned on the Allow Non-inventory Items option and know the general ledger expense account for each detail.

• For each drop-shipment, find out the address and customer number or inventory location (if applicable, and you have Inventory Control) for the shipment.

• If you use multicurrency accounting, find out the rate type, rate date, and exchange rate to use for each purchase order.

• If the purchase order is job-related, get (for each item detail) the contract, project, category, resource (if applicable), billing type and rate, and A/R item number.

To add a purchase order

1. Choose Purchase Order Entry from the P/O Transactions folder to add purchase orders.

2. Use the PO Order Number field to add a new purchase order. Press the Tab key or click the New button.

   If you do not want Purchase Orders to assign the order number, type the new number yourself.
3. Type the vendor number or select it from the Finder. You can also type a new vendor number, not yet added in Accounts Payable.

4. Complete the Purchase Order Information and Vendor Information tabs with the information you need for the purchase order.

5. Add the details, optional field entries (if used) and other information for the purchase order.

6. In multicurrency ledgers, edit the exchange rate information, if necessary.

7. Click the Post button to post the purchase order.

Processing purchase orders
Processing Requisitions

Use Purchase Orders' Requisition Entry form to enter requisitions for purchases you plan to make and for which you need approval before you can issue purchase orders. Requisitions are optional in Purchase Orders. You can enter purchase orders with or without requisition numbers.

Use requisitions to:

• Keep current records of present and expected purchasing needs by entering and updating requisitions as you run low or out of stock in inventory items and supplies.

• Specify the vendor for the items you need to purchase, either by selecting a single vendor number for an entire requisition or by assigning a vendor number to each detail line.

• Create purchase orders from requisitions, either by selecting details and vendors from requisitions when adding a single purchase order, or by automatically creating a series of purchase orders from existing requisitions.

When you enter a requisition, you specify the date on which you need to issue the purchase order. You can also specify an expiration date that lets you delete an unused requisition automatically during Day End Processing, so that you do not have to keep track of and manually clear unwanted requisitions.

When you specify a requisition number on a purchase order, the requisition details that specify the vendor number are automatically included (as are details with no vendor number if you choose to include them). You can change the displayed information and insert and delete detail lines to create exactly the purchase order you need.

Job-related requisitions. If the requisition is for a contract that you manage using Sage ERP Accpac Project and Job Costing, you must also specify a contract and a project for each requisition detail, and, depending on the project type, specify the project category, cost class and resource for the job.

You can print requisitions from Purchase Orders and design the requisition forms you want to use.

Processing Purchase Orders

Use the Purchase Order Entry form to issue new purchase orders and to edit existing purchase orders.

When you post a purchase order, quantities on hand for the ordered items are immediately placed on purchase order in Inventory Control unless the purchase order is job-related.

If the purchase order is job-related, posting updates committed quantities and amounts in Project and Job Costing for the contract, project and category that you specify (and does not change the quantity on purchase order for the inventory location).

You can enter four types of purchase orders:

- **Active** orders you plan to use right away.
- **Future** purchase orders you plan to activate on a future date.
- **Blanket** purchase orders for a specified total amount to which you can post details until the amount is used up.
- **Standing** purchase orders for standard items from which you can issue other types of purchase orders.

For more information about the four types of purchase orders, see [Purchase order type](#).

**Specifying requisition numbers on purchase orders**

You do not have to create requisitions before entering purchase orders. If you do not use requisitions, you enter all the information and details on the purchase order.

If you create requisitions first, the details and most of the other information entered on the requisition appear automatically on the purchase order. You can also choose to include requisition details with no vendor number (when the purchase order vendor is assigned as the item's vendor type) in the purchase order. You can edit all the information from the requisition, and add or delete lines.

**Selecting from more than one requisition**

You can select details from more than one requisition to create a single
purchase order.

When you post a purchase order that references a requisition, the requisition details you include are marked as completed on the requisition, whether you ordered the full quantity or a greater or lesser amount. When you post a purchase order for all the outstanding details on a requisition, the requisition is marked as completed and will be deleted the next time you run Day End Processing, if you do not keep transaction history.

The information you enter to add purchase orders includes:

- **Header information and vendor information.**
- **Detail information** for inventory items, non-stock items (if permitted) and non-inventory items (if your Purchase Orders system allows non-inventory items).
- **Optional field information** (if you use Sage ERP Accpac's Transaction Analysis and Optional Field Creator and you have added optional fields).
- The **exchange rate** for converting amounts from the vendor's currency to the functional currency (in multicurrency ledgers only).
Job-related purchase orders

Job-related purchase orders update Project and Job Costing committed quantities and costs.

- Printing purchase orders
- Using security with purchase orders
- Using templates
Processing Receipts

Use the Receipt Entry form to receive items into inventory.

You can enter receipts with or without purchase order numbers. If you use a purchase order number on a receipt, the purchase order information is displayed.

If you need to edit a receipt you created from a purchase order, you can change the vendor and header information (except for the template and tax group codes), delete item details, and add additional cost details, but you cannot add item details. When editing a posted receipt, you cannot delete any detail lines but you can add additional cost details.

**Note:** You cannot view or edit costs unless you are assigned the security right to "Show Receipt Costing Information."

**Effects on Inventory Control.** When you post a receipt in Purchase Orders, item quantities on hand are increased in Inventory Control for the received items.

If you post the receipt with a purchase order number, quantities on purchase order are reduced in Inventory Control, and the purchase order's received quantities and outstanding quantities are updated on the purchase order.

You can process receipts either in Purchase Orders or Inventory Control. However, we recommend that you enter all receipts in Purchase Orders because Purchase Orders' Receipt Entry form allows you to fully track and prorate additional costs, and record more information for each receipt than you can record in Inventory Control.

When you enter receipts with existing purchase order numbers in Purchase Orders, the purchase orders are updated. They are not updated by receipts you enter in Inventory Control.

If you enter or change additional costs on invoices in Purchase Orders, you can also prorate the new costs to the corresponding receipts.

**Effects on Accounts Payable.** When you enter receipts in Purchase Orders, you can also create and post invoices, credit notes, and debit notes, and transfer the transactions to Sage ERP Accpac Accounts.
Payable.
Job-related receipts

Job-related receipts update Project and Job Costing committed and actual quantities and costs.

For more information, choose from the following topics:

- Calculating prorated additional costs
- Entering receipts
- Entering header information and vendor information
- Entering receipt details
- Entering additional costs
- Expensing job-related additional costs
- Importing receipts
- Prorating additional costs
- Checking receipt totals
- Editing receipts
- Posting receipts
- Printing receiving slips
- Day end processing of receipts
- Using security with receipts

You can also process receipts in Inventory Control. For more information, see Using Purchase Orders with other Sage ERP Accpac programs.

Use the Return Entry form to return items to suppliers, as described under Processing returns.
Processing Invoices

Use the Invoice Entry form to enter invoices for goods received and additional costs billed, to complete receipts and provide information for invoices that are transferred to Accounts Payable from Purchase Orders. You can also look up posted invoices until you clear them from Purchase Orders.
Valid receipt numbers are required

You can enter invoices only for existing receipts. When you post the invoice, the receipt details are completed for the vendor.

When you select a receipt for an invoice, the information entered with the receipt is displayed. You can make any changes you need to the vendor and header information.

You can add new additional costs and prorate them for the receipts used in the invoice. You can delete item and cost details that were posted on a receipt, and you can change the amounts and quantities (if you have rights to change quantities and costs).
Posting invoices to cleared receipts

If you wish to post an invoice for a secondary vendor on a receipt you have cleared from Purchase Orders, post it as a credit note or debit note, using the Credit/Debit Note Entry form, to ensure that all costs are correctly updated.
Job-related invoices

Job-related invoices update Project and Job Costing quantities and costs only if the invoices differ from the posted receipts (which have already updated the committed and actual quantities and costs for the job).

See also

- Entering invoices
- Posting invoices
- Day End Processing of invoices
- Using security with invoices
- Exporting invoices
Processing Returns

You can post returns of items to inventory against existing receipts or against receipts you have already cleared from Purchase Orders. You can also post returns without entering any receipt number.

If you enter a receipt number, the return is to the primary vendor on the receipt. (You cannot post returns to secondary vendors specified on receipts.)

When you post a return, inventory quantities are immediately updated for the returned items in Inventory Control. You can edit posted returns until they are completed (when credit notes are posted).
Job-related returns

Job-related returns update Project and Job Costing actual quantities and costs, reducing the WIP account for the job.

See also

- Entering header and vendor information on returns
- Entering returns for existing receipts
- Entering returns for non-existing receipts
Processing Credit Notes and Debit Notes

You can post credit notes that apply to existing and non-existing (cleared) returns and invoices, as well as credit notes that do not reference returns or invoices. You can post debit notes that apply to existing and non-existing invoices, or just to the vendor.

Credit notes and debit notes are completed when you post them. You cannot recall them after posting to make changes. When you create credit notes from returns, the credit notes complete the returns.

If you use the Keep Transaction History option, you can display posted credit notes and debit notes in the Credit/Debit Note Entry form until you use the Clear History form to clear them from Purchase Orders. If you do not keep transaction history, posted credit notes and debit notes are deleted during Day End Processing (run in Inventory Control).
Effects on Inventory Control

Credit notes that apply to returns affect quantities and costs in Inventory Control only when the credit note adjusts returned quantities and costs.

If you adjust returned quantities on credit notes, posting them adjusts the quantity on hand for the location in Inventory Control for the difference between the quantity returned on the return and the quantity on the credit note.

If you adjust the return costs on the credit note, posting or Day End Processing adjusts the item costs in Inventory Control and creates the appropriate general ledger journal entries.

When credit notes and debit notes are applied to invoices, the transactions affect item costs in Inventory Control, but they do not change item quantities.

**Job-related credit notes.** Job-related credit notes generally arise from returns. They update Project and Job Costing quantities and costs only if the credit note differs from the posted return (which has already reduced the actual quantities and costs in WIP).

See also

Journal Entries Generated by Purchase Orders

This topic describes the general ledger journal entries that are created for Purchase Orders transactions. Purchase Orders journal entries are created in two stages: posting or Day End processing creates inventory entries (or general ledger entries, if you do not use Inventory Control) from receipts and returns, and Accounts Payable posting creates entries from invoices, returns, credit notes, and debit notes. (No general ledger transactions are created from requisitions or purchase orders.)

- If you use the Create Batch form to produce the general ledger transaction batches for Purchase Orders, you can print the G/L Transactions report and check the entries before creating G/L batches.
- If you do not use the option, the transactions are created and the report information deleted by posting or Day End Processing (depending on when you cost inventory), and you must use the G/L Listing in General Ledger to see the information.

**Taxes.** Allocated taxes are posted to the same general ledger accounts as their corresponding item or additional cost details. Recoverable and expensed taxes are posted to the accounts specified for the tax authorities in Tax Services.

For information about the general ledger transactions created for a particular Purchase Orders transaction type, choose from the following:

- Receipts
- Invoices
- Returns
- Credit notes
- Debit notes

**See also**

- Creating general ledger batches
You can import requisitions, purchase orders, and receipts that you previously exported for reuse. You cannot import documents with numbers that you have already assigned in Purchase Orders, unless you have cleared the transactions with those numbers.

The original file from which you imported the information is retained until you delete it.

Purchase orders can include requisition numbers, and receipts can include purchase order numbers. You can import additional cost details for the primary vendor on a receipt, but you cannot import additional costs for secondary vendors.

You cannot import multicurrency requisitions, purchase orders, or receipts into a single-currency Purchase Orders system. Edit a multicurrency import file to remove the multicurrency fields before importing.
You can export all Purchase Orders transaction types, including requisitions, purchase orders, receipts, invoices, returns, credit notes, and debit notes.

Note that Purchase Orders uses more than one database table to store transaction records. If you are exporting any of these records (including additional costs), the Export dialog box shows a list of the tables that you can export for the record once you select the export file type and the file to which to export the data.
For step-by-step instructions on importing or exporting transactions

Click Import or Export on the File menu of a transaction-entry form, then press the F1 key to display System Manager help that will guide you through the import or export process.

About Serialized Inventory Items

Serialized items are goods with serial numbers assigned to them for tracking purposes. For example, an electronics retailer can use serial numbers to record sales of inventory items that have warranty periods.

You may be prompted to assign serial numbers to items when performing the following Purchase Order transactions:

- Receiving inventory purchased from a vendor and entering an invoice
- Returning stock back to a vendor and entering debit or credit notes

When assigning serial numbers in Purchase Orders, you are either generating new serial numbers or selecting from a pool of previously created numbers. The actual management and maintenance of serial numbers is performed using the Sage ERP Accpac Inventory Control application.
Assigning Serial Numbers to P/O Receipts and Invoices

When you receive serialized items from vendors in Purchase Orders, the program prompts you to assign serial numbers.

You use the same procedure when entering a vendor invoice, except you start with the Invoice Entry form instead of the Receipt Entry form.

To assign serial numbers when receiving serialized items:

1. Open the Receipt Entry form, if you haven't already done so.
2. Process the receipt as usual.
3. Enter a value in the Quantity Received field, and then press either the Enter key or the Tab key to display the Serial Numbers Generation/Allocation form.

   If the correct number already appears in the Quantity Received field, and you just want to change a serial number already assigned, click the Zoom button in the Quantity column.

   Note: You cannot partially invoice receipts of serialized items.

4. Either accept or edit the default value that appears in the Next Serial Number field. The value in this field is the starting point for the serial numbers you will assign.

5. Assign serial numbers either automatically or manually:
   - Click the Auto Gen button to generate serial numbers automatically for the quantities you require, starting with the value in the Next Serial Number field.

   Or

   - Click the Add button for each serial number you need to create. Edit the Next Serial Number value if you don't want to assign the next sequential number.

   In both cases, assigned serial numbers appear in the details grid. You can select entries in the grid to change serial numbers as required.

6. Click Close.
If the Remaining value is not zero, there are still serial numbers to assign. You cannot close the form until the Remaining value is zero.

After closing the Serial Numbers Generation/Allocation form, you can complete and post the transaction.

**Assigning Serial Numbers During Receipt Entry or Invoice Entry**

You can assign serial numbers when you receive serialized items, or when you create the invoice for the items, provided the item does not use the serial costing method and the Allow Serial Quantity To Be Different From The Quantity In The Entries option is selected in the I/C Items form.

Generally, there are not big differences in assigning numbers during receipt or invoicing. However, there can be an impact when using the Inventory Control Serial Inquiry report.

Note that if you chose not to assign numbers in the P/O Receipt Entry form, but did so using the P/O Invoice Entry form, the cost that appears in the Inventory Control Serial Inquiry report will be zero, as this inquiry reports only the net change from the time of receipt to invoice, not the original receipt cost. For instance, say you enter the cost of a serialized item as two dollars during receipt entry, but you don't assign the serial number. Then, you use the P/O Invoice Entry form to enter the serial number, and you change the cost of the item to three dollars. The value that appears on the I/C Serial Number Inquiry for that transaction is one dollar.

- P/O Receipt Entry
Assigning Serial Numbers to P/O Returns and Credit/Debit Notes

Purchase Orders prompts you to allocate *serial numbers* when you return serialized items to vendors.

The following procedure also applies when creating a debit or credit note for a vendor, except you are starting from the Credit/Debit Note Entry form instead of the Return Entry form.

**To assign serial numbers to returned serialized items:**

1. Open the Return Entry form, if you haven't already done so.
2. Process the return as usual.
3. Enter a value in the Quantity Returned field for the serialized items you want to return, and press either the Enter or Tab key to display the Serial Numbers Allocation form. If the correct number already appears in the Quantity Returned field, and you just want to change a serial number already allocated, click the Zoom button in the Quantity column.

   If you selected a Receipt Number in the Return Entry form, only serial numbers from that receipt appear in the Serial Numbers Allocation form.

4. If you did *not* select a Receipt Number in the Return Entry form, enter the lot number manually, or select it using the Finder.
5. To return all the serial numbers that appear in the details grid, click Return All. Note that the Return All button in the Return Entry form returns all items on the entire invoice, while the Return All button on the Serial Numbers Allocation form returns all items for the specific detail line previously selected in the Return Entry form.

   To allocate serial numbers automatically, select the Auto-Allocate From checkbox, enter or select a value in the field that appears, and then click the Auto-Alloc button. Available serial numbers appear in the grid.

6. Allocate serial numbers individually by selecting them from the Finder
or by entering the numbers manually.

7. Click Close.

If the Remaining value is not zero, there are still serial numbers to assign. You cannot close the form until the remaining count is zero.

After closing the Serial Numbers Allocation form, you can complete and post the transaction.

See also

Assigning Serial Numbers to P/O Receipts
About Serialized Inventory
P/O Return Entry
Lotted items are goods you sell that have lot numbers assigned to them for tracking purposes. For example, a food distribution company can use lot numbers to record purchases and sales of unique lots. Other industries such as pharmaceuticals and meat-packing are legally required to have traceability for the items that they purchase, manufacture and ship.

Unlike serial numbers, many different items can share the same lot number.

You may be prompted to assign lot numbers to items when performing the following transactions:

- Receiving inventory purchased from a vendor and entering an invoice
- Returning stock back to a vendor and entering debit or credit notes

When assigning lot numbers in Purchase Orders, you are either generating new lot numbers or selecting from a pool of previously created numbers. The actual management and maintenance of lot numbers is performed using the Sage ERP Accpac Inventory Control application.
Assigning Lot Numbers to P/O Receipts and Invoices

When you receive lotted items from vendors in Purchase Orders, the program prompts you to assign lot numbers.

You use the same procedure when entering a vendor invoice, except you start with the Invoice Entry form instead of the Receipt Entry form.

To assign lot numbers when receiving lotted items:

1. Open the Receipt Entry form, if you haven't already done so.
2. Process the receipt as usual.
   
   Lot numbers are stored and displayed by location. Therefore, you must specify a location before entering the quantity.

3. Enter a value in the Quantity Received field, and then press either the Enter key or the Tab key to display the Lot Numbers Generation/Allocation form.
   
   If the correct number already appears in the Quantity Received field, and you just want to change a lot number already assigned, click the Zoom button in the Quantity column.

   **Note**: You cannot partially invoice receipts of lotted items.

4. Specify the number of lots and quantities in each lot using the Make X Lots OR Each Lot Has fields.

5. If desired, edit the default value that appears in the Next Lot Number field. The value in this field is the starting point for the lot numbers you will assign.

6. Assign lot numbers either automatically or manually:
   
   - Click the Auto Gen button and the lot numbers are automatically generated for the quantities you require. The lot numbers will be sequential to the starting value that appears in the Next Lot Number field.

   Or

   - Click the Add button for each lot number you need to create. Edit
the Next Lot Number value if you don't want the assigned numbers to be sequential.

7. Click Close to exit the form. If the Remaining value is not zero, there are still lot numbers to assign and you may not be able to exit the form until the remaining count is zero.

After closing the Lot Numbers Generation/Allocation form, you can complete and post the transaction.

**Assigning Lot Numbers During Receipt Entry or Invoice Entry**

You can assign lot numbers when you receive lotted items or when you create the invoice for the items, provided the item does not use the lot costing method and the Allow Lot Quantity To Be Different From The Quantity In The Entries option is selected in the I/C Items form.

Generally, there are not big differences in assigning numbers during receipt or invoicing. However, there can be an impact when using the Inventory Control Lot Inquiry report.

Note that if you chose not to assign numbers in the PO receipt form, but did so using the PO Invoice form, the cost that appears in the Inventory Control Lot Inquiry report will be zero, as this inquiry reports only the net change from the time of receipt to invoice, not the original receipt cost.

For instance, say you enter the cost of a lotted item as two dollars during receipt entry, but you do not assign the lot number. Then, you use the Invoice Entry form to enter the lot number, and you change the cost of the item to three dollars. The value that appears on the I/C Lot Number Inquiry for that transaction is one dollar.

Assigning Lot Numbers to P/O Returns and Debit/Credit Notes

Purchase Orders prompts you to allocate lot numbers when you return lotted items to vendors.

You also use the following procedure when entering a debit note or a credit note for a vendor, except that you start from the Credit/Debit Note Entry form instead of the Return Entry form.

To assign lot numbers to returned lotted items:

1. Open the Return Entry form, if you haven't already done so.
2. Process the return as usual.
3. Enter a value in the Quantity Returned field for the lotted items you want to return, and press either the Enter or Tab key to display the Lot Numbers Allocation form. If the correct number already appears in the Quantity Returned field, and you just want to change a lot number already allocated, click the Zoom button in the Quantity column.

   - If you selected a Receipt Number in the Return Entry form, only the applicable lot numbers from that receipt are listed in the Lot Numbers Allocation form.
   - If you did not select a Receipt Number in the Return Entry form, then enter the lot number manually or select it using the Finder.

5. If you want to return all the lot numbers that appear in the details grid back to the vendor, click Return All and Yes appears in the Returned column for all items in the grid. Note that the Return All button in the Return Entry form returns all items on the entire invoice, while the Return All button on the Lot Numbers Allocation form returns all items for the specific detail line selected previously in the Return Entry form.

6. To allocate lot numbers automatically, select the Auto-Allocate From checkbox and a field appears for you to enter or select a value. Click the Auto-Alloc button and available lot numbers appear in the grid sequential to the starting value entered.

7. Allocate lot numbers individually by selecting them from the Finder or
by entering the numbers manually.

8. Click Close to exit the form. If the Remaining value is not zero, there are still lot numbers to assign and you may not be able to exit the form until the remaining count is zero.

After closing the Lot Numbers Allocation form, you can complete and post the transaction.

Copy Purchase Orders

The Copy Purchase Orders form lets you select an existing purchase order, or a range of POs, on which to base a new purchase order. The details from the existing POs, including item numbers, quantities ordered, costs, and other information, appear as defaults for the new purchase order.

You can select the details that you want to copy to the new purchase order, and you can change the location, expected arrival date, whether items are drop-shipped, the quantity ordered, cost, unit of measure, unit weight, optional fields for any detail lines, and contract information for job-related orders.

Note:

- You cannot add new detail lines to a purchase order.
- You cannot select different item codes for the detail lines and, if you are copying job-related POs, you cannot change the contract, project, or category.

You can:

- Decide whether to copy or not copy the detail line.
- Change the location, quantity, and costs for the item.

To create a purchase order from one or more existing POs:

1. Choose the Copy Purchase Orders form from the P/O Transactions folder.

2. In the From Vendor Number field, type the code for the vendor whose purchase order details you want to copy for the new PO.

3. In the To Vendor Number field, type the code for the vendor for whom you are creating the new purchase order, or use the Finder or the navigation buttons to select it.

4. In the From PO Number and To PO Number fields, enter the range of existing From Vendor orders to use as the basis for the new purchase order.

5. If the vendors are different and have different tax groups, enter or
select the tax group for the To vendor.

6. Choose the type of PO that you want to copy (Active, Standing, Future, or Blanket).

7. Choose whether you are copying job-related purchase orders.

8. Select the Use PO Cost checkbox if you want to copy costs from the original POs to the new PO that you are creating.

9. Click the Go button (>>) to add the details from the existing purchase orders to the new order.

10. In the PO Number field, type a purchase order number if you wish to assign a number manually, or accept the ***New*** entry to let the program assign the next number in the purchase order number sequence.

11. In the PO Date field, enter or choose the date for the purchase order. The program automatically displays the session date as the PO date.

12. If you need to put the purchase order on hold for some reason, select the On Hold option.

13. Enter a description and a reference for the PO.

14. Use the detail grid on the Copy Purchase Orders form to edit the details as you require.

   To delete a detail line, you simply click the detail line, and then press the Delete key on your keyboard.

15. When you have finished editing information for the purchase order, click the Create button to generate the PO.

You can then view, edit, and post the order using the Purchase Order Entry form.
Credit/Debit Note Entry — Overview

Use this form to:

- Enter credit notes and debit notes from your vendors.
- Review existing credit notes and debit notes.
- Enter new additional costs on credit notes and debit notes.
- Export credit notes and debit notes.
- Assign serial/lot numbers to items if you have the Serialized Inventory and Lot Tracking license installed.

For help on particular tasks, choose one of the following topics:

- Day End Processing of credit notes and debit notes
- Editing currency exchange rates
- Editing tax information
- Entering additional costs on credit notes and debit notes
- Entering credit notes and debit notes
- Exporting credit notes and debit notes
- Posting credit notes and debit notes
- Processing credit notes and debit notes
- Using security with credit notes and debit notes
- Assigning Serial Numbers to Credit/Debit Notes
- Assigning Lot Numbers to Credit/Debit Notes

Before you start

Before entering credit notes and debit notes:

- Post any invoices or returns for which you are being credited or debited.
- Make sure you have complete information for each transaction. Once you post a credit note or debit note, it is completed, and you cannot edit it.
- Find out the credit note or debit note number to use.

Click one of the links below for help on using the corresponding tab:

<table>
<thead>
<tr>
<th>Credit/Debit</th>
<th>Taxes</th>
<th>Retainage</th>
<th>Additional Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Optional Fields</td>
<td>Rates</td>
<td>Totals</td>
<td></td>
</tr>
</tbody>
</table>

Use the Post button to post the credit note or debit note. Note that you cannot edit credit notes or debit notes after posting them.
Use the History button to open the Purchase History form and check information about the items you have purchased from your vendors.

Use the Close button to close the Credit/Debit Note Entry form.

Use the Post button to post the purchase order or to post changes you have made to existing purchase orders.

Use the History button to open the Purchase History form and check information about the items you have purchased from your vendors.

Use the Close button to close the Purchase Order Entry form.
To find out about additional forms that you can open from the Purchase Order form, choose from the following:

- Bill-To Location
- Comments/Instructions
- Item Tax Distribution
- Drop-Ship Address
- Create PO From Requisition
- Ship-To Location

Click these icons for information about using the corresponding buttons:

**Before you start**

Before you enter new purchase orders, you should define the following Purchase Orders information:

- Ship-via codes
- Templates

In Accounts Payable:

- Define the terms codes you want to use for the purchase orders you will enter.
- Add records for the vendors for whom you will enter purchase orders (you can also enter purchase orders with vendor numbers you have not yet added to Accounts Payable, then add the vendors to Accounts Payable later).

You should also use the Options form to:

- Edit or verify the lengths, prefixes, and numbers you want the program to assign to purchase orders, if you want the numbers assigned automatically.
- Select the options to use when processing purchase orders.
- Select a default template code (optional).
- Define any optional fields you want to add to the Purchase Order Entry form.
You must also set up the following information:

- Tax records in Common Services.
- Currency records (multicurrency ledgers) in Common Services.

**Non-existent vendor records.** You can enter a purchase order for a vendor who is not in Accounts Payable, but you must add the vendor before you post an invoice, credit note, or debit note for that vendor in Accounts Payable.

**One-time vendors.** If you frequently make one-time cash purchases, create a record for one-time vendors in Accounts Payable.

- Item, price list, location, account set, and category records in Inventory Control.

Receipt Entry — Overview

Use this Form to:

• Enter receipts of goods into Purchase Orders—for inventory or non-inventory items.
• Edit existing receipts.
• Enter or change the vendor address information.
• Enter additional costs for receipts (from primary or secondary vendors).
• Invoice receipts and additional costs.
• Identify items as fixed assets for management by the Sage Fixed Assets (FAS) module.
• Specify drop-ship addresses for receipt details.
• Check and edit tax distributions by detail line and for the primary and secondary vendors.
• Import and export receipts.
• Assign serial numbers to serialized items (if you have the Serialized Inventory and Lot Tracking license installed as part of Sage ERP Accpac Inventory Control).
• Assign lot numbers to lotted items (if you have the Serialized Inventory and Lot Tracking license installed as part of Sage ERP Accpac Inventory Control).

Note: If users do not have the "Show Receipt Costing Information" security right, they will not be able to view item unit cost information on receipts.

All cost amounts will be hidden — including totals, taxes, discounts, and additional cost amounts. (In other words, the Taxes tab, Additional Costs tab, and Totals tab will not appear on the Receipt Entry form for users who do not have this right.)

Integration with Sage Fixed Assets (FAS)
If you use Sage Fixed Assets system (FAS) to manage the fixed assets in your company, you can also mark received goods as fixed assets, and choose the FAS template that you want to use for the new asset. Sage Accpac ERP will transfer the asset information to FAS when you run Create Assets in the FAS Integration module.

**Before you enter receipts you need to:**

1. Set up the following Purchase Orders records:
   - Additional cost codes
   - Optional fields (if you use them)
   - Ship-via codes
   - Templates

2. Set up related records in other Sage Accpac programs.

3. Choose options for receipts on the Options form.

For more information about the Receipt Entry form, click the links below for help on using the corresponding tabs:

<table>
<thead>
<tr>
<th>Receipt</th>
<th>Taxes</th>
<th>Retainage</th>
<th>Additional Costs</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

To find out about additional forms you can open from Receipt Entry, choose from the following:

- Additional Cost Vendor Taxes
- Bill-To Location
- Comments
- Create Receipt from PO
- Detail Item/Taxes form
- Detail Costs/Taxes form
- Drop-Ship Address
- Invoice form
- Purchase History form
- Optional Fields in receipt details
- Ship-To Location
- Serialized Inventory Pop-ups
- Lot Tracking Pop-ups

- Use the Post button to post the receipt. Note that you cannot edit receipts after posting them.

- Use the Calculate Taxes button to recalculate tax amounts after you change the Tax Class or Tax Included field. (Tax amounts are not automatically calculated until you choose Post for the invoice or select
Use the Receive All button to add to the Receipt Entry form all the detail lines from the specified purchase orders. If working with serialized/lotted items, however, you cannot use the receive all button as you will need to assign serial/lot numbers manually.

Use the Close button to close the Receipt Entry form.

- Using P/O with Sage Fixed Assets (FAS)
This form lets you:

- Enter requisitions for purchases you plan to make and for which you may need approval before you can create purchase orders.
- Edit or delete requisitions you posted previously.
- Print requisitions.
- Import requisitions from other Sage ERP Accpac databases or from non-Sage ERP Accpac programs.
- Export requisitions to other Sage ERP Accpac databases or non-Sage ERP Accpac programs.

Requisitions are optional in Purchase Orders. You can enter purchase orders with or without requisition numbers.

If you use requisitions, Purchase Orders provides you with a requisition approval system to enforce purchase approvals. For more information, see [requiring approval for requisitions](#).

You can make changes to requisitions and individual requisition detail lines until they are completed. When you post a purchase order that uses a requisition detail, the detail is completed, regardless of the quantity that was ordered.

Click these icons for information about using the buttons:

- **Finder**
- **Navigation buttons**
- **Zoom**
- **New**

Use the Post button to post the requisition or the changes you have made to an existing requisition.

Use the History button to open the [Purchase History](#) form and check information about the items you have purchased from your vendors.

Click one of the links below for help on using the corresponding tab:

Return Entry Form — Overview

Use this form to:

- Enter, edit, and post returns of merchandise to vendors.
- Export returns to non-Sage Accpac programs and other Sage ERP Accpac Purchase Orders databases.
- Assign serial/lot numbers to returned items if you have theSerialized Inventory and Lot Tracking license installed.

For help on particular tasks, choose one of the following topics:
- Day End Processing of returns
- Editing currency exchange rates
- Editing tax information
- Editing returns
- Entering returns
- Exporting returns
- Posting returns
- Processing returns
- Using security with returns

Before you start

- Use the Options form to assign or verify the length, prefix, and next number for Purchase Orders to assign to returns, if you want to assign numbers automatically.
- Post any receipts from which you are returning items.

Preparing to enter returns

Before entering returns, make sure you have complete information for each return, including:

- Vendor number.
- Return number (if you assign your document numbers).
- Receipt number, if any.
- All returned item numbers and corresponding locations, units of measure, and quantities to return.

After using

Run Day End Processing in Inventory Control to:
• Update inventory records.
• Create general ledger entries from returns.
• Create the Returns Posting Journal of the transactions you posted in Purchase Orders since the last time you ran Day End Processing.
• Print the Returns Posting Journal to check the returns you posted.

Click the links below for help on using the corresponding tabs:

<table>
<thead>

Creating Purchase Orders Automatically

You can create purchase orders automatically, from current requisitions, from reorder quantities in Inventory Control, and from active sales orders in Order Entry.

Assigning purchase order numbers. When creating purchase orders automatically, the program assigns the purchase order numbers, using the length, prefix, and next number specified in the Options form. The program also selects Active as the purchase order type, posts the purchase orders, and increases quantities on purchase order in Inventory Control.

You can automatically create purchase orders only for active items, locations (if you use Inventory Control), and vendors. Inventory Control must also allow the items at all locations for which they are ordered, if you use that program.

After posting, the program displays the number of purchase orders that were created. You use the Purchase Orders choice in the Forms folder to print the new purchase orders. Use the Purchase Order Entry form to review and edit new purchase orders you create automatically.

Assigning entries for optional fields. You can specify entries for any optional fields that you use. All the new purchase orders will then have these entries in their optional fields, but you can change them if necessary.

Create Purchase Orders from Inventory Control

To create purchase orders:

1. Open Purchase Orders > P/O Create Purchase Orders > Create POs from I/C. 
   
   [Click here for help on Create POs from I/C fields.]

2. Enter the run date.
   
   You enter a run date to identify the reorder period used to determine order quantities, and set the purchase order date.

3. Specify the vendor number and the ranges of item numbers and locations for which to create purchase orders.

4. Choose to create POs for a specific location or for all locations.

5. Select the vendor types to include.
   
   Items in the range you specified are selected if the vendor number for which you are creating a purchase order is specified as one of the selected vendor types in the vendor details record.

   This allows you to create POs only if a vendor is listed as Vendor 1 or Vendor 2 for an inventory item.

6. Select the method for determining which item numbers to order.
   
   [All Items.]
   [Items Below Minimum.]
   [Items Below Projected Sales for [ ] Days.]

7. Select the method for determining item quantities.

   [Up to Maximum.]
   [Above Maximum.]
   [Up to Projected Sales for [ ] Days.]
   [Above Projected Sales for [ ] Days.]

8. Click the Optional Fields tab (if you use optional fields on the purchase orders form), and specify entries for the optional fields that appear on the purchase orders.
9. Click the Detail Optional Fields tab (if you use optional fields with purchase order details), and specify entries for the optional fields that appear on detail lines.

10. Click the Process button to create the purchase orders.

   The program creates a purchase order for each vendor in the ranges you specified.

   When the purchase orders have been posted, you see a message that lists the range of purchase order numbers that were assigned.

   **Note:** If vendor accounts are on hold, the purchase orders will be created, but the POs will be On Hold.
Creating Purchase Orders from Order Entry Sales Orders

Overview

To create purchase orders:

1. Open Purchase Orders > P/O Create Purchase Orders > Create POs from O/E.

   Click here for help on Create POs from O/E fields.

2. Specify the ranges of customers, orders, order dates, and expected ship dates by which to select the purchase orders to create.

3. Select the vendor type.

4. Choose whether to create purchase orders by vendor number (producing only one purchase order for each vendor), or create a separate purchase order for each order number and each vendor listed on the order (choose Order).

5. Choose whether to order all items on the selected orders, or only items for which you have insufficient quantities on hand, or only for items that are on backorder.

6. Choose whether to include drop-ship addresses entered for items and customers on the Order Entry orders. If you choose this option, you cannot consolidate details.

   If you use the Drop-Ship Items option, every purchase order detail is assigned either the address entered on the sales order or the customer's address in Accounts Receivable.

7. Choose whether to consolidate details on the purchase orders with the same item number, location, and unit of measure into single details on purchase orders.

   Note: The Consolidate Items checkbox is disabled if any optional fields or detail optional fields are assigned to this form.

8. Choose whether to include non-stock items on the purchase order.

   If you do not choose the option, non-stock items will be omitted from
the Finder and treated as non-inventory items. (This option appears only if you allow receipt of non-stock items in Inventory Control.)

9. Click the Optional Fields tab (if you use optional fields on the purchase orders form), and specify entries for the optional fields that appear on the purchase orders.

10. Click the Detail Optional Fields tab (if you use optional fields with purchase order details), and specify entries for the optional fields that appear on detail lines.

11. Click the Process button to create the purchase orders.

   If you create purchase orders by vendor number, all orders for the same item, location, and vendor are consolidated into a single detail on the purchase order for the vendor.

   If you create purchase orders by sales order, you produce a separate purchase order for each vendor specified on the selected orders, resulting in more than one purchase order for vendors specified on more than one order. This option retains order numbers and lets you print the Shippable Backorders report for the transactions you post for Order Entry orders.

Related topics
Creating Purchase Orders from Requisitions

You can create purchase orders from requisitions as follows:

- Using the Purchase Order Entry form, you can:
  - Specify a requisition number on a purchase order. The program then displays the information entered for the requisition, including detail lines that specify the vendor number and, optionally, detail lines that have no vendor number.
  - Select more than one requisition number for a single purchase order, to add details from different requisitions posted for the vendor (and for blank vendors, if desired) to a single purchase order.
  - Select item details with no vendor number when the purchase order vendor is specified as the vendor type in the item records.
  - Consolidate like detail lines into single lines.

  For information about the Purchase Order Entry form, see Processing purchase orders.

- Using the Create POs From Requisitions form, you can create purchase orders automatically from requisitions, specifying a range of requisitions, requisition dates, and vendors from which to create purchase orders and, optionally, consolidating item details from more than one requisition into single details on purchase orders.

  You can also create purchase orders from requisitions that contain detail lines without vendor numbers and you can specify entries for any optional fields you use.

  For more information, see Automatically creating purchase orders from requisitions.
Create Purchase Orders Automatically Security Access

The Purchase Orders security choice "Create Purchase Orders Automatically" (in the Security Groups form in Administrative Services) allows you to:

- Automatically create purchase orders using the Create POs From Requisitions, Create POs From I/C, and Create POs From O/E (if you have Transaction Inquiry security rights in Order Entry) icons in the Create Purchase Orders folder.
Create POs From IC Form

Use this form to automatically create purchase orders from the reorder quantities you have defined for items in Inventory Control.

Note that the vendors must exist and be valid before you can create Purchase Orders.

For background information, see Creating purchase orders from Inventory Control reorder quantities.

Click these icons for information about using the buttons:

Finder  
Drop-Down Lists

Use the Process button to create and post the purchase orders you specified.

Use the Close button to close the Create POs from IC form.

Before you begin

- Set up or update reorder information in Inventory Control's Reorder Quantities form.
- Assign vendor types to item records using the Vendor Details form in Inventory Control.
- Determine the vendors, items, and locations for which you want to create purchase orders.
- Determine the run date to use to select reorder periods from Inventory Control and to assign to the purchase orders you create.
- Determine the methods by which to select items and quantities to order.
- Decide what information you need for purchase order optional fields and purchase order detail optional fields.
- Choose Reorder Report from the Stock Control Reports form in Inventory Control to print a report of the quantities you need to order.

Create POs From Requisitions Form

Use this form to automatically create purchase orders from the requisitions you have added in Purchase Orders.

For background information, see Creating purchase orders from requisitions.

Click these icons for information about using the buttons:

Finder  Drop-Down Lists

Use the Process button to create and post the purchase orders you specified.

Use the Close button to close the Create POs from Requisitions form.

Note:

- The Consolidate Items checkbox is disabled if any optional fields or detail optional fields are assigned to this form.

- You cannot mix job-related and non-job-related requisitions when creating purchase orders. If you are creating POs from both types of requisitions, you must run this function twice.
Before you begin

- Use the Requisition Entry form to create or import requisitions.
- Determine the requisitions, vendors, and dates for which you want to create purchase orders.
- If you are using Project and Job Costing, choose either job-related or non-job-related requisitions.
- In Accounts Payable:
  - Add any new vendor numbers used in requisitions for which you want to create purchase orders. (The program cannot create purchase orders for vendor numbers that are not defined in Accounts Payable.)
  - Make sure the vendor numbers you want to use are all active. You cannot create purchase orders for inactive vendors.
- In Inventory Control, make sure that:
  - All items you are ordering for a location are allowed at the location.
  - You specified only active items and locations on the requisitions for which to create purchase orders.
- Choose Transaction List from the Analytical Reports folder, then print a detailed list of the requisitions from which you are ready to create purchase orders. Make any changes you need to the requisitions, using the Requisition Entry form.

Entering Statistics for the Current and Previous Periods

To add statistical information during setup or edit it later, you must first select the Accumulate (purchase) Statistics and Allow Edit Of Statistics options in the Options form.

If you set up Inventory Control and Purchase Orders together, partway through a fiscal year, you may also want to add statistical data for the year to date and previous years. You should add any of the data that you wish to view online or print on reports.

Transactions and statistics

Depending on the history and statistical options you select, Purchase Orders automatically updates statistical information with every transaction that you post. The program keeps this data until you choose to clear it using the Clear History form.

Entering Statistics from Your Previous Purchase Orders System

If you use the Accumulate Statistics option, Purchase Orders creates statistics from each transaction you post. If you also use the Allow Edit Of Statistics option, you can manually enter statistics from prior periods in your old purchase order system when you are setting up your new Purchase Orders system.

You use the Purchase Statistics form to add the data to your Purchase Orders system, and to look at the data online or print the data on the Purchase Statistics report.

For each period, you can enter:

- Number of purchase orders, receipts, invoices, and credit notes and debit notes.
- Net quantity purchased and net purchase amount.
- Net invoice amount.
- Average invoice, credit note, and debit note amounts.
- Largest and smallest invoice, credit note, and debit note amounts,
and the vendors who issued them.

**Do not add the same statistics twice.** If you post opening and year-to-date transactions to set up your new Purchase Orders system, Purchase Orders will also create statistics for these transactions and periods (if you use the Accumulate Statistics option). If you are also adding statistical data you want to keep in Purchase Orders, be careful not to duplicate statistics that the program has already created for you.

For more information about the historical information you can keep in Purchase Orders, see [Accumulating purchasing history and statistics for reporting](#).

**See also**
- [Purchase Statistics report](#)
- [Steps for setting up Purchase Orders](#)
The Purchase History form appears when you select Statistics and Inquires > Purchase History. Use this form to:

- Review purchasing data that is kept by Purchase Orders when you use the Keep Purchase History option.
- Select the Details button to see details of a select transaction.

You can also open this form using the History button in the Requisition Entry, Purchase Order Entry, Receipt Entry, Invoice Entry, Return Entry, and Credit/Debit Note Entry forms to check the purchase history for an item or vendor while entering a transaction.

The form displays all purchases and returns of items for the fiscal or calendar years and periods for which you keep history.

Click these icons for information about using the buttons:

Finder  Drop-Down Lists

Before using

- Select the Accumulate Purchase History option in the P/O Options form.
- Specify the type of year and period by which you want to accumulate purchase history.

To review purchase history

1. Select Statistics and Inquiries > Purchase History, or click the History button in a Purchase Order transaction-entry form.
2. Select whether to sort by Item Number or Vendor Number.
3. If you use multicurrency accounting, choose Functional Currency or Vendor Currency.
4. Type the item number or vendor number, or select it from the Finder.
5. Click the Go button (►) or press the F7 key.
6. To view the transaction details for an item or vendor entry, double-click on the line for which you want more information, or select the line
and click the Details button. The Purchase History Detail form appears.

7. For applicable transactions that appear in the Purchase History Detail form, you can select the entry in the grid and click the Serial/Lot Numbers button to display the serial and/or lot numbers in the specified transaction.

To view purchase history for a range of item numbers, vendor numbers, and reporting periods

1. Choose the Purchase History icon from the P/O Analytical Reports folder, or click Print on the File menu on the Purchase History form.

2. Print the Purchase History report.
To view the details of a transaction

Click the Details button while reviewing history to see the details of the transactions posted for a particular vendor or item number.

Click the Close button in the detail form to return to the main Purchase History form.

Purchase History form
Pending Receipts Inquiry

This form lets you review items that are expected to arrive at particular locations within a given time period (for example, in the next 7 days) and whether there will be sufficient stock to cover sales orders.

Purchase Orders lets you search pending receipts by item number or by vendor, and also lets you view completed purchase orders to see if items were delivered within the expected arrival times.

The inquiry finds active, standing, future, blanket, or all purchase orders that are not on hold and that fit the selection criteria. You can limit the inquiry to specific locations.

To inquire on pending receipts:

1. Choose Pending Receipts Inquiry from the P/O Statistics and Inquiries folder.
2. Choose whether you want to inquire by item or by vendor, and then select the item number or vendor number for which you want to view details.
3. Select a range of locations, or skip the Location fields to display all locations.
4. In the PO Date fields, leave the From and To fields with the defaults to include all purchase orders, or specify a range of PO dates.
5. In the Expected Arrival Date fields, leave the From field blank to include all purchase orders with outstanding items, and enter the end date for the inquiry in the To field.
6. In the PO Type field, select from All, Active, Standing, Future, or Blanket purchase orders.
7. Choose Include Completed Detail Lines to see if items were delivered within the expected arrival times.
8. Choose Show Late POs Only to see incomplete detail lines that are past their expected arrival dates.
9. Click the Go button (➤).
The program fills in the detail grid with PO line information that matches the select criteria that you specified:

- Purchase Order Number
- Item Number or Vendor Number
- Item Description or Vendor Name
- PO Type
- Location
- PO Date
- Quantity Ordered
- Unit of Measure
- Expected Arrival Date
- Date Received
- Days Late
- Completed

10. To view more information for any PO line item — such as receipt quantities and days late — double-click the PO line on the detail grid, or select the line and click the Details button.

The program displays the following additional information for each receipt associated with the PO line:

- Receipt Number
- Location
- Contract, Project, Category (if job-related)
- Quantity Ordered
- Order Unit of Measure
- Quantity Received
- Receipt Unit of Measure
- Date Received
- Expected Arrival Date
- Days Late
Day End Processing — Overview

When you post Purchase Orders transactions that affect item quantities, the program will immediately update item records and quantities on purchase order in Inventory Control, if you are using it.

However, unless you cost inventory during posting, you must run Day End Processing to completely update your Purchase Orders, Inventory Control, Accounts Payable, and Project and Job Costing data.

Each time you run Day End Processing, the program:

- Processes all the transactions you have posted since the last time you ran Day End Processing.
- Creates a batch of Accounts Payable invoices, credit notes, and debit notes from posted Purchase Orders transactions, using the next available Accounts Payable batch number.
- Creates general ledger transactions from posted receipts, returns, invoices, credit notes, and debit notes.
- Optionally posts Accounts Payable and General Ledger batches in the A/P and G/L modules.
- Updates costs in Inventory Control for non-job-related invoices, if you use Inventory Control (unless you chose the Inventory Control option to do costing during posting).
- Updates quantities and costs in Project and Job Costing for job-related invoices.
- Activates and posts future purchase orders that have reached their purchase order date. When Day End Processing is complete, you can print the new POs.
- Clears requisitions that have reached their expiration dates.
- Deletes completed transactions if you do not keep transaction history.
- Updates statistics and history in both Purchase Orders and Inventory Control (if you keep history and statistics).
- Creates the receipt, invoice, return, and credit/debit note posting journals in Purchase Orders for the new day-end sequence number.
**Note:** Most Day End Processing tasks will be performed during posting if you choose the Inventory Control option to cost inventory items during posting and to create subledger transactions and audit information during posting.

Note also that if you use Inventory Control, you run Day End Processing from the Inventory Control folder. If you do not use Inventory Control, you run Day End Processing from the Purchase Orders folder. (For more information about running Day End Processing in a stand-alone system, see [Day End Processing in a Stand-Alone Purchase Orders System](#).)

You should run Day End Processing as part of your daily routine, to keep your audit trail and reports up to date. You can run Day End Processing as many times a day as you want.

**Warning!** The time it takes to complete day-end processing varies according to your computer and the number of transactions you entered since the last time you ran Day End Processing. We recommend that you run Day End Processing when you do not need to use your computer for other tasks. You might find it best to run it overnight.

**Assign the default cost expense account first.** Before running Day End Processing, you must assign the general ledger account code for the default cost expense account in Purchase Orders' Options form. Day End Processing will display an error message and stop processing if the account is not designated.

**Locked fiscal periods**

Note that if a fiscal period is locked for General Ledger but not for Purchase Orders, you can create batches for General Ledger during posting, during Day End Processing, or using the Create G/L Batch icon (depending on your system and settings). When you try to post transactions to a locked period in General Ledger, however, the transactions will be placed in an error batch. You can avoid this situation if you create and post General Ledger batches for outstanding Purchase Orders transactions *before* locking the period for General Ledger.

Similarly, you can create transactions for Accounts Payable from Purchase Orders transactions, but you cannot post them to a period that is locked for Accounts Payable.
For more information, select from the following:

Before Running Day End Processing
Day End Processing in a Stand-Alone Program

Day End Processing of Receipts
Day End Processing of Returns
Periodic Processing Overview

This topic outlines tasks you might follow as part of your weekly, bi-weekly, or monthly procedures, and tells you how to use Purchase Orders to accomplish these tasks.

Use the Create Batch form (unless you create transactions during posting or day end processing) and Clear History form to complete processing and to clear out obsolete data and records at the end of your accounting periods.

At each period end, you should:

1. Create any new purchase orders you wish to process in the period.
   
   Use the Purchase Order Entry form and the Create Purchase Orders From Requisitions, Create Purchase Orders From I/C, and Create Purchase Orders From O/E forms.

2. Post other transactions that apply to the period.
   
   Use the Requisition Entry, Purchase Order Entry, Receipt Entry, Invoice Entry, Return Entry, and Credit/Debit Note Entry forms.

3. Print the Purchase Order Action and Aged Purchase Orders reports to identify purchase orders that require action.
   
   Use the Purchase Order Action and Aged Purchase Orders forms from the Analytical Reports folder to print the reports.

4. Print the G/L Transactions report, then create general ledger transactions (if you do not use the option to create general ledger transactions during posting or Day End Processing). Process the batches in Sage ERP Accpac General Ledger, if you use it, or post them manually to another general ledger.

   Choose the G/L Transactions icon from the Processing Reports form to print the report. Choose the Create Batch form from the Periodic Processing folder to create the general ledger transactions.

5. Clear the paid transactions, posting journals, and statistics that you no longer need.

   Choose the Clear History form from the Periodic Processing folder to
clear this information.

Sage Accpac will mark reports as printed no matter which print destination you use when you print posting journals.

6. If you use Purchase Orders as a stand-alone program (without Inventory Control), use the Delete Inactive Records form to delete inactive item and account set records from your Purchase orders system.

Choose the Delete Inactive Records icon from the Periodic Processing folder and specify the types and ranges of records you want to clear.
Reporting Purchase Orders Data

Purchase Orders prints a variety of reports to help you manage your requisitions, purchase orders, invoices, receipts, returns, credit notes, and debit notes. Printed reports also serve as a source of backup information in case the data is damaged.

This section contains an overview of the Purchase Orders reports. For printing instructions and information about report contents, see Purchase Orders reports. For information about how to change, export, and e-mail reports, see Crystal reports.
Printing reports

There are five ways you can print reports in Purchase Orders:

• Print directly from the program to the printer, to obtain permanent copies of the information.
• Print the information on your screen, for quick review.
• Print to a file for printing later, importing into another program, or transferring to a diskette.
• Print to an e-mail message that you will send to someone else.
• Schedule the report for printing later on a network.

You can print all Purchase Orders reports on 8½-inch x 11-inch paper or A4 paper.
Setup reports

Using the Setup Reports folder, you can print reports of the records you created when setting up or updating your Purchase Orders system, including:
- Additional cost codes
- Account Sets (stand-alone program)
- E-mail Messages
- Items (stand-alone program)
- Optional fields
- Options
- Ship-via codes
- Templates
- Vendor details (stand-alone program)

Any time you add, delete, or change any of these records, you should print and file the corresponding reports, to keep your printed records up to date.
Analytical reports

Purchase Orders provides reports you can use to analyze purchases. There are also reports about the Purchase Orders transactions you post (receipts, invoices, returns, debit notes, and credit notes), and the journal entries created for the general ledger from these transactions.

Use the icons in the Analytical Reports folder to print the following Purchase Orders transaction and analysis reports:

Aged Purchase Orders
G/L Transactions
Item Transaction History (stand-alone program)
Payables Clearing Audit
Posting Journals
Purchase History
Purchase Order Action
Purchase Statistics
Shippable Backorders
Transaction List

General ledger transactions. If you use the option to create general ledger transactions using the Create G/L Batch form, rather than creating them during posting or Day End Processing, you can print the G/L Transactions report in Purchase Orders.
Printing and E-mailing Forms

Purchase Orders provides standard forms and e-mail messages for producing copies of the following transactions to send to vendors or use internally:

- Mailing Labels
- Purchase Orders — print or e-mail
- Receiving Slips
- Requisitions
- Returns — print or e-mail

If you want to email purchase orders and returns to vendors, you use the Email Messages form in the P/O Setup folder to create the email messages that you want to send to vendors.

For each vendor that you want to email, you must set the Delivery Method to Email or to Contact's Email on the Processing tab of the vendor record in Accounts Payable.

You use the same icons in the Forms folder to print forms or send e-mail messages to vendors.

For information about adapting the sample forms to match your requirements or creating your own, choose the System Manager online documentation "Customizing Printed Forms with Crystal Reports" (from the Help menu). The file opens in Acrobat Reader.
Clear History Form — Overview

Use the Clear History form to selectively clear (delete) data you no longer want to keep in your Purchase Orders system. This form lets you clear:

- Transaction history.
- Purchasing history.
- Purchase statistics.
- Printed posting journals.
- Payables Clearing Audit list.
- If you do not use Inventory Control, item transaction history.

You can clear one or more types of data at the same time.
Before you start

- Run Day End Processing to update Purchase Orders transactions and statistics that could affect records you want to clear.
- Determine the date through which to clear transaction history.
- Determine the fiscal year and period through which to clear purchase statistics and purchasing history.
- Determine the day-end number through which to clear printed posting journals and the types of journals to clear.
- Print reports of the data you want to clear. For example:
  - Before clearing transaction history, print the Transaction List for the transaction history you plan to clear. Also, make sure you have printed copies of any completed requisitions, purchase orders, receiving slips, and returns you require.
  - Before clearing purchase history, print the Purchase History report for the historical data you plan to clear.
  - Before clearing sales statistics, print the Purchase Statistics report for the statistics you plan to clear.
  - Before clearing posting journals, print a copy of each posting journal you want to clear. (Make sure you have printed the posting journals to a printer or a file.)
    If you use the Create Batch icon to create the general ledger batch, print the G/L Transactions report for the journals. Note that you must print the G/L Transactions report before you use the Create Batch icon.
  - Before clearing the Payables Clearing Audit list, print the Payables Clearing Audit list for the year, period, and account sets you want to clear.
  - Before clearing item transaction history (in stand-alone systems only), print the Item Transaction History report for the period you plan to clear.

To use the Clear History form
1. Choose Clear History from the Periodic Processing folder.

2. To clear transaction history, select the Transaction History option, then type the date up to which to clear history.

3. To clear purchase history, select the Purchasing History option, then select the year and period up to which to clear history, and the range and type of records to clear.

4. To clear purchase statistics, select the Purchase Statistics option, then select the year and period up to which to clear statistics.

5. To clear printed posting journals, select the Printed Posting Journals option, then select the type of posting journal to clear and the day-end number up to which to clear.

6. To clear the Payables Clearing Audit list, select the list and the year, period, and the account sets to clear.

7. To clear item transaction history, select the Item Transaction History option, then select the year and period through which to clear data. (This option is available only a stand-alone Purchase Orders system.)

8. Select Process to clear the specified data.

You use the following buttons in the Clear History form:

- Process — to clear the selected data.
- Close — to close the Clear History form.

Create G/L batch
Periodic processing
Create Batch Form — Overview

Use this form to:

- Produce a batch of general ledger transactions (or append to an existing general ledger batch) from the receipt, invoice, return, credit note, and debit note transactions you posted in Purchase Orders.

  You can use this form to produce G/L batches only if you selected On Request Using Create Batch Icon for the Create G/L Transactions option in the G/L Integration form.

- Post a batch of invoices in Accounts Payable from invoices or credit/debit notes posted in Purchase Orders.

  You can use this form to post A/P invoices only if you selected On Request Using Create Batch Icon for the Post A/P Batches option in the P/O Options form.

If you do not use Sage ERP Accpac General Ledger, or if your Sage ERP Accpac General Ledger system is at another location, Purchase Orders appends its general ledger transactions to a file called pogltran.csv, which can be imported by an Sage ERP Accpac General Ledger at another site, or transferred to another general ledger that you use. The file is in a Comma Separated Values (CSV) format, and is created in the same directory as your company database.

Note that if you do not use Sage ERP Accpac General Ledger in the same database as Purchase Orders, all general ledger transactions are placed in the same CSV file, and that each time Purchase Orders creates transactions it asks whether to add to the file, or replace it.

Before you begin

- Select the On Request Using Create Batch Icon and other general ledger options on the Integration tab of the G/L Integration form.

- Select the On Request Using Create Batch Icon for the Post A/P Batches option in the P/O Options form.

- Run Day End Processing in to update the company’s Purchase Orders data.

- Print the G/L Transactions report, then file it with your audit trail reports. (You
must print the report before using the Create Batch form. When you create general ledger transactions, the data for the G/L Transactions report is deleted from Purchase Orders.)

**Locked fiscal periods**

Note that if a fiscal period is locked for General Ledger but not for Purchase Orders, you can create batches for General Ledger during posting, during Day End Processing, or using the Create G/L Batch icon (depending on your system and settings). When you try to post transactions to a locked period in General Ledger, however, the transactions will be placed in an error batch. You can avoid this situation if you create and post General Ledger batches for outstanding Purchase Orders transactions *before* locking the period for General Ledger.

Similarly, you can create transactions for Accounts Payable from Purchase Orders transactions, but you cannot post them to a period that is locked for Accounts Payable.

**To create the general ledger batch (and optionally post it in G/L)**

1. Choose the Create Batch icon from the Periodic Processing folder.
2. Select the Create G/L Batch option.
3. Specify the day-end number up to which to create general ledger transactions. (You create the transactions for all outstanding day-end numbers up to and including the number you specify.)
4. Click Process.

Depending on the options you chose in the G/L Integration form, Purchase Orders will create and optionally post the G/L batch in the General Ledger module.

**To post the A/P Invoice batch in Accounts Payable**

1. Choose the Create Batch icon from the Periodic Processing folder.
2. Select the Post A/P option.
3. Click Process.

**After using**

- Post the batches in Sage ERP Accpac General Ledger, if you use it.
• If you use a different general ledger, import the CSV batch file into your general ledger, then delete the file.

  Or

  Using the G/L Transactions report, transfer the entries to your general ledger manually, then delete the CSV batch file.

You use the following buttons in the Create Batch form:

• Click the Process button to create the general ledger batch.
• Click the Close button to close the Create Batch form.

  Periodic processing
Day End Processing in a Stand-Alone Purchase Orders System

If you use Purchase Orders as a stand-alone program (without Inventory Control), you choose Day End Processing from the Periodic Processing folder in Purchase Orders, rather than from Inventory Control.

Unless you cost inventory during transaction posting, you must run Day End Processing to update your audit trail and item statistics, to create general ledger inventory/expense transactions, and to update your Accounts Payable data.

**Note:** Most Day End Processing tasks will be performed during posting if you choose the Purchase Orders option to cost inventory items during posting.

**Warning!** The time it takes to complete day-end processing varies according to your computer and the number of transactions you entered since the last time you ran Day End Processing. We recommend that you run Day End Processing when you do not need to use your computer for other tasks. You might find it best to run it overnight.

**Assign the default cost expense account first.** Before running Day End Processing, you must assign a default cost expense account in the Purchase Orders G/L Integration form. Day End Processing will display an error message and stop processing if the account is not designated.

**To run Day End Processing from Purchase Orders**

1. Choose the Day End Processing icon from the Periodic Processing folder in Purchase Orders.

2. Click the Process button.
   A message appears informing you when day-end processing is complete.

3. Click the OK button or press Enter to close the information form.

For more information, select from the following:

*Before Running Day End Processing*
Tasks performed by Day End Processing
After running Day End Processing
Delete Inactive Records Form (stand-alone program)

If you use Purchase Orders as a stand-alone program (without Inventory Control), you can use the Delete Inactive Records form in the P/O Periodic Processing folder to remove obsolete item and account set records. The form removes records only if they currently have an inactive status and were set to inactive within the range of dates you specify.

Before you begin

- Print reports.
- Update records.
- Assign Inactive status to all records you want to delete.
- Assign to another account set item records that are currently assigned to the account set you want to delete.
- Run day-end processing if you have posted, since the last day-end processing, any transactions for items you will be deleting.

To delete inactive records

1. Choose the Delete Inactive Records icon from the Periodic Processing folder.
2. Select the types of inactive records to delete.
3. Enter the range of codes or numbers to delete for each record type you selected, or use the Finder to select the ranges.
4. Enter a range of dates to indicate when a record must have been made inactive to delete it. Purchase Orders selects records that have a status of Inactive and a corresponding "inactive" date within the range of dates you specify.
6. When you have finished deleting records, choose Close.

After using

Print new copies of the reports of the types of records you deleted to
update your files with current information. For information about printing reports, see Reporting Purchase Orders data.

Delivery Method for Vendors

Purchase Orders and Returns can be sent to the delivery addresses of Accounts Payable vendors or can be printed to the current print destination.

The delivery methods for vendors include:
  • Mail
  • E-Mail
  • Contact's E-Mail

Use the Processing tab on the Vendors form to specify the delivery method.

When you print a Purchase Order or a Return (when posting, you have the option to print), you can choose to print using the vendor's delivery method or to the current print destination. If you choose Vendor, the program uses the delivery method from the Vendor record.
Account Sets Report (stand-alone program) — Printing

If you use Purchase Orders without Inventory Control, you can print the Account Sets report from Purchase Orders to list descriptions and numbers of the general ledger accounts in your Purchase Orders account sets.

When to print
Print the report when you change information for the account set codes you have defined.

How to print
1. Choose Account Sets from the Setup Reports folder, or choose File, Print from the Account Sets form.
2. Select a range of account sets.
3. Choose Print.

For more information on the contents of this report, see Account Sets report — features.

Additional Cost Codes Report — Printing

Print the Additional Cost Codes report to list the information entered to define each of the additional cost codes used in your Purchase Orders system. (Additional costs are extra charges, such as for shipping and handling, that are entered separately from the costs of the items you purchase, then prorated to item costs, if you wish.)

When to print

Print the report when you change information for the additional cost codes you have defined.

How to print

1. Choose Additional Costs in the Setup Reports folder, or choose File, Print from the Additional Costs form.
2. Specify whether to list data first by additional cost code or vendor number.
3. Enter the range of additional cost codes and vendor numbers to list.
4. In multicurrency ledgers, enter the range of currencies to include.
5. Choose whether you want to print optional fields on the report.
6. Choose Print.

For more information on the contents of this report, see Additional Cost Codes report — features.

Printing the E-mail Messages Report

Print the E-mail Messages report to see a list of all the e-mail messages defined for purchase orders and returns.

**When to print**

Print the report when you add new e-mail messages or change information for existing e-mail messages.

**How to print**

Double-click the E-mail Messages icon in the Setup Reports folder, or choose File, Print from the E-mail Messages form, and then choose the Print button.
Information printed on the report

The report includes, for each e-mail message:

- The message type.
- The message ID and description.
- The subject.
- The body of the message.
- The last maintained date.
- The Inactive date, if applicable.

The G/L Integration report lists the G/L transaction and batch creation options and other information you entered in the G/L Integration form to specify how your Purchase Orders system sends transactions to General Ledger.

For more information on the contents of this report, see G/L Integration — Features.

**When to print**
Print the report before and after changing options.

**To print the G/L Integration report**

1. Double-click the G/L Integration icon in the Setup Reports folder, or choose File, Print from the G/L Integration form.

2. To begin printing, click the Print button.

   If you are printing to a printer, Purchase Orders displays the Print Destination dialog box to let you confirm your printer selection and change the number of copies to print. Click OK if the settings are correct; otherwise, click Cancel or Setup.

   If you are printing to a file, Purchase Orders displays the name of the file, so you can change it or cancel printing.

   If you are printing to the screen (preview), Purchase Orders displays the report. You can then export it to a file or send it to the printer.

Items Report (stand-alone program) — Printing

If you do not use Inventory Control, you can print the Items report from Purchase Orders to obtain a report of information entered for each item in the Items form.

When to print

Print the Items Report when you need a quick reference list of item information. You should also print a new copy for your files after adding, deleting, or changing item records.

How to print

1. Choose Items from the Setup Reports folder, or choose File, Print from the Items form.
2. Type the range of account sets for the report, or select a range using the Finder.
3. Specify the range of item numbers to include in the report.
4. Specify the type of items to include on the report. You can choose all items, only active items, or only inactive items.
5. For each item included in the report, print all or a combination of the information entered in the item record (Profile, Units Of Measure, Comments, Optional Fields, Vendors, Taxes).
6. Choose Print.

For more information on the contents of this report, see Items report — features.

The Vendor Contract Costs report lists the vendors from whom you purchase items and the costs of the items that each supplies.

**Note:** The report includes only the item costs that you have entered using the Vendor Contract Costs form.

**When to print**
Print the report to check the costs of inventory items from your standard vendors.

**How to print**
1. Choose Vendor Contract Costs from the Setup Reports folder, or choose File, Print from the Vendor Contract Costs form.
2. Choose the type of report that you want to print:
   - **Summary** — lists one line for each base vendor cost in P/O.
   - **Detail** — lists all of the information entered for each item contract cost in P/O.
   - **Vendor Contract Cost** — lists each unit cost for items and vendors, providing one line for each unique cost arising from unit, quantity, and sale discounts.
3. Specify the order in which to list vendor details. You can sort them by item number or vendor number.
4. Specify the range of items or vendors to include in the report.
5. If you have a multicurrency system, choose whether to print amounts in the vendor currency or in your functional currency.

   **Note:** The Vendor Contract Costs reports use the rate type from the vendor, along with the session date, to determine the exchange rate.
6. Choose Print.

Vendor Details Report (stand-alone program) — Printing

If you do not use Inventory Control, you can print the Vendor Details report from Purchase Orders.

The Vendor Details report lists vendors from whom you purchase items and the items each supplies. The report includes only the vendors you have assigned to item numbers on the Item Vendors tab of the Items form.

**When to print**

Print the report when you need to review the vendors from whom you buy items, or when you change the vendor information in item records.

**How to print**

1. Choose Vendor Details from the Setup Reports folder, or choose File, Print from the Vendor Details form.

2. Specify the order in which to list vendor details. You can sort them by vendor number or item number.

3. Specify the range of vendors to include in the report.

4. Choose Print.

Weight Units of Measure Report — Printing

The Weight Units of Measure report lists the information entered to define the weight units of measure for your inventory items (if you do not use the Inventory Control module).

For more information on the contents of this report, see Weight Units of Measure Report — Features.

When to print

Print the report when you add, change, or delete weight units of measure, or to provide people setting up items with a list of the weight UOMs that have already been added.

To print the Weight Units of Measure report

1. Double-click the Weight Units of Measure icon in the Setup Reports folder, or choose File, Print from the Weight Units of Measure form.

2. To begin printing, click the Print button.

   If you are printing to a printer, Purchase Orders displays the Print Destination dialog box to let you confirm your printer selection and change the number of copies to print. Click OK if the settings are correct; otherwise, click Cancel or Setup.

   If you are printing to a file, Purchase Orders displays the name of the file, so you can change it or cancel printing.

   If you are printing to the screen (preview), Purchase Orders displays the report. You can then export it to a file or send it to the printer.

Requisitions — Printing

You can print copies of requisitions until they are completed. Once they are completed, you can no longer print them and they will be deleted when you run Day End processing if you do not keep transaction history.

When to print

Print a requisition immediately after posting it in the Requisition Entry form, or use the Requisitions form when you want to print several requisitions together.

How to print

Choose Requisitions in the Forms folder, or print the requisition from the Requisition Entry Form immediately after posting. (Purchase Orders asks whether you want to print the requisition when it displays the "Posting completed" message.)

To print requisitions using the Requisitions form

1. Select the Requisitions icon from the Forms folder.
2. Select the report format you want to use to print requisitions.
   - Choose the Browse button to search for the report file to use. You can also select the default file that appears.
3. Choose the range of requisitions for which to print the forms.
4. Choose whether to print new copies of requisitions you printed before.
5. Choose Print.

You can also choose the Align button when printing to a printer. This button lets you print a sample copy of the requisition to check that preprinted forms are correctly inserted in the printer so that information will be printed in the right places.

Choose the following icon for information about using the Finder button:

[Find]

For more information on the contents of this report, see Requisitions — features.

Purchase Orders — Printing

You can print copies of purchase orders until they are completed. Once they are completed, you can no longer print them and they will be deleted when you run Day End processing if you do not keep transaction history.

E-mailing purchase orders. The Purchase Orders print program also lets you email purchase orders to vendors.

If you want to email purchase orders to vendors, you must:

1. Use the Email Messages form in the P/O Setup folder to create the email message that you want to send to vendors.
2. Set the Delivery Method to Email or to Contact's Email for each vendor that you want to email. You set the delivery method on the Processing tab of the vendor record in Accounts Payable.
3. Choose Vendor as the Delivery Method on the Print Purchase Orders form when you print purchase orders.
   - If you choose Vendor as the Delivery Method, the program will print to the destination specified in the Vendor record (that is, the current print destination, the vendor e-mail, or the contact e-mail).
   - If you choose Print Destination, the program will print all POs to the currently selected print destination.

When to print

Print each purchase order immediately after posting it in the Purchase Order Entry form, or use the Purchase Orders form to print several purchase orders together when you need copies to send to vendors or for other reasons.

How to print

Choose Purchase Orders in the Forms folder, or choose Yes from the posting message in the Purchase Order Entry Form immediately after posting.

To print purchase orders using the Purchase Orders form
1. Select the Purchase Orders icon from the Forms folder.

2. Select the report format you want to use to print purchase orders.
   Choose the Browse button to search for the report file to use. You can also select the default file that appears.
   If you are e-mailing purchase orders, choose Vendor as the Delivery Method, and specify the e-mail message that you want to use.

3. Choose the range of purchase orders to print.

4. Choose the types of purchase orders to print (Active, Future, Blanket, Standing).

5. Choose whether to print new copies of purchase orders you printed before and whether to include the details you printed before or only details added later.

6. Select the Custom Form option only if you know that you are using a customized return form that requires it. (This option is for custom forms that do not use the report selection criteria sent by this print window.)

7. Choose Print.
   You can also choose the Align button when printing to a printer. This button lets you print a sample copy of the purchase order to check that preprinted forms are correctly inserted in the printer so that the purchase order information will be printed in the right places.

Choose the following icon for information about using the Finder button:

For more information on the contents of this report, see Purchase orders — features and Creating formats for printed forms.

  Choosing Printer as the print destination
  Choosing Screen as the print destination
You can print copies of receiving slips until they are completed. Once they are completed, you can no longer print them and they will be deleted when you run Day End processing if you do not keep transaction history.

**Note:** Forms PORCP03.RPT and PORCP04.RPT will print cost information. If you want to hide costs on these forms, you will need to customize them.

**When to print**

Print a single receiving slip immediately after posting it in the Receipt Entry form, or use the Receiving Slips form to print a range of receiving slips when you want to print several slips together.

**How to print**

You can use the Receiving Slips icon to print a range of receiving slips, or you can print a receiving slip from the Receipt Entry Form immediately after posting. (Purchase Orders asks whether you want to print the receiving slip when it displays the "Posting completed" message.)

**To print receiving slips using the Receiving Slips form**

1. To print a range of receiving slips using your browser, click the Purchase Orders Receiving Slips button in the panel on the left of the browser, or click the icon that appears on the right-hand side.

   To print a range of receiving slips from your Sage Accpac desktop, choose the version 5.0 Receiving Slips icon from the P/O Forms folder.

2. Select the report format you want to use to print receiving slips.

   Choose the Browse button to search for the report file to use. You can also select the default file that appears.

3. Choose the range of receipts for which to print receiving slips.

4. Choose whether to print new copies of receiving slips you printed before.

5. Choose whether to include serial and lot numbers on the receiving...
slip.

6. Choose Print.

You can also choose the Align button when printing to a printer. This button lets you print a sample copy of the receiving slip to check that preprinted forms are correctly inserted in the printer so that the receipt information will be printed in the right places.

Choose the following icons for information about using the Finder:

Finder

**Returns — Printing**

You can print copies of returns until they are completed. Once they are complete, you can no longer print them and they will be deleted when you run Day End processing if you do not keep transaction history.

**E-mailing purchase returns.** The print program also lets you email purchase returns to vendors.

If you want to email returns to vendors, you must:

1. Use the Email Messages form in the P/O Setup folder to create the email message that you want to send to vendors.

2. Set the Delivery Method to Email or to Contact's Email for each vendor that you want to email. You set the delivery method on the Processing tab of the vendor record in Accounts Payable.

3. When you print returns, choose Vendor as the Delivery Method on the Print Purchase Orders form.
   - If you choose Vendor as the Delivery Method, the program will print to the destination specified in the Vendor record (that is, the current print destination, the vendor e-mail, or the contact e-mail).
   - If you choose Print Destination, the program will print all returns to the currently selected print destination.

**When to print**

Print each return immediately after posting it in the Return Entry form, or use the Returns form when you want to print several returns together.

**How to print**

Choose Returns in the Forms folder, or print the return from the Return Entry Form immediately after posting. (Purchase Orders asks whether you want to print the return when it displays the "Posting completed" message.)

**To print returns using the Returns form:**

1. Select Forms > Returns.
2. Select the report format you want to use to print returns.
   Click the Browse button to search for the report file to use. You can also select the default file that appears.
   If you are e-mailing returns, choose Vendor as the Delivery Method, and specify the e-mail message that you want to use.

3. Choose the range of returns for which to print the forms.

4. Choose whether to print new copies of returns you printed before.

5. Choose whether to print serial and/or lot numbers on the return slip.

6. Specify whether to print the number of labels on the Return Totals tab for each return (select the Require Mailing Labels option) or only one label per return (do not select the option).

7. Select the Custom Form option only if you know that you are using a customized return form that requires it. (This option is for custom forms that do not use the report selection criteria sent by this print window.)

8. Click Print.

Choose the following icon for information about using the Finder button:

Mailing Labels — Printing

Print mailing labels to attach to envelopes in which you are mailing documents to vendors and to packages in which you are returning items to vendors.

When to print
Print labels when sending purchase orders to vendors or returning goods.

How to print
1. Choose the Mailing Labels icon from the Forms folder.
2. Select the report format you want to use to print labels.
   The program displays the name of the last report file used by default. Click the Browse button to select a different report file.
3. Choose whether to print labels for purchase orders or returns, then specify the range of document numbers.
4. Choose whether to print labels you printed before and whether to print labels for returns for which you selected the Require Mailing Labels option when you printed return forms.
5. Click the Print button.

When printing to a printer, you can click the Align button to print sample labels and check that the labels print properly on preprinted forms. (If the mailing information does not appear in the right places, ensure that the forms are correctly inserted in the printer.)

Choose from the following icons for information about the buttons in the Purchase Statistics form:

Choosing Screen as the print destination
Print the Aged Purchase Orders report to list all incomplete purchase orders and their relative ages in the system.

You can list all or a range of purchase orders by purchase order number, vendor number, or currency (in multicurrency systems). You specify the number of days in each of three aging periods. There is also a current period and a fifth period which includes purchase orders that have been outstanding for more than the number of days in the last period you specified. (You set default report periods in the Options form.)

In multicurrency systems, you can list purchase orders on the report by their currencies and you can print amounts in either the functional currency or the vendors' currencies.

**When to print**

Print the report periodically to identify purchase orders which have not been completed.

**How to print**

Choose the Aged Purchase Orders icon in the Analytical Reports folder, then specify the following information:

- The date as of which you want purchase orders aged.
  
  All purchase orders older than the Aged As Of date fall into one of the aging periods. Purchase orders which are more recent than the Aged As Of date (and up to the Cutoff Date) appear in the Current column.

- The Cutoff Date (the date of the most recent purchase order you want listed). The report does not list orders with a document date later than this date. If you do not want to list any current purchase orders, enter the same date in the Aged As Of and Cutoff Date fields.

- The sorting order for the report: by purchase order number, vendor number, or currency code.

- Ranges of purchase order numbers and vendor numbers to include on the report.

- In multicurrency ledgers, the range of currency codes to use to select the
transactions for the report (only the transactions entered in the selected currencies are printed).

- Number of days in each report aging period. The default aging periods are defined in the Options form.
- Whether to print amounts in the vendor currency or in the functional currency (multicurrency ledgers).
- Extra information to include: contact name and phone number, and space for comments.

Click these icons for information about the buttons in the Aged Purchase Orders form:

For more information on the contents of this report, see Aged Purchase Orders report — features.

G/L Transactions Report — Printing

Print the G/L Transactions report to obtain a list of the general ledger journal entries created from all transactions posted in Purchase Orders since the last time you created the general ledger batch.

To print this report, you must select On Request Using G/L Batch Icon for the Create G/L Transactions option in the Options form. If you create transactions during posting or during day-end processing, you cannot print the G/L Transactions report.

You can print detailed or summary versions of the report.

In multicurrency systems, you can print amounts either in the functional currency or in the source (vendor) currencies in which you posted the transactions in Purchase Orders.

When to print

Print the report before you use the Create Batch form to produce general ledger transactions. When you create the general ledger batch, the program erases the data for the G/L Transactions report.

Remember to run Day End Processing before you create the general ledger batch if you want to include the latest costing information in the report.

How to print

Choose the G/L Transactions icon in the Analytical Reports folder, then specify the following information:

- The posting sequence for which to list transactions.
- Whether to print a detail or summary report. On detail reports, you also select whether to list transactions by account number or year and period.
- Whether to print amounts in functional or source (vendor) currency (multicurrency ledgers).

Click this icon for information about the button in the G/L Transactions form:
For more information on the contents of this report, see G/L Transactions report — features.

If you do not use Sage ERP Accpac Inventory Control, you can print the Item Transaction History report from Purchase Orders.

The Item Transaction History report lists all transactions posted for the items assigned to the account sets and period that you select for the report. The report also shows the net change to the Inventory/Expense account for the account set and period.

Item transaction history is accumulated and reported according to the fiscal year you defined in Common Services. Transactions are accumulated for this report only if you use the Keep Transaction History option in the Options form.

Transactions cleared by the Clear History form will not be included in the report.

When to print
Print the report when you want to review transaction history by item, or list transactions from all posting journals.

How to print
1. Choose Item Transaction History from the Analytical Reports folder.
2. Select the ending period for the range of transactions you want to print. Purchase Orders lists all transactions occurring before and during the specified period, excluding those you cleared using the Clear History form.
3. Specify the method of sorting transactions. Choose either Account Set Code or Item Number in the By field.
4. Select a range of account sets to include in the report.
5. If you chose to sort by item number, select a range of item numbers to include in the report.
6. Choose Print.

For more information on the contents of this report, see Item Transaction History.

The Payables Clearing Audit list reports the debit and credit entries to the Payables Clearing account for receipts, invoices, returns, credit notes, and debit notes. Use the list to reconcile the Payables Clearing account.

**When to print**

When you want to reconcile your Payables Clearing account. The report is updated during Day End Processing and, if you keep history, lists transactions that occurred during and since the last year and fiscal period for which you keep history.

**How to print**

1. Choose Payables Clearing Audit from the Analytical Reports folder.
2. Choose the account sets for which to include transactions on the report.
3. Choose the fiscal years and periods for the report.
4. If you have a multicurrency ledger, choose whether to print amounts in source currency or in source and functional currency.
5. Click Print.

Posting Journals — Printing

Print the posting journals at the end of each day, as part of your day-end procedure and audit trail documentation.

When to print
Print posting journals regularly (daily or weekly) after running Day End processing.

How to print
1. Select Analytical Reports > Posting Journals.
2. Select the type of transaction for which to print a posting journal (Receipt, Return, Invoice, Credit/Debit Note).
3. Select the method by which to group transactions on the journal:
   - **Day End Number** — lists transactions by the Day End Processing run when they were posted, beginning with transactions posted during the earliest selected day-end.
   - **Transaction Date** — lists transactions in order of their transaction date (such as the receipt date for receipt transactions). The transaction with the earliest date is listed first.
   - **Vendor Number** — lists transactions by vendor number so that you can easily see all transactions posted for each vendor.
   - **(Transaction) Number** — lists transactions by their document numbers (Receipt Number, Return Number, Invoice Number, Credit/Debit Note Number), beginning with the lowest number.
4. Specify the range of day-end numbers for which you are printing the report.
5. Specify whether to include additional costs on receipt journals.
6. Specify whether to add a summary of taxes.
7. If you are printing Invoices or Credit/Debit Notes, you can select Accounts Payable audit information to help you match postings in Purchase Orders to Accounts Payable transactions.
8. If you have Project and Job Costing, select Include Job Details to print
job-related information.

9. Select Optional Fields to include optional field information on posting journals (if you use Optional Fields).

10. Choose whether you want to reprint journals you have printed before.

11. Choose to include serial and or lot numbers for applicable items on the report.

12. Choose the size of the paper in your printer (either legal size, or letter/A4).

13. Click Print.

For more information on the contents of this report, see Posting journals — features.

Purchase History Report — Printing

Print this report to obtain summary or detailed purchase information by vendor or inventory item. Since Summary reports provide less information than Detail reports, some fields will be hidden if you select Summary in the Report Type list. For instance, summary reports retrieve purchase orders from a range using specific years and periods, while detail reports can also select by Document Date and filter by Item Number.

When to print

After running Day End Processing, at the end of an accounting cycle, or any time you want to check your purchasing history.

How to print

Select Analytical Reports > Purchase History to display the Purchase History Report form. Or open the Purchase History form and select File > Print from the menu bar.

1. Select either Detail or Summary from the Report Type list.

2. If you selected a Detail report, you choose to select purchase orders from Document date or Year/Period, and include Serial/Lot numbers for applicable items on the report. For Summary reports, purchase orders can only be selected by Year/Period and the Include Serial/Lot Numbers checkbox is not available for selection.

3. Specify the report range (either by Year/Period or by Document Date).

4. Use the Sort By list to select how the purchase history information is reported (either by vendor number or item number).

5. Choose the vendors and/or items to include on the report. A Detail report allows you to select ranges for both Vendor and Item Numbers, while Summary report only gives you one of the two options.

6. If you are printing a Detail report and selected the Include Serial/Lot Numbers checkbox, enter ranges for both the serial and lot numbers you want to appear on the report.

7. If you use multicurrency accounting, choose the range of currency
codes for which to print transactions (only transactions posted with the selected currency codes are listed), and specify whether to print amounts in the vendor's currency or functional currency.

8. If you selected a Detail report and use the Accpac Project and Job Costing application, select the Include Job Details checkbox to print job information for all job-related transactions.

9. Choose Print.

Click these icons for information about the buttons in the Purchase History (report) form:

For more information on the contents of this report, see Purchase History report — features.

Purchase Order Action Report — Printing

Print the Purchase Order Action report to obtain a summary or detail list of your current purchase orders. Detail reports can be sorted by purchase order number, vendor number, or item number. Summary reports can not be sorted by Item Number, nor can they be filtered by Item Status.

When to print

When you need to review purchase orders to see what has been or needs to be done.

How to print

Choose Purchase Order Action from the Analytical Reports folder, then specify the following information:

- Choose to print in detail or summary. If you selected Detail as the report type, you can sort by purchase order number, vendor number, or item number. Summary reports can only be sorted by purchase order number or vendor number. Choose the start and end range of numbers for the selection you made in the Sort By field.

- Specify the start and end range for the secondary sort option, which is automatically determined for you and displayed in the Then By field. If you are printing a Detail report, select the range for the third sort option.

- Make a selection from the Select By list to report by either Expected Arrival Date or Purchase Order Date. Then enter a start and end date range for selection made.

- Select a Purchase Order source, then the Purchase Order type. You can choose all purchase orders, those that have yet to be received, partially received or are on hold.

- Use the Print Status list to specify whether to print all purchase orders in the range, or only those that are posted or printed.

- Use the Item Status list to specify whether to select purchase orders with all items defined in the range, or only items that are or partly completed, completed or incomplete.
In multicurrency ledgers, choose whether to print amounts in the functional or vendor currency.

If you are printing a Detail report and have the Accpac Project and Job Costing application installed, select the Job Details checkbox to include job-related information with purchase orders.

Select Optional Fields to include optional field information with purchase orders (if you use Optional Fields).

Click these icons for information about the buttons in the Purchase Order Action (report) form:

Purchase Statistics Report — Printing

Print the report to obtain a list of the statistics accumulated from Purchase Orders transactions since you last cleared the purchase statistics data for the period you specify. Statistics are reported for the type of year (fiscal or calendar) and period you specified for the Accumulate Statistics option in the Options form.

When to print

When you want to check on the volume of purchase orders, receipts, invoices, credit notes, and debit notes you processed during a period. You can print the report after running Day End processing, only if you use the Accumulate Statistics option.

How to print

Choose the Purchase Statistics icon in the Analytical Reports folder, or choose File, Print from the Purchase Statistics form, then:

1. Specify the range of years and periods for which to print the report.

2. If you use multicurrency accounting, specify whether to print amounts in vendor currency or functional currency, choose the range of currency codes (to list only the purchase orders entered in the selected currencies), and select whether to consolidate statistics for the range of currencies you specify.

3. Choose Print.

Shippable Backorders Report — Printing

The Shippable Backorders report lists the sales orders that you may be able to fill as a result of receipts you have posted in Purchase Orders. The report contains meaningful data only if you enter sales order numbers with detail lines on receipts. If you use Sage ERP Accpac Order Entry with Purchase Orders, you can select order numbers from Order Entry and include them on the report.

When to print

Print the report after posting receipts to find out which sales orders you may now be able to fill.

How to print

1. Choose Shippable Backorders in the Analytical Reports folder.
2. Specify the ranges of sales order numbers and item numbers for which to print the report.
3. Specify the range of receipt dates from which to select data for the report.
4. Choose Print.

Choose the following icon for information about using the Finder button:

For more information on the contents of this report, see Shippable Backorders report — features.

Transaction List — Printing

Use the Transaction Lists to print detailed or summary listings of all current Purchase Orders transactions. You can sort transaction reports by transaction number or vendor number, and you can specify a range of transaction numbers, vendor numbers, and currency codes (if you have a multicurrency system) by which to select the transactions to report.

When to print

Print these reports for information about current transactions and, if you keep transaction history, about past transactions you have not yet cleared.

Keep Transaction History option. If you do not keep transaction history, Purchase Orders deletes transaction information when you run Day End processing. If you keep transaction history, you choose when to delete the data for the reports using the Clear History form.

How to print

Choose the Transaction List icon in the Analytical Reports folder, then:

1. Select the type of transaction you want to print (requisitions, purchase orders, receipts, returns, invoices, credit notes, or debit notes).
2. Select the type of report (detail or summary).
3. Select the sort order (by transaction number or vendor number).
4. Select the range of transaction numbers, vendor numbers, and currencies (if you have a multicurrency system).
5. Select the additional information you want to include in the report such as the entries from the "Information" tab for the transaction type, transaction details, addresses, requisition numbers (for purchase orders) and additional costs (for receipts). You can also choose job details (for job-related transactions), optional field information (if you use Optional Fields) and serial/lot numbers (if working with transactions involving serialized/lotted items).
6. When printing the Purchase Order List, choose the types of purchase orders to list (active, standing, future, blanket).
7. When printing the Purchase Order or Requisition List, choose the statuses to include (Entered, Purchase Order Printed, Never Received, Partially Received, Completed, On Hold).

8. Click the Print button.

Choose from the following icons for information about the buttons in the Transaction List form:

Finder

Sage ERP Accpac Training

Become a Sage ERP Accpac expert with online or classroom training through Sage University.

If you want to get beyond the basics and tap into the full power of your Sage ERP Accpac system, nothing beats targeted training and education.

Our training resources include a nationwide network of authorized classroom training centers, online courses, partners who can conduct on-site training, manuals and guides for your self-study, and an annual customer conference.

For more information on Sage ERP Accpac training, choose one of the following links:

Find a Course

Search training courses on the Sage University Web site by product, type, location, track, schedule—or try our advanced search.

Anytime Interactive

Anytime Interactive training offers a full range of recorded instructor-led sessions that are easy to use, always accessible, and ready when you are. All you need is a computer, speakers and a high-speed Internet connection.

Anytime Interactive sessions are ideal for review material, acquainting new-hires with basic processing skills, and cross-training staff. Interactive sessions include product specific instruction and online review quizzes.

Classroom

Instructor-led classroom training provides you with personal interaction in a professional atmosphere you will enjoy. Classroom training also allows you the opportunity to become Sage certified.

Classroom training is ideal if you prefer one-on-one assistance, interaction with other students and a classroom atmosphere.

Lunch & Learn

Lunch & Learns are one-hour Realtime (Online) sessions that cover a
particular topic or process. Each Lunch & Learn is designed to increase productivity by simply providing you with a stronger understanding of a specific feature or functionality within the software.

Choose one of our 40+ information packed Lunch & Learn sessions and become more proficient in just one hour.

**Realtime**

Realtime training sessions are online, instructor led and scheduled for a specific date and time. All you need is a computer, phone, and an Internet connection. Everything happens live, so you can ask questions and interact with other participants and the instructor.

Realtime combines the interaction of a classroom with the convenience of staying right where you are.

Realtime sessions include live product specific instruction, electronic or printed course materials, hands-on exercises, and online review quizzes.
Create a New Purchase Requisition

To create a new requisition:

1. Open Purchase Orders > P/O Transactions > Requisition Entry.

   [Click here for help on Requisition Entry fields.]

2. Press the Tab key to accept *** NEW *** as the number in the Requisition Number field.

   Purchase Orders will assign a requisition number when you post the requisition.

   If you do not want Purchase Orders to assign the number automatically, you can type the new number yourself, and then press the Tab key.

3. Type the Vendor number or select it from the Finder.

   - You can skip the vendor number and enter a vendor name—such as for a new vendor—or you can skip the vendor fields entirely.

   - You can also click the New button to add a new vendor record in Accounts Payable.

4. Enter a requisition date, a date required, and an expiration date.

   If it has not been completed, this requisition will be deleted when you run Day End Processing on the expiration date.

5. Choose whether this requisition is on hold.

   **Note:** You cannot create purchase orders from on-hold requisitions.

   [If you are approving a requisition that was previously entered:]

6. Choose the Job Related option if you use the Project and Job Costing module and this requisition is for a job.

   If the purchase requisition is job-related, all items must be for particular contracts, projects and categories in Project and Job Costing.

   Also, you cannot add serialized items or items assigned to lots to job-
related transactions. Instead, you must order them as non-job-related items, receive them into inventory, and then use the Material Usage form in Project and Job Costing to move them from inventory to jobs.

7. Type the name of the person requesting the order. If you use Sage ERP Accpac Payroll, you can choose the requester from the Finder.

8. Enter or type the location where you want the goods delivered, and enter a requisition description and reference.

9. Tab into the detail entry grid (or click the grid) to start entering requisition details. You may have to press the Insert key to start a new line.

10. If this is a job-related requisition, double-click the Contract field and enter the contract number, or click the Contract column heading to look up contract numbers.

    You must also enter or choose the project and category to which you are allocating items.

11. Double-click the Item Number field and enter an item number.

    You can also click the Item Number column heading to look up item numbers. (Using the Finder.)

    **Note:** You can leave the vendor fields blank, and you can specify different vendors on each line. You can create more than one PO from a single requisition.

12. Use the tab key to move through the columns on the form. Or, you can click the Item/Tax... button or press F9 to display an entry form for adding items.

    - Some columns may not be displayed. Purchase Orders lets you hide columns and change the column order.
    - The Location for each line defaults from the Location field in the header fields.
    - You must enter a Quantity Ordered.
    - For information on other detail fields, see Requisition Entry fields.

13. To add optional field information for the requisition, click the Optional Fields tab.
14. To change currency exchange rates in a multicurrency system, click the Detail button at the bottom to use the Detail Items popup form.

15. To check the totals for the requisition, click the Totals tab.

16. Click Post to post the purchase requisition.

   Purchase Order Entry lets you print the purchase requisition after posting.

   You can also print the purchase requisition separately, from the P/O Forms folder.

**Note:** If you do not have the security right to approve requisitions, the requisition will be on hold after you post it, and the Approval Status field will display "Entered."

[Related topics](#)
Approve a Purchase Requisition

Note the following points concerning requisition approval:

- You must have requisition approval security rights assigned to you in Sage ERP Accpac.
- You must log on using the Sage ERP Accpac User ID that is assigned approval rights.
- You must remove the On Hold status from the requisition, and then post it.

To approve a requisition:

1. Open Purchase Orders > P/O Transactions > Requisition Entry.
   Click here for help on Requisition Entry fields.

2. Use the Finder (⌘) or the navigation keys (← → ↑ ↓) to look up the requisition that you want to approve.

   To check the requisition details and totals:
   a. Click in the detail grid and use the scroll bars to review requisition details. You can expand the size of the Requisition Entry form to view more information.

      Note: Some columns may not be displayed. Purchase Orders lets you hide columns and change the column order.

      You can also click the Detail button to easily review all the fields for a single detail.

   b. Click the Totals tab to see the requisition comment and item totals.

   c. Click the Optional Fields tab to see additional information for this requisition.

3. Uncheck the On Hold checkbox on the first tab to approve the requisition.

   You cannot create purchase orders from on-hold requisitions.

4. Click Post to post the purchase requisition.
Purchase Order Entry lets you print the purchase requisition after posting.

You can also print the purchase requisition separately, from the P/O Forms folder.

**Note:**

- If you have approval rights, the Approval Status field will say "Approved," and the description for your User ID will appear in the Approver Name field.
- If you do not have the security right to approve requisitions, the requisition will still be on hold after you post it, and the Approval Status field will display "Entered."

Create a New Purchase Order

- Overview
- Before entering purchase orders

To create a new purchase order:

1. Open Purchase Orders > P/O Transactions > Purchase Order Entry.
   (Click here for help on Purchase Order Entry fields.)

2. Press the Tab key to accept *** NEW *** as the purchase order number (in the PO Number field).
   Purchase Orders will assign a purchase order number when you post the PO.

   If you do not want Purchase Orders to assign the number automatically, you can type the new number yourself, and then press the Tab key.

3. Type the Vendor number or select it from the Finder.
   You can also click:
   - The New button to add a new vendor record in Accounts Payable.
   - The Zoom button to check address and contact information.

   To change the tax code, click the Taxes tab, and then return to the Order tab.

4. Choose a template if your company uses templates to fill in default field entries.

5. Click the Zoom button (▲) to choose one or more requisitions from which you are issuing the purchase order.

   Skip this field if you are creating a purchase order without referencing a requisition.
   (If you are choosing a requisition: □)

6. Choose the Job Related option if you use the Project and Job Costing module and this PO is a job related PO.

   If the purchase order is job-related, all items must be for particular contracts, projects and categories in Project and Job Costing. Posting
the purchase order updates committed quantities and amounts for the jobs.

Also, you cannot add serialized items or items assigned to lots to job-related purchase orders. Instead, you must order them on a non-job-related PO, receive them into inventory, and then use the Material Usage form in Project and Job Costing to move them from inventory to jobs.

7. Fill in the remaining fields at the top of the Purchase Order Entry form. If you want to change the vendor account set, you can only choose from account sets that use the vendor's currency.

8. Tab into the detail entry grid (or click the grid) to start entering purchase order details. You may have to press the Insert key to start a new line.

9. If this is a job-related PO, double-click the Contract field and enter the contract number, or click the Contract column heading to look up contract numbers.

   You must also enter or choose the project and category to which you are allocating items.

10. Double-click the Item Number field and enter an item number.

    You can also click the Item Number column heading to look up item numbers. (Using the Finder.)

11. Use the tab key to move through the columns on the form. Or, you can click the Item/Tax... button or press F9 to display an entry form for adding items.

    - Some columns may not be displayed. Purchase Orders lets you hide columns and change the column order.
    - The Location defaults from the Ship To Location field in the PO header fields.
    - You must enter a Quantity Ordered.
    - For information on other detail fields, see Purchase Order Entry fields.

12. To add optional field information for the order, click the Optional Fields tab.
13. To change currency exchange rates in a multicurrency system, click the Rates tab.

14. To check the totals for the order, click the Totals tab.

15. Click Post to post the purchase order.

   Purchase Order Entry lets you print the purchase order after posting.
   You can also print the purchase order separately, from the P/O Forms folder.
Copy Purchase Orders

Overview

To create a new purchase order from one or more existing POs:

2. In the From Vendor Number field, type the code for the vendor whose purchase order details you want to copy for the new PO.

3. In the To Vendor Number field, type the code for the vendor for whom you are creating the new purchase order, or use the Finder or the navigation buttons to select it.

4. In the From PO Number and To PO Number fields, enter the range of existing From Vendor orders to use as the basis for the new purchase order.

5. The tax group defaults to the tax group of the To Vendor, but you can change it.

6. Choose the type of PO that you want to copy (Active, Standing, Future, or Blanket).

7. Choose whether you are copying job-related purchase orders.

8. Select the Use PO Cost checkbox if you want to copy costs from the original POs to the new PO that you are creating. (This choice is only available if the From and To vendors use the same currency.)

9. Click the Go button (►) to add the details from the existing purchase orders to the new order.

10. In the PO Number field, type a purchase order number if you wish to assign a number manually, or accept the ***New*** entry to let the program assign the next number in the purchase order number sequence.

11. In the PO Date field, enter or choose the date for the purchase order. The program automatically displays the session date as the PO date.

12. If you need to put the purchase order on hold for some reason, select...
the On Hold option.

13. Enter a description and a reference for the PO.

14. Use the detail grid on the Copy Purchase Orders form to edit the details as you require.
   
   To delete a detail line, you simply click the detail line, and then press the Delete key on your keyboard.

15. When you have finished editing information for the purchase order, click the Create button to generate the PO.

You can then view, edit, and post the order using the Purchase Order Entry form.

Enter Receipts

Overview

To receive goods:

1. Open Purchase Orders > P/O Transactions > Receipt Entry.
   
   Click here for help on Receipt Entry fields.

2. Press the Tab key to accept *** NEW *** as the receipt number (in the Receipt Number field).

   Purchase Orders will assign a receipt number when you post the PO.

   If you do not want Purchase Orders to assign the number automatically, you can type the new number yourself, and then press the Tab key.

3. Type the Vendor number or select it from the Finder.

   Or, you can skip the Vendor Number field and directly enter or select the PO number. (You must enter the Vendor number first if you are receiving goods from several POs.)

   You can also click:

   - The New button to add a new vendor record in Accounts Payable.
   - The Zoom button to check address and contact information.

   WARNING! Although you can add a receipt before you add the vendor record in Accounts Payable, you should not use this option in a multicurrency system.

4. If you are receiving goods without a purchase order, you can change the tax code, if necessary, before continuing.

   Click the Taxes tab, make your tax changes, and then return to the Receipt tab.

5. **If you are receiving goods from one purchase order**, in the PO Number field, enter or select the purchase order number.

   **If you are receiving goods from several POs**, click the Zoom button (▲) beside the From Multiple POs field to choose one or more purchase orders from which you are issuing the purchase order.
To select several purchase orders:

**If you are receiving goods without a purchase order number,** tab through the PO Number field to fill in other receipt fields.

**Note:** You must specify a vendor before you can complete the receipt fields.

6. If you did not specify a purchase order, and you use the Project and Job Costing module, you can choose the Job Related option if this receipt is job-related.

   If the purchase order that you selected is job-related, the job-related checkbox will be automatically selected. You cannot mix job-related and non-job-related POs on a receipt.

7. Fill in the remaining fields at the top of the Receipt Entry form.
   - The posting date is the date for transactions being posted to the General Ledger, so it also determines the contents of the Fiscal Year and Period fields. The date applies also to the invoice.
   - If you use Inventory Control, select a location code to which bills for the receipt will be sent. You can also use the Zoom button (▲) to edit the address.
   - If you want to change the vendor account set, you can only choose from account sets that use the vendor's currency.

8. Tab into the detail entry grid (or click the grid) to start entering receipt details.

   **To receive all goods on purchase orders,** click the Receive All button.

   **To partially receive goods on purchase order:**
   - Enter the quantity received for each item in the detail section.
   - You can also change other information, including item descriptions, item costs (if you have appropriate security authorizations), discount amounts, item weights, quantity canceled and outstanding, number of item labels required, arrival date, comments, and optional fields.
   - If you want, you can delete lines that are not being received (but it
isn't necessary if the amount received is "0").

**Note:** You cannot add detail lines if you are receiving specific purchase orders.

9. Use the tab key to move through the columns on the form. Or, you can click the Item/Tax... button or press F9 to display a form for editing receipt details.

- Some columns may not be displayed. Purchase Orders lets you hide columns and change the column order.
- You must enter a Quantity Received for all goods you receive unless you use the Receive All button.
- For information on other detail fields, see [P/O Receipt Entry fields](#).

10. To add optional field information for the receipt, click the Optional Fields tab.

11. To change currency exchange rates in a multicurrency system, click the Rates tab.

12. To check the totals for the receipt, click the Totals tab.

13. Click Post to post the receipt.

    Purchase Order Entry lets you print the receipt after posting.
    You can also print the receipt separately, from the P/O Forms folder.
Enter Additional Costs on Receipts

**Overview**

**To enter additional costs:**

1. Open Purchase Orders > P/O Transactions > Receipt Entry.
   
   Click here for help on Receipt Entry fields.

2. On the Receipt tab, enter vendor and purchase order information, along with receipt quantities.

3. Choose the Additional Cost tab to add charges to the shipment from both primary vendors and secondary vendors.

4. On the Additional Costs tab, use the Finder or the navigation buttons to select an existing additional cost vendor for which to enter or edit an additional cost detail, or click the New button to add a new additional cost vendor.

   A new receipt will list the primary vendor only. To add a secondary vendor,

   a. Click the new button beside the Additional Cost Vendors field.

   b. Click the Finder beside the Vendor Number field.

   c. Select the new additional cost vendor. You can also use the New button to add a vendor to the Accounts Payable module.

5. When you have selected the correct vendor in the vendor number field:

   - Click in the additional cost detail entry grid and enter or edit the additional cost details.

     Either click the Cost/Tax button or press the F9 key to display all the information for a selected detail on a separate form and to edit tax classes or the tax included fields for the detail, . Type the customer number or select it from the Finder.
Choose to prorate each additional cost by quantity, cost, or weight.

_If you are adding additional costs for non-inventory items, you must choose No Proration. If you choose to prorate by quantity, cost, or weight, the program will display an error message and prevent you from posting the receipt._

For more information on prorating additional costs, see [Calculating prorated additional costs](#).

- Click the Vendor Taxes button to change tax information for the vendor.

- To delete a detail, select it, and then click Delete. If a message appears asking you to confirm the deletion, click Yes.

6. Click the Post button to post the receipt.
Enter Invoices

To invoice received goods automatically on the Receipt Entry form:

To invoice one or more receipts using the Invoice Entry form:

1. Open Purchase Orders > P/O Transactions > Invoice Entry. Click here for help on Invoice Entry fields.

2. Type the number of the invoice that you received from the vendor.

3. Type the vendor number or select it from the Finder.

   If you are invoicing a single receipt for the primary vendor, you can skip the Vendor Number field and enter or select the receipt number in the Receipt Number field.

   If the invoice is for several receipts, you must enter the vendor number and then click the Zoom button (▲) beside the From Multiple Receipts field.

   If you are invoicing additional costs for a secondary vendor, you must enter the secondary vendor number in the Vendor Number field and then enter or select the receipt number Receipt Number field.

4. If you are invoicing only one shipment, type the number of the receipt, or select the number using the Finder.

   If you are invoicing several receipts, select the From Multiple Receipts option, then click the zoom (▲) button beside the option. On the Create Invoice From Receipts form that appears select the receipt numbers using the Finder, then click the Invoice button.

   The program will display all of the information from the receipts that you selected, allowing you to edit the existing information or post the default invoice.

   **Note:** If you are invoicing a secondary vendor, the Finder will display only the primary vendor number and name for the receipt. When you choose the receipt the invoice amount will appear on the Additional Costs tab — not in the detail section of the Invoice tab.

5. Check the header information for the invoice to make sure that it is correct.
6. You can edit invoice details right on the detail entry grid, or on the Items/Taxes form.

7. Click the Additional Costs tab to edit invoice details for a secondary vendor (and for primary vendor additional costs).

8. Click the Taxes tab to check the tax totals. You can change the tax class and tax amount for each jurisdiction, if necessary.

9. Click the Totals tab to check the totals for the invoice.

10. Click Post to post the invoice.

    When posting is finished, the program will let you print the invoice.

Enter Additional Costs on Invoices

Overview

To enter additional costs:

1. Open Purchase Orders > P/O Transactions > Invoice Entry.
   
   [Click here for help on Invoice Entry fields.]

2. On the Invoice tab, enter or edit vendor and receipt information, along with invoice quantities.

3. Choose the Additional Cost tab to add charges to the invoice.

4. On the Additional Costs tab:
   
   - Click in the additional cost detail entry grid and enter or edit the additional cost details.
   
     Either click the Cost/Tax button or press the F9 key to display all the information for a selected detail on a separate form and to edit tax classes or the tax included fields for the detail, . Type the customer number or select it from the Finder.

   - Choose to prorate each additional cost by quantity, cost, or weight.

To prorate additional costs for a single receipt:

i. Select the additional cost on the Additional Cost entry grid.

ii. Press F9 to open the Detail Costs/Taxes form.

iii. Click the Zoom button beside the Distribute Proration field.

iv. Distribute the additional cost (and billing rate for billable details).

To prorate additional costs for several receipts:

i. Select the additional cost on the Additional Cost entry grid.

ii. Press F9 to open the Detail Costs/Taxes form.

iii. Click the Dist. Cost button to display the Cost Allocation form. (The Zoom button beside the Distribute Proration field will be dimmed.)

iv. Highlight the receipt you want, and click the Zoom button in the
v. Distribute the additional cost (and billing rate for billable details).

If you are adding additional costs for non-inventory items, you must choose No Proration. If you choose to prorate by quantity, cost, or weight, the program will display an error message and prevent you from posting the receipt.

For more information on prorating additional costs, see Calculating prorated additional costs.

- To delete a detail, select it, and then click Delete. If a message appears asking you to confirm the deletion, click Yes.

5. Check the Invoice total on the Totals tab.
6. Click the Post button to post the invoice.

Enter Returns

To return items using the Return Entry form:

1. Open Purchase Orders > P/O Transactions > Return Entry.

   Click here for help on Return Entry fields.

2. Press the Tab key to accept *** NEW *** as the return number (in the Return Number field).

   Purchase Orders will assign a return number when you post the return.

   If you do not want Purchase Orders to assign the number automatically, you can type the new number yourself, and then press the Tab key.

3. Type the vendor number or select it from the Finder.

   You can also skip the Vendor Number field and go directly to the Return Number field. However, entering the vendor first will limit the length the receipt list.

4. Type or select the receipt number in the Receipt Number field.

   The program will display all of the information from the receipt that you selected, allowing you to return all items or edit the quantities and then post the return.

5. Check the header information for the return to make sure that it is correct.

6. To return everything from the receipt, click the Return All button. You can change quantities, if necessary, and delete lines which are not being returned.

   If you are entering returns for cleared receipts (the receipt no longer exists), you enter:

   - The details of the returned items on the detail entry grid on the Return tab of the Return Entry form. With each detail, you must enter the item number, item description, location (if you use Inventory Control), and quantity returned.
- The unit and return cost, unit of measure, unit weight, extended weight, vendor's item number, order number, and comments.
- The general ledger account to which the returned cost is expensed if the detail includes a non-inventory item.

For job-related returns, you enter contract, project, and category information.

You do not enter the quantity received or extended cost.

7. You can edit return details right on the detail entry grid, or on the Items/Taxes form.

8. Click the Taxes tab to check the tax totals. You can change the tax class and tax amount for each jurisdiction, if necessary.

9. Click the Totals tab to check the totals for the return.

10. Click Post to post the return.

- Prorating additional costs

Enter a Credit/Debit Note for a Return or Invoice

**Overview**

To credit/debit a return or invoice:

1. Open Purchase Orders > P/O Transactions > Credit/Debit Note Entry. [Click here for help on Credit/Debit Note Entry fields.]

2. Type the number of the credit/debit note in the Document Number field, and then press the Tab key.

3. Type the vendor number or select it from the Finder.

4. Choose Credit Note or Debit Note as the document type.

5. Type the return or invoice number from which you are creating the credit or debit note, or select it from the Finder.

   The information from the original document is automatically displayed.

   If the return or invoice has already been cleared from Purchase Orders, the program displays a message stating that the document does not exist.

   - Click the Close button in the message box to continue.
   - You will have to add all item details and additional costs for the credit/debit note, and them match it to the invoice in the Accounts Payable module.

6. Check and edit the credit/debit note date and posting date (if they differ from today's date).

7. Enter the total for the credit/debit note in the Credit/Debit Note Total field.

   - If you are entering a credit note from a return, the program will display the total from the return by default.
   - If you are entering a credit or debit note for an invoice, the program will display a zero total.

   **Note:** The amount in this field must match the Credit/Debit Note Total displayed on the Totals page before you can post this document.

8. You can also specify the vendor payment location and change the
vendor account set (to change the Accounts Payable control accounts).

10. Choose the action you want to take:

- If this is a credit note for a return:
- If this is a credit/debit note for an invoice:
- If the return or invoice has been cleared and you are adding credit/debit note detail lines:

11. Once you are finished editing the credit/debit note detail lines, check the information on the remaining credit/debit note tabs:

- The Taxes tab to edit the vendor tax class and to edit the total tax amounts for each jurisdiction.
- The Additional Costs tax to credit/debit additional costs or to add new additional costs to the credit/debit note.
- The Optional Fields tab to add optional field information to this credit/debit note.
- The Rates tab (in a multicurrency system) to change currency exchange rates.
- The Totals tab to check the totals for the credit/debit note, and to add an extended comment.

12. Check the Credit/Debit Note Total field on the Totals tab and make sure that it matches the credit/debit note from the vendor.

13. Return to the Credit/Debit tab to check the Credit/Debit Note Total field.

14. Click Post to post the credit note.

Related topics
Enter or Edit Additional Costs on Credit and Debit Notes

**Overview**

To adjust existing additional costs:

1. Open Purchase Orders > P/O Transactions > Credit/Debit Note Entry. [Click here for help on Credit/Debit Note Entry fields]

2. On the Credit/Debit tab, specify the type of document and select the return or invoice for which you are creating the credit note or debit note.

3. In the detail section, enter the return/invoice quantities, along with cost differences quantities.

4. Choose the Additional Cost tab to display the additional cost details.
   - The additional cost amounts for existing details appear as zero.
   - You enter the amount to be credited or debited.

   **Note:** If this is a credit note for a return, the program will display additional cost details for the primary vendor only.

5. On the Additional Costs tab:
   a. Click in the Amount field for the additional cost detail that you want to adjust. The amount will initially be zero.

   b. Enter the credit or debit amount for the additional cost. You cannot change the proration methods or accounts.

   c. Tab to the end of the detail line to enter a reference and comment.

   **To change the detail tax class for an additional cost:**
   a. Select the additional cost on the Additional Cost entry grid.

   b. Click the Cost/Tax... button or press F9 to open the Detail Costs/Taxes form.

   c. Change the detail tax class, and then click the Calc. Taxes button to recalculate the tax.

   **To change the total tax amount for the credit/debit note**
(including the tax for the additional cost):

a. Select the Taxes tab.

b. Enter the total tax amount to be credited or debited for each tax authority in the Tax Amount column.

6. Click the Total tab to check the additional cost totals and tax totals.

To add new additional costs to debit notes:

1. Go to the Additional Costs tab.

2. Click in the additional cost detail entry grid, press the Insert key, and click the Additional Cost column header to display the Finder.

3. Choose the new additional cost from the Finder, and then:
   a. Tab to the Amount field and enter the amount for the additional charge.
   b. Choose No Proration for the proration method. If you choose to prorate, the program will display an error message and prevent you from posting the debit note.
   c. Tab to the Expense Account field and enter or choose the expense account for the additional charge.
   d. Tab to the Reference and Comments field to provide more information about the cost.

To change the detail tax class for the new additional cost:

a. Select the additional cost on the Additional Cost entry grid.

b. Click the Cost/Tax... button or press F9 to open the Detail Costs/Taxes form.

c. Change the detail tax class, and then click the Calc. Taxes button to recalculate the tax.

To change the total tax amount for the credit/debit note (including the tax for the additional cost):

a. Select the Taxes tab.

b. Enter the total tax amount to be credited or debited for each tax authority in the Tax Amount column.
4. Click the Total tab to check the additional cost totals and tax totals.

5. Click the Post button to post the credit/debit note.

Related topics
Change Tax Information and Tax Amounts on Purchase Orders Documents

**Overview**

To change the total tax amount for a document:

1. Click the Taxes tab on the Purchase Orders, Receipt Entry, Invoice Entry, Return Entry, or Credit/Debit Note Entry form.

2. Edit the Vendor tax class if necessary, and then click the Calc. Taxes button to see the results of the change.

3. To manually change the total tax amount for the vendor, enter new tax totals in the Tax Amount column.

4. Purchase Orders will distribute the updated tax amounts when you move to another tab or post the transaction.

To change tax information for single items:

1. Click the Item/Tax... button on the first tab of the Purchase Orders, Receipt Entry, Invoice Entry, Return Entry, or Credit/Debit Note Entry form.

2. Change the tax class for an authority, or the tax included option, if necessary.

**Note:**

- You cannot change the Tax Included setting unless the tax authority allows it. (Tax authorities are defined in Tax Services.)

- The tax amount will not be automatically recalculated until you close this window and move to another document tab.

- The tax amount will not be recalculated if you overrode the total tax amount on the Taxes tab. If you want to recalculate the tax, you will have to use then Calc. Taxes button on the Order tab, the Taxes tab, or on the Detail Item/Taxes window.

To change tax amounts for additional costs:

1. Click the Additional Costs tab, and then click the Vendor Taxes button.
2. Edit the tax class if necessary, then click the Calc. Taxes button to see the results of the change.

3. To manually change the total tax amount for the vendor's additional changes, enter new tax totals in the Tax Amount column.

4. Purchase Orders will distribute the updated tax amounts to the additional charges when you move to another tab or post the transaction.

**To change tax information for a single additional cost detail:**

1. Click the Additional Costs tab, and then click the Cost/Tax... button to display the Detail Costs/Taxes form.

2. Change the detail tax class for a tax authority, or the tax included option, if necessary.

**Note:**

- You cannot change the Tax Included setting unless the tax authority allows it. (Tax authorities are defined in Tax Services.)

- The tax amount will not be automatically recalculated until you close this window and move to another document tab.

- The tax amount will not be recalculated if you overrode the total tax amount on the Vendor Taxes form. If you want to recalculate the tax, you will have to use the Calc. Taxes button on the Detail Costs/Taxes form or on the Additional Costs tab.
Create Purchase Orders from Requisitions

**Overview**

**To create purchase orders:**

1. Open Purchase Orders > P/O Create Purchase Orders > Create POs from Requisitions.
   
   Click here for help on Create POs from Requisitions fields.

2. Specify the ranges of requisition numbers, dates, and vendors for which to create purchase orders.

3. Choose from the following options:

   - Consolidate Items.
   - Include Blank Vendors.
   - Job Related.

4. Click the Optional Fields tab (if you use optional fields on the purchase orders form), and specify entries for the optional fields that appear on the purchase orders form.

   If you use the same fields on requisitions and purchase orders, the optional field entries on the requisition detail lines will appear by default on the purchase orders unless you specify entries here.

   When you create a purchase order from more than one requisition, the fields on the Optional Fields tab will be taken from the first requisition that you select.

5. Click the Detail Optional Fields tab (if you use optional fields with purchase order details), and specify entries for the optional fields that appear on detail lines.

6. Choose Process to create the purchase orders.

   - Purchase Orders creates a purchase order for each vendor for whom details were entered on requisitions in the ranges you specified.

   - When the purchase orders have been posted, you see a message that lists the range of purchase order numbers that were assigned.
Print a Requisition Immediately After Posting

Before you start

To print a purchase requisition immediately after posting it:

1. Click the Post button while the purchase requisition is displayed.

   When Purchase Orders is finished posting the purchase requisition, it displays a form which it lists the requisition number and asks whether you want to print the requisition.

2. Click Yes to print the requisition. Purchase Orders opens the P/O Requisitions form and selects the requisition you just posted.

3. Complete the information as follows:

   • **Use Requisition.** Use the default requisition report form that appears or click the Browse button to select a different one. (P/O displays the form that you used previously for requisitions.)

   Sage ERP Accepac ships with three standard forms.

   ○ PORQN01.RPT — for printing on blank paper.

   ○ PORQN02.RPT — for printing on preprinted forms.

   ○ PORQN03.RPT — an alternative format for printing on blank paper that includes optional fields.

4. Click Print.

   If you are printing the purchase requisition on a printer, you can click the Align button to print a sample copy of the requisition to check that the information prints in the right places on preprinted forms. If the sample form does not line up correctly, ensure that you have correctly inserted the forms in the printer.
Print a Purchase Order Immediately After Posting

Before you start

To print a purchase order immediately after posting it:

1. Click the Post button while the purchase order is displayed.

   When Purchase Orders is finished posting the PO, it displays a form which it lists the purchase order number and asks whether you want to print the order.

2. Click Yes to print the purchase order. Purchase Orders opens the P/O Purchase Orders form and selects the PO that you just posted.

3. Complete the information as follows:

   - **Use Purchase Order.** Use the default purchase order report form that appears, or click the Browse button to select a different one. (P/O displays the form that you used previously for purchase orders.)

     Sage ERP Accpac ships with four standard forms.

     - POPOR01.RPT — for printing on blank paper.
     - POPOR02.RPT — for printing on preprinted forms.
     - POPOR04.RPT — for printing on blank paper.
     - POPOR05.RPT — for printing on preprinted forms.

     The first two reports connect directly to the P/O database and are easier to change if you need to customize your purchase order forms. The second two print POs more quickly but may be less adaptable to your needs.

   - **Delivery Method.** Choose how you want to send the purchase order to your vendor.

     - Select Print Destination to print to your usual print destination.
     - Select Vendor to use the delivery method specified in each vendor record in the Accounts Payable program (such as e-mail).
If you choose Vendor as the delivery method, select the ID for the e-mail message you want to send with purchase orders for vendors that use e-mail as the delivery method.

To view or edit the message for the selected ID, or to add a new e-mail message for purchase orders, click the Zoom button for the Message ID field.

- **Include Details Already Printed.** Choose whether to include the details that you printed before (if you have now added to the PO) or only details added later.

- **Use Custom Form.** Do not select the Custom Form option unless you are using a customized purchase order form that requires it. (This option is for custom forms that do not use the report selection criteria sent by this print window.)

4. Click Print.

If you are printing the purchase order on a printer, you can click the Align button to print a sample copy of the PO to check that the information prints in the right places on preprinted forms. If the sample form does not line up correctly, ensure that you have correctly inserted the forms in the printer.

Print a Return Immediately After Posting

Before you start

To print a return immediately after posting it:

1. Click the Post button while the return is displayed.

   When Purchase Orders is finished posting the return, it displays a form which it lists the return number and asks whether you want to print the return.

2. Click Yes to print the return. Purchase Orders opens the P/O Returns form and selects the return that you just posted.

3. Complete the information as follows:

   - **Use Return.** Use the default return report form that appears, or click the Browse button to select a different one. (P/O displays the form that you used previously for returns.)

     Sage ERP Accpac ships with two standard forms.

     - PORET01.RPT is used for printing on blank paper.
     - PORET02.RPT is used for printing on preprinted forms.

   - **Delivery Method.** Choose how you want to send the return to your vendor.

     - Select Print Destination to print to your usual print destination.
     - Select Vendor to use the delivery method specified in each vendor record in the Accounts Payable program (such as e-mail).

     If you choose Vendor as the delivery method, select the ID for the e-mail message you want to send with returns for vendors that use e-mail as the delivery method.

     To view or edit the message for the selected ID, or to add a new e-mail message for returns, click the Zoom button for the Message ID field.

   - **Print Serial/Lot Numbers.**

   - **Require Mailing Labels.** Choose whether to print the number of
labels on the Return Totals tab for each return (select the Require Mailing Labels option) or only one label per return (do not select the option).

- **Use Custom Form.** Do not select the Custom Form option unless you are using a customized return form that requires it. (This option is for custom forms that do not use the report selection criteria sent by this print window.)

4. Click Print.

If you are printing the return on a printer, you can click the Align button to print a sample copy of the return to check that the information prints in the right places on preprinted forms. If the sample form does not line up correctly, ensure that you have correctly inserted the forms in the printer.

Print Purchase Orders

- Overview
- Before you start

To print purchase orders:

1. Open Purchase Orders > P/O Forms > Purchase Orders.

2. Fill in the fields as follows:

- **Use Purchase Order.** Choose the report format that you want to use for printing purchase orders.
  
  You can accept the default PO report form that appears or click the Browse button to select a different one. (P/O displays the form that you used previously for purchase orders.)

  Sage ERP Accpac ships with four standard forms.
  
  - POPOR01.RPT — for printing on blank paper.
  - POPOR02.RPT — for printing on preprinted forms.
  - POPOR04.RPT — for printing on blank paper.
  - POPOR05.RPT — for printing on preprinted forms.

  The first two reports connect directly to the P/O database and are easier to change if you need to customize your purchase order forms. The second two print POs more quickly but may be less adaptable to your needs.

- **From Purchase Order Number/To Purchase Order Number.** Specify the range of purchase orders that you want to print.

- **Delivery Method.** Choose how you want to send the purchase order to your vendors.
  
  - Select Print Destination to print to your usual print destination.
    
    If printing to a printer, you can also print mailing labels for purchase orders, and then mail the POs.
  
  - Select Vendor to use the delivery method specified in each vendor record in the Accounts Payable program (such as e-
If you choose Vendor as the delivery method, select the ID for the e-mail message you want to send with purchase orders for vendors that use e-mail as the delivery method.

To view or edit the message for the selected ID, or to add a new e-mail message for purchase orders, click the Zoom button for the Message ID field.

- **Include Active / Future / Standing / Blanket Orders.** Choose the types of purchase orders to print (Active, Future, Blanket, Standing).
- **Include Purchase Orders Already Printed.** Choose whether to print new copies of purchase orders that you printed before.
- **Include Details Already Printed.** Choose whether to include the details that you printed before (if you have now added to the PO) or only details added later.
- **Use Custom Form.** Do not select the Custom Form option unless you are using a customized purchase order form that requires it. (This option is for custom forms that do not use the report selection criteria sent by this print window.)

3. Click Print.

If you are printing purchase orders on a printer, you can click the Align button to print a sample copy to check that the information prints in the right places on a preprinted PO form.
Print Receiving Slips

To print receiving slips:

1. Open Purchase Orders > P/O Forms > Receiving Slips.

2. Fill in the fields as follows:
   - **Use Receipt.** Choose the report format that you want to use for printing receiving slips.
     
     You can accept the default receipt report form that appears or click the Browse button to select a different one. (P/O displays the form that you used previously for receiving slips.)

     Sage ERP Accpac ships with four standard forms.
     - PORCP01.RPT — for printing on blank paper.
     - PORCP02.RPT — for printing on preprinted forms.
     - PORCP03.RPT — for printing on blank paper (include quantities received and costs).
     - PORCP04.RPT — for printing on preprinted forms (include quantities received and costs).

     **Note:** Pre-printed forms PORCP03.RPT and PORCP04.RPT will print cost information. If you want to hide costs on these forms, you will need to customize them.

   - **From Receipt Number/To Receipt Number.** Specify the range of receipts that you want to print.

   - **Include Receipts Already Printed.** Choose whether to print new copies of receiving slips that you printed before.

   - **Print Serial/Lot Numbers.** Choose to print the serial and/or lot numbers of any serialized or lotted items included in the receipts.

3. Click Print.
   
   If you are printing receiving slips on a printer, you can click the Align
button to print a sample copy to check that the information prints in the right places on a preprinted receipt form.

Print Returns

Before you start

To print returns:

1. Open Purchase Orders > P/O Forms > Returns.

2. Fill in the fields as follows:

- **Use Return.** Choose the report format that you want to use for printing returns.
  
  You can accept the default return report form that appears or click the Browse button to select a different one. (P/O displays the form that you used previously for returns.)

  Sage ERP Accpac ships with two standard forms.
  
  - PORET01.RPT — for printing on blank paper.
  - PORET02.RPT — for printing on preprinted forms.

- **From Return Number/To Return Number.** Specify the range of returns that you want to print.

- **Delivery Method.** Choose how you want to send the return to your vendor.
  
  - Select Print Destination to print to your usual print destination.
  - Select Vendor to use the delivery method specified in each vendor record in the Accounts Payable program (such as e-mail).

  If you choose Vendor as the delivery method, select the ID for the e-mail message you want to send with returns for vendors that use e-mail as the delivery method.

  To view or edit the message for the selected ID, or to add a new e-mail message for returns, click the Zoom button for the Message ID field.

- **Include Returns Already Printed.** Choose whether to print new copies of returns that you printed before.
• **Print Serial/Lot Numbers.** Choose to print the serial and/or lot numbers of any serialized or lotted items returned.

• **Require Mailing Labels.** Choose whether to print the number of labels on the Return Totals tab for each return (select the Require Mailing Labels option) or only one label per return (do not select the option).

• **Use Custom Form.** Do not select the Custom Form option unless you are using a customized return form that requires it. (This option is for custom forms that do not use the report selection criteria sent by this print window.)

3. Click Print.

   If you are printing returns on a printer, you can click the Align button to print a sample copy to check that the information prints in the right places on a preprinted PO form.

Print Mailing Labels

Overview

Before you start

To print mailing labels:

1. Open Purchase Orders > P/O Forms > Mailing Labels.

2. Fill in the fields as follows:

   - **Use Label.** Choose the report format that you want to use to print labels.
     You can accept the default label report file that appears, or click the Browse button to select a different one. (P/O displays the form that you used previously for labels.)

     Sage ERP Accpac ships with two standard labels:

     - POLABEL.RPT — print 12 labels on an 8.5 x 11 page (2-up).
     - POLABELP.RPT prints 14 labels on an 8.5 x 11 page (2-up).

   - **Select.** Choose whether to print labels for purchase orders or returns.

   - **From/To.** Specify the range of document numbers for which you want to print labels.

   - **Include Labels Already Printed.** Choose whether to print new copies of labels that you printed before.

   - **Print Only Labels Marked Required.** Choose to print either:
     - The number of labels on the Purchase Orders or Return Totals tab (select the Print Only Labels Marked Required option)

3. Click Print.

   If you are printing labels on a printer, you can click the Align button to print a sample copy of the label to check that the information prints in the right places on label stock.
View Pending Receipts

To view pending receipts:

1. Open Purchase Orders > P/O Statistics and Inquiries > Pending Receipts Inquiry.

2. Choose whether you want to inquire by item or by vendor, and then select the item number or vendor number for which you want to view details.

3. Select a range of locations, or skip the Location fields to display all locations.

4. In the PO Date fields, leave the From and To fields blank to include all purchase orders, or specify a range of PO dates.

5. In the Expected Arrival Date fields, leave the From field blank to include all purchase orders with outstanding items, and enter the end date for the inquiry in the To field.

6. Choose Include Completed Detail Lines to see if items were delivered within the expected arrival times.

7. Choose Show Late POs Only to see incomplete detail lines that are past their expected arrival dates.

8. Click the Go button (►).

The program fills in the detail grid with PO line information that matches the select criteria that you specified:

- Purchase Order Number
- Line Number
- Item Number
- Item Description
- Vendor Number
- Vendor Name
- Location
- Quantity Ordered
- Expected Arrival Date
9. To view more information for any PO line item — such as receipt quantities and days late — double-click the PO line on the detail grid, or select the line and click the Details button.

The program displays the following additional information for each receipt associated with the PO line:

- Receipt Number
- Contract, Project, Category (if job-related)
- Quantity Ordered
- UOM
- Quantity Received
- Date Received
- Expected Arrival Date
- Days Late
Look Up Purchase History

Overview

To look up purchase history:

1. Open Purchase Orders > P/O Statistics and Inquiries > Purchase History.
   
   Click here for help on Purchase History fields.
   
   Click here for help on Purchase History detail fields.

2. Select the range of year and period for which you want to see purchase history.

3. Choose:
   - Vendor — to view all of the items ordered from and returned to a particular vendor.
   - Item Number — to view all of the vendors who supplied a particular item.

4. Choose your functional currency or the vendor currency, if you have a multicurrency system.

5. Click the Go button (››).
   
   If you chose Vendor, above, the program lists all of the item details on invoices or returns for the vendor.

   If you chose Item Number, the program lists all of the invoices and returns on which the item that you specified appears.

6. Highlight a line and click the Details button for more information on the source document.

Related topics
Look Up Purchase Statistics

If you use the Accumulate Purchase Statistics option, you can view purchase statistics for the years and statistical periods for which you keep data.

To look up purchase statistics:

1. Open Purchase Orders > P/O Statistics and Inquiries > Purchase Statistics.
   
   Click here for help on Purchase Statistics fields.

2. Select the year, period, and currency for which you want to see purchase statistics.

Related topics
Look Up Transaction History in Inventory Control

The Inventory Control module lets you look up transactions created in Sage ERP Accpac Purchase Orders, Order Entry, or Inventory Control.

To look up transactions:

1. Open Inventory Control > I/C Statistics and Inquiries > Transaction History Inquiry.

2. To change the fiscal year and period, select a new one from the drop-down list beside the As At Year/Period field.

3. Enter the beginning and ending item numbers, or select them using the Finders.

4. Enter the beginning and ending account set numbers, or select them using the Finders.

5. Enter the beginning and ending location numbers, or select them using the Finders.

6. When you are satisfied with your inquiry criteria, click the Go button.

7. A list of items matching your criteria is displayed. To view a list of recent transactions involving an item, select the item from the list and click the Details button.

8. The list includes the document number and other information about the transaction.

9. To drill down to the original document, highlight a transaction and click the Details button.

Sage ERP Accpac will display the original transaction unless it has been cleared from the database.
Perform Day-End Processing

Run day-end processing as part of your daily routine, to keep your audit trail and reports up to date. You can run day-end processing as many times a day as you want.

What does Day-End Processing do?

Before you start

To perform day-end processing:

1. If you have the Inventory Control module, open Inventory Control > I/C Periodic Processing > Day End Processing.

   If you do not have Inventory Control, open Purchase Orders > P/O Periodic Processing > Day End Processing.

2. Click Process.

3. When the message appears to indicate that processing is complete, click the OK button or press Enter to close the message and the Day End Processing form.

Set Up Manual Requisition Approval

**Overview**

To set up requisition approval in Purchase Orders:

1. Turn on security for the system database in Sage ERP Accpac's database setup program to use database security features.
   a. In MS Windows, click Start > Programs > Sage Software > Database Setup.
   b. Enter your administrator password and click OK.
   c. Double-click the system database for which you are turning on security.
   d. Select the Enable Application Security option, and click OK.

2. Create security groups in Sage ERP Accpac for requisition entry and requisition approvers.
   a. In Sage ERP Accpac ERP, open Administrative Services > Security Groups.
   b. Choose Purchase Orders from the drop-down list.

   **To create a security group of PO approvers:**
   i. Choose an existing P/O security group ID or enter a new group ID and description.
   ii. Select Requisitions Manual Approval to grant PO approval rights.
   iii. Assign any other rights that you want to attach to this security group.

   **To create a security group for requisition entry only:**
   i. Choose an existing P/O security group ID or enter a new group ID and description.
   ii. Select Requisitions Entry to allow users to enter requisitions.
   iii. Do **not** provide Purchase Order Entry rights or Requisitions Manual Approval rights if you want to prevent users from
approving requisitions/POs.

iv. Assign any other rights that you want to attach to this security group.

For example, you can choose whether or not users can view requisition and receipt costing information.

3. Assign employees to the appropriate security groups.

a. In Sage ERP Accpac ERP, open Administrative Services > User Authorizations.

b. Choose the User ID that you want to assign to a security group.

c. Select Purchase Orders from the list of applications.

d. Choose the appropriate security group ID for the user.

Add Optional Fields to Records and Transactions

Overview

Before you start

To add optional fields to miscellaneous charges, transactions, and transaction details:

1. Open Purchase Orders > P/O Setup > Optional Fields.
   
   Click here for help on all Optional Fields setup fields.

2. Select a record/transaction type from the Optional Fields For list.
   
   Click here for more information.

3. Click in the optional field entry grid, and then press the Insert key on your keyboard to start a new line.

4. Click the Finder (or press F5) in the Optional Field column, then choose an existing optional field from the Finder list. (The description will appear automatically.)

5. Click the Finder in the Default Value column, then choose the value for the optional field selected in step 3.

6. Toggle in the Auto Insert column to:
   
   - Choose Yes if you want to allow the optional field (and its default value) to appear in new records and transactions.
   
   - Choose No if you do not want the optional field to appear automatically.

7. Click the Settings button to select the G/L accounts that this optional field will be included with for G/L transactions and transactions sent to other subledgers.
   
   Click here for a list of G/L accounts for purchase order, receipt, invoice, return, and credit/debit note transaction details.

Consider carefully the purpose of each optional field that you add.

For example, only send optional fields to General Ledger that are used for financial analysis, and only to the accounts where they are
required.

8. Click the Close button to close the Settings form. Click the add button on the P/O Optional Fields form, and then click Close.

Make sure that no one else is using the Purchase Orders data and that no other Purchase Orders forms are open for the company before you save changes.

- After adding optional fields to P/O
- Related topics
Change Purchase Orders Processing Options

You cannot change settings on the Processing tab of the P/O Options form if other Purchase Orders forms are open, or other users are working with the Purchase Orders database.

Make sure that no one else is using the Purchase Orders data and that no other Purchase Orders forms are open for the company before you save changes.

- **Changing settings**
- **Before you start**

**To change P/O processing options:**

1. Open Purchase Orders > P/O Setup > Options.
   
   Click here for help on all Options fields.

2. Click the Processing tab.

   These are the options you can select or change on the Processing tab in the P/O Options form.

- Accumulate By
- Accumulate Purchase History
- Accumulate Statistics
- Allow Edit of Statistics
- Allow Fractional Quantities
- Allow Non-Existing Vendors
- Allow Non-Inventory Items
- Default Copy Costs to Purchase Order
- Default Item Cost
- Default Posting Date
- Default Rate Type
- Default Template Code
- Default Weight Unit of Measure
- Functional Currency (display only)
- Keep Transaction History
- Multicurrency option (display only)
- Post A/P Batches During Posting or Day End Processing / On Request Using Create Batch Icon
- Inventory Control
- Period Type
- Require Approval
- Update Most Recent Cost and Last Cost at Receipt Costing or Invoice Costing

**Note:**

- Use the I/C Options form in Inventory Control to change whether
inventory is costed when posting Purchase Orders transactions or during day end processing.

Costing items and creating subledger transactions and audit information during posting will increase the time it takes to post transactions in Inventory Control, Order Entry, and Purchase Orders.

- If you change from updating costs during day end processing to updating costs during posting, you must first run day end to cost all outstanding posted P/O, I/C, and O/E transactions.

3. Click the Save button to save any changes to processing options.

Change General Ledger Integration Options

You cannot change settings on the Integration tab of the G/L Integration form if other Purchase Orders forms are open, or other users are working with the Purchase Orders database.

Make sure that no other Purchase Orders forms are open for the company before you save changes to the G/L Integration form.

To change General Ledger integration options:

1. Open Purchase Orders > P/O Setup > G/L Integration.

2. The Integration tab lets you change these options:

   - Create G/L Transactions
   - Create G/L Transactions by Consolidate G/L Batches
   - Transaction Type
   - Source Ledger
   - Source Type

3. Click the Transaction tab to change the information that appears with G/L transactions for the G/L Detail Comment, G/L Detail Description, G/L Detail Reference, and G/L Entry Description.

   The Entry grid lists each of the transactions produced by Purchase Orders, and displays the information that is currently included in G/L transactions produced from these P/O transactions.

   a. Double-click the transaction description or transaction detail information that you want to change.

   b. On the form that appears, highlight the information that you want to add to the transaction field, and use the Include and Exclude buttons to add or remove field information.

      You can assign one or more pieces of information (segments) to each G/L transaction field, provided that the combined length of the segments and separators does not exceed 60 characters. Fields exceeding this limit will be truncated when you post the general ledger transactions.

   c. Click Save to save the contents of the G/L transaction field.
d. Choose a different field to edit, or click Close to return to the Transaction tab.

4. Click Save to save changes to the G/L Integration form.

- [ ] After changing G/L Integration Options
- [ ] Related topics
Change Posting and Day End Processing Options

Note:

• If you are using the Inventory Control Module, Day End Processing options are set up in the Inventory Control module.

If you are not using Inventory Control, Day End Processing options are set up in the Purchase Orders module.

These options also affect when the Purchase Orders module can post General Ledger and Accounts Payable batches.

• You cannot change day end processing options if any Inventory Control forms are open, or if other users are working with Purchase Orders.

Overview

Before you start

To change batch creation and posting options for A/P transactions created by Purchase Orders:

1. Open Purchase Orders > P/O Setup > Options.

   Click here for help on all P/O Options.

2. Click the Processing tab.

3. Change the following option.

   Post A/P Batches During Posting or Day End Processing/On Request Using Create Batch Icon

   Note: If you choose to post A/P batches when you post P/O transactions, and you cost inventory during transaction posting, Purchase Orders will create and post an A/P batch each time you post an invoice.

4. Click the Save button when you are finished.

To change batch creation and posting options for G/L transactions created by Purchase Orders:

If you are now using the Create Batch form to create transactions, print a copy of the latest G/L Transactions report, then create any outstanding
transactions *before* changing your choice for this option.

1. Open Purchase Orders > P/O Setup > G/L Integration.

   [Click here for help on all G/L Integration fields.]

2. Change the appropriate option.

   - Create G/L Transactions
   - Create G/L Transactions by Consolidate G/L Batches

3. Click the Save button when you are finished.

   Make sure that no one else is using the Purchase Orders data and that no other Purchase Orders forms are open for the company before you save changes.

**To change day end processing options in the Inventory Control module (or in Purchase Orders if you do not use Inventory Control):**

1. Open Inventory Control > I/C Setup > Options.

   (Or open Purchase Orders > P/O Setup > Options if you do not use Inventory Control.)

2. Click the Costing tab.

3. Change the appropriate option.

   - Cost items during posting or Day End Processing
   - Create Subledger Transactions and Audit Info. During (Posting / Day End Processing)

4. Click the Save button when you are finished.

   Make sure that no one else is using the Inventory Control (or Purchase Orders) data and that no other Inventory Control (or Purchase Orders) forms are open for the company before you save changes.

**To change batch creation and posting options for G/L transactions created by Inventory Control:**

Inventory Control generates G/L transactions from purchase order receipts and returns.

1. Open Inventory Control > I/C Setup > G/L Integration.

2. Change the appropriate option.

   - Consolidate G/L Batches
   - Create G/L Transactions
   - Create G/L Transactions by Consolidate G/L Batches
3. Click the Save button when you are finished.

Make sure that no one else is using the Inventory Control data and that no other Inventory Control forms are open for the company before you save changes.

Save Personal Report Settings for Future Printing

Sage ERP Accpac lets you save report settings as defaults for printing Purchase Orders forms (such as purchase requisitions, POs, receiving slips, returns, and mailing labels) and for several Purchase Orders Analytical reports, including the Transaction List, Purchase Order Action Report, Aged Purchase Orders, and Purchase History reports.

**To save current settings as defaults:**

1. Open the Purchase Orders form or report for which you want to save printing settings.
2. Choose each of the settings on the print form that you want as a default setting.
3. Select Settings > Save Settings As Defaults from the report menu.

**To clear saved settings:**

1. Open the Purchase Orders form or report for which you want to reset printing settings.
2. Select Settings > Clear Saved Settings from the report menu.
Importing and Exporting Purchase Orders Records

Choose the type of information you wish to import or export:

- Importing and exporting Purchase Orders setup records
- Importing and exporting Purchase Orders transactions

For information about restricting access to the importing and exporting processes, see:

- Export Processing security access
- Import Processing security access
### Entering Current Requisitions and Purchase Orders

To properly set up your Purchase Orders system, you should enter and post all requisitions and purchase orders that are open when you are setting up.

When you post purchase orders, quantities on purchase order are updated in Inventory Control.

You can run Day End Processing after posting requisitions and purchase orders to update history and statistics in both Purchase Orders and Inventory Control (if you keep history and statistics in both programs). You can also add some statistical information from your previous system, as described in [Entering statistics for the current and previous periods](#).

You use the [Requisition Entry](#) and [Purchase Order Entry](#) forms to add the transactions.

**See also**

[Steps for setting up Purchase Orders](#)
Choosing Purchase Orders Options

Once you have activated Purchase Orders, your first task is to use the Purchase Orders Options form to enter general ledger information and choose which Purchase Orders options you want to use.

Your choices determine how your Purchase Orders system operates and the types of data that it stores and displays. You can also use the form after setup to review your entries and, as needed, change most of them.

Using the Purchase Orders Options data-entry form. You can record the options you want to use on the Purchase Orders Options form, one of the data entry forms shipped with Purchase Orders.

You can transfer the information from the completed form to the Options form when you set up your system.

Company Information

You keep and update most company information using the Company Profile form in Common Services. However, you can store the name of a Purchase Orders contact person or position, and enter their telephone and fax numbers on the Company tab of the Options form.

The Company tab also displays the name and address entered for the company in Common Services. To change the company name and address, use the Company Profile form in Common Services.

Setting Up Optional Fields

You must install Sage ERP Accpac's Transaction Analysis and Optional Field Creator before you can use optional fields.
To set up optional fields:

1. Set up system-wide optional fields in Common Services.
   
   Before adding optional fields for Purchase Orders, you first define optional fields for all of your Sage ERP Accpac system using the Optional Fields form in Common Services.

2. Use the Optional Fields form in the P/O Setup folder to:
   
   a. Assign optional fields to:
      
      - Requisitions, purchase orders, receipts, invoices, returns, and credit/debit notes.
      - Requisition, purchase order, receipt, invoice, return, and credit/debit note transaction details.
      - Additional costs and receipt additional costs.
      - Receipt additional cost details, invoice additional cost details, and credit/debit note additional cost details.
      - Item records defined in Purchase Orders (if you are not using Inventory Control).
   
   b. Specify a default value for each optional field that you add to Purchase Orders (depending on the type of field), and indicate whether the optional field will be automatically inserted in new records or transactions.
      
      If an optional field requires validation, you can select only a value that is assigned to the optional field in Common Services. (If the optional field allows blanks, you can leave the default value field blank.)
      
      If the optional field does not use validation, you can select a value from the list (if any were assigned in Common Services), leave the field blank, or enter any value that is consistent with the type of field (yes/no, text, number, date, amount, and so on) and does not exceed the maximum number of characters permitted for the optional field.
   
   c. Use the Optional Fields Settings button to specify which optional
fields will be sent through to other Sage ERP Accpac subledgers, and which will be included in transactions that will be passed to General Ledger for posting to G/L accounts.

By default, all optional fields in Purchase Orders that match fields in Accounts Payable and in General Ledger accounts will be passed to A/P and G/L unless you restrict the fields using the Settings button.

For example, the Settings button for invoice detail optional fields, lets you choose the types of G/L accounts that will get optional field information from invoice details, and the details in an Accounts Payable invoice that will get optional field information.

**Note:** The Settings button is only active for those forms that pass information to another Sage ERP Accpac program. For example, invoice optional fields can be passed to Accounts Payable, but requisitions are used only in the Purchase Orders program.

3. Make sure that you use the same optional fields for invoices in Accounts Payable and for general ledger accounts in the General Ledger program in order to pass information between programs.

**Optional fields that flow to A/P.** The following optional field information can be passed to Accounts Payable from Purchase Orders (and from Accounts Payable to G/L through payables transactions):

- Invoice/credit note/debit note header and detail optional fields if the optional fields assigned to Accounts Payable invoices match the optional fields assigned to Purchase Orders invoices and credit/debit notes.

**Optional fields that flow directly to G/L.** The following optional field information can be passed to General Ledger directly from Purchase Orders:

- Invoice/credit note/debit note detail optional fields if the transaction optional fields assigned to G/L accounts match the optional fields assigned to P/O invoice and credit/debit note details.
- Receipt and return detail optional fields if the transaction optional fields assigned to G/L accounts match the optional fields assigned to
P/O receipt and return details.

If you use Sage ERP Accpac Project and Job Costing, you can also specify whether optional field information for job-related transactions will be passed to Project and Job Costing (as an external cost transaction).

E-Mail Messages Form

You can create e-mail messages to use when sending purchase orders and returns, specifying codes for adding information specific to the vendor or specific to your company. Each e-mail message is identified by a unique 16-character message ID code.

To e-mail purchase orders and returns, you must:

- Choose E-mail or Contact's E-mail as the delivery method for the vendor in the Accounts Payable.
- You must select Vendor as the Delivery Method when you print Returns and Purchase Orders. You select the particular e-mail message that you want to use when print the purchase orders or returns.

The form for creating e-mail messages is located in the P/O Setup folder.

To use the E-mail Messages form:

1. Select either Return or Purchase Order in the Message Type field.
2. In the Message ID field, enter a code to identify this message, using up to 16 characters.
3. In the Description field, enter a description for the message, using up to 60 characters.
4. Enter the subject of the message in the E-mail Subject field.
5. Enter the body of the message. Use information codes, preceded by a dollar sign, to identify variable information that you want to include with the message.
6. Click Add or Save when you are satisfied with the message.

- Select the Inactive option only if you wish to make this message unavailable for use.
- The Last Maintained field shows the last time you modified this e-mail message.

New Features in Purchase Orders 5.6

Purchase Orders version 5.6A includes reporting enhancements as well as features for handling serialized and lotted inventory, which previously required installation of a separate Accpac application.
Serialized Inventory and Lot Number Features

Previous to the 5.6 release, a separate Sage ERP Accpac application was required to handle inventory items with serial or lot numbers. Purchase Orders 5.6 now has integrated features for serialized and lotted inventory items. You may be prompted to generate or enter serial and/or lot numbers when specifying quantities during the following tasks:

- Entering Receipts
- Generating Invoices
- Creating Debit or Credit Notes
- Processing Returns
New Reporting Features

- The *Purchase Order Action report* now allows you to select by document date and sort by item number.

- The *Purchase History Report* now has options to include serial and lot numbers on the report and select by document date. As well, when the Purchase History Report is opened using the Purchase History inquiry form, the selections made in the original inquiry are used to automatically fill in fields in the Purchase History Report form.

- The *Purchase History inquiry form* allows you to view serial and lot numbers for selected transaction that involve serialized or lotted items.

- You can now include serial and lot numbers when *printing Posting Journals* and transaction listings.

- The *Purchase History Report* now has an option to print by document date.

- You can include serial and lot numbers when printing *Receiving Slips* and *Return Forms*.

In addition to the new program features, there are also changes to the documentation included in *Purchase Orders 5.6* program.

- [Features Added in Purchase Orders 5.5A](#)
- [Features Added in Purchase Orders 5.4A](#)
- [Features Added in Purchase Orders 5.3A and 5.3B](#)
This topic lists the features added to Purchase Orders in version 5.5A, and provides further explanation for some of these features.

**Purchase Orders 5.5 included the following enhancements:**

- Specify costs on requisitions.
- Copy Purchase Orders like the Order Entry feature Copy Orders.
- Optionally require approvals for requisitions.
- Choose whether POs are allowed for non-existing vendors.
- Inquire on items that are expected to arrive within a specified date range.
- Support for multiple customers in each contract.
- Support for units of measure conversions in job-related transactions.
- Optionally update the most recent cost and last cost at receipt time or at invoice time.
- Cost inventory items during posting but delay creating transactions and audit information until you run Day End Processing.
- Transfer assets to the Sage Fixed Assets (FAS) module when receiving items for internal use.
- Turn off warnings that items do not exist.
- Enter different document dates and posting dates for transactions.
- Specify the source type codes for G/L transactions.
- Override the vendor account set during purchase order entry.
- Post transactions faster.

- Retainage Accounting for Job-Related Receipts and Invoices
- ?Use Custom Form? Check box for Purchase Orders and Returns
- Purchase Orders Documentation
This topic lists the features added to Purchase Orders in version 5.4, and provides further explanation for some of these features.

**Purchase Orders 5.4 added the following features:**

- Set up contract pricing for inventory items, including regular vendor costs, volume discounts, sale costs, item tax statuses, and default units of measure.

  All vendors — contract costs appear in the Finder on the Purchase Order, Receipt, Invoice, Return, and Credit/Debit Note entry forms. As a result, users can easily review vendors — contract cost information while entering a purchase order documents.

  Vendor contract costs provide the default unit cost of items in Purchase Order documents. If contract costs don't exist for an item, the program uses the default unit cost specified in P/O Options in the Purchase Order Entry or Receipt Entry form.

- Report taxes on retainage amounts when you issue the original invoice or when you issue the retainage amounts.

  Purchase Orders uses the settings for the tax authority in Tax Services, and the Report Tax setting in Accounts Payable to decide whether to report all tax on the original invoice or hold back the tax amount for the retainage portion.

- Print the invoice posting journal showing audit information for the invoices that are created in Accounts Payable and for any General Ledger entries created from posting the invoice.

  **Posting Journals -- Features**

- Assign specific users security rights to view and enter item costs during receipt entry.

  In version 5.4, users with Receipt Entry rights only can create receipts from POs, specify quantities received, and post receipts, but they cannot see any cost information.

  This means that receiving dock staff can fill in receipts without seeing any other accounting system information.
• Automatically post General Ledger and Accounts Payable batches created from Purchase Orders.
  
  Create G/L Transactions by
  Post A/P Batches

• Specify a tax reporting currency and automatically calculate taxes in source currency, functional currency, and tax reporting currency. (This feature provides support for legislation in several tax jurisdictions.)
  
  Tax Reporting Currency

• If you are not using Inventory Control, set up weight units of measure and assign them to items on the purchase item list. This allows you to accurately prorate additional costs by weight.
  
  Setting Up Weight Units of Measure

Other features added to all Sage ERP Accpac 5.4 applications:

• Optional Fields in Finders

  Optional fields now appear in Finders for Purchase Orders records, so you can search for and select records using the entries in optional fields.

• Required Optional Fields without Default Values

  In version 5.3 of Sage ERP Accpac, you had to specify a default value for any optional fields that were required in transaction forms or records. This is no longer the case. Note, however, that you must make an entry for all required fields before you can save records or post transactions.

  Setting Up Optional Fields

• G/L Integration Options

  Like other Sage ERP Accpac 5.4 products, Purchase Orders lets you choose the information that appears in description, reference and comment fields for General Ledger transactions generated from P/O transactions.

  You specify this information on the G/L Integration form, where you can also choose to automatically post all General Ledger batches that are created by Purchase Orders.

- Purchase Orders Documentation
Selecting G/L Integration Options

General ledger transactions are created from Purchase Orders transactions at one of the following times:

- **Whenever you choose**, using the Create Batch Icon in the Purchase Orders Periodic Processing folder.
  
  You choose this option from the G/L Integration form in the Purchase Orders Setup folder.

- **When you post transactions.**
  
  - Choose to cost inventory items during posting (in the Inventory Control Options form, if you are using the Inventory Control module, or in the P/O Options form if you are not using I/C).
  
  - Do not choose to create G/L transactions using the Create Batch icon in the G/L Integration form. Choose to create G/L transaction during posting. (Note: If the program is set to cost items during Day End Processing, choose During Day End Processing, and then change the setting for costing inventory items.)

- **When you run Day End processing.**
  
  - Choose to cost inventory items during Day End Processing (in the Inventory Control Options form, if you are using the Inventory Control module, or in the P/O Options form if you are not using I/C).
  
  - Do not choose to create G/L transactions using the Create Batch icon in the G/L Integration form. Choose to create G/L transaction during Day End Processing. (Note: If the program is set to cost items during posting, choose During Posting, and then change the setting for costing inventory items.)

If you installed and activated Sage ERP Accpac General Ledger, Purchase Orders, and Inventory Control for the same database, the general ledger transactions are automatically placed in new general ledger batches (and optionally posted) or added to existing batches either when you post Purchase Orders transactions, or run day-end processing, or use the Create Batch icon at a later time that you choose.
If your general ledger is at another location or in a separate database, Purchase Orders' general ledger transactions are appended to a file you can import into another general ledger, or print, then enter manually into your general ledger.

The G/L Integration options you can select include:

- Adding G/L Transactions to Existing Batch
- Posting Transactions Automatically to the General Ledger
- Consolidating G/L Batches
- Create G/L Entries for Expensed Additional Costs
- Create G/L Entries for Non-Inventory Expenses from Receipts/Returns
- Create General Ledger Transactions
- G/L Reference Field
- G/L Entry Description Field
- G/L Detail Description Field
- G/L Detail Comment Field
- Default Inventory Expense Account
- Default Cost Expense Account
- Expensed Additional Cost Payables Clearing Account
- Non-Inventory Payables Clearing Account

The Integration tab in the G/L Integration form also displays the day-end number up to which you have created general ledger batches. You can compare this number to the current day end number in the P/O Options form to make sure you have created all outstanding general ledger transactions.
Changing your choices for General Ledger options

You can change your selections for all the general ledger options in the Purchase Orders G/L Integration form at any time. Your new choices are used only in the general ledger transactions that are created after you make the change, and do not affect general ledger batches that already exist.
Using Purchase Orders and General Ledger at the same site

If you use Sage ERP Accpac General Ledger with Purchase Orders, the Purchase Orders general ledger batches are created in General Ledger. To avoid making accidental changes to General Ledger batches created by Purchase Orders, select No Edit for the Edit Imported Entries option in the General Ledger Options form.

See also

- Reporting General Ledger data
- Selecting Processing Options
- Selecting Document Numbering Options
- Selecting Optional Fields
- Steps for setting up Purchase Orders
Entering Purchase Orders Setup Information

Before you add transactions to Purchase Orders, define the transaction-entry templates you want to use and add records for the shipping methods and additional costs (such as service and handling charges) you frequently enter with purchase orders and other transactions.

You do not have to use templates or ship-via codes in Purchase Orders, and you need to add records for additional costs only if you enter these costs as separate amounts on transactions.

Choose icons from the Setup folder to add these records:

- Setting up account sets (stand-alone program)
- Setting up additional cost codes
- Setting up items (stand-alone program)
- Setting up ship-via codes
- Setting up templates
- Setting up vendor details
See also

- Designing Purchase Orders codes
- Importing and exporting Purchase Orders setup records
- Setting up Purchase Orders without Inventory Control (stand-alone)
- Steps for setting up Purchase Orders
Allowing Transactions That Use Fractional Quantities

The option Allow Fractional Quantities is available in Purchase Orders only if you do not use Inventory Control.

To allow transactions that use fractional quantities (you can use up to four decimal places), select the Allow Fractional Quantities option on the Processing tab in the Options form. You can select the Allow Fractional Quantities option at any time but, once you select the option, you cannot change back.

Fractional quantities are useful if your inventory includes homogeneous items. (Homogeneous items are those with identical elements which can be broken down into multiple, smaller units, such as oil or grain.) These items can require a wide range of units of measure.

Instead of using the smallest unit (such as ounces) as the stocking unit, use a larger stocking unit (such as pounds) and fractional quantities for amounts less than a pound.

If you do not intend to enter any transactions that use fractional quantities, you can simplify transaction entry by not selecting the Allow Fractional Quantities option. This means you do not have to enter decimal places for quantities, and it means that unnecessary decimal places do not appear on reports.
Defining a Unit of Weight for Items

If you do not use Inventory Control, you can specify a weight unit of measure (such as pounds or kilograms) that you will use for all items in the Purchase Orders item list.

Purchase Orders can use the weight unit of measure to prorate (distribute) additional costs on orders.

If you change the weight unit of measure, you need to update the weight in each previously added item record to make it consistent with the new weight unit of measure.

For example, suppose the weight unit of measure is kilograms and you add an inventory item that weighs one kilogram. If you then change the weight unit of measure to pounds, you need to change the item’s weight to 2.2 to agree with the new weight unit of measure.
Setting Up Account Sets

The Account Sets form is available in Purchase Orders only if you do not use Sage ERP Accpac Inventory Control. If you use Inventory Control, you set up account sets using that program.

Account sets are groups of general ledger accounts to which you post Purchase Orders transactions. By defining more than one account set, you can separate information for different types of items in your general ledger.

You can use as many account sets as you need for your inventory items. For example, you may wish to use separate account sets for different item categories, for items assembled in different areas, or for items obtained from different suppliers.

When you add an account set, you enter a unique code of up to six characters to identify the set, and a description (for example, Assembled Items). Account set codes can contain letters and numbers.

For each account set, you enter account numbers for the following general ledger accounts:

- **Payables Clearing.** A suspense account to which Purchase Orders posts the "other side" of the accounting entries for items you receive (and for previous receipts you return to suppliers).

  Purchase Orders normally generates credit entries to this account for items you receive. Therefore, the account can be thought of as the accrued amount payable for goods received. Purchase Orders debits this account when you enter receipt returns.

  As you post the related vendor invoices in Sage ERP Accpac Accounts Payable, offsetting journal entries (debits) related to the items purchased are generated against the Payables Clearing account to clear the balance that is left in this account from posting the inventory receipt.

- **Inventory/Expense.** The account that you debit when you receive items and credit when you enter returns.

For step-by-step instructions on using the Account Sets form to add, edit,
or delete an account set record, see Account Sets form.

Return to Setting up Purchase Orders without Inventory Control.
Setting Up Items

Before you can enter inventory transactions, you need to add item records. Item records contain information about items that you regularly purchase from your vendors for sale to your customers.

The Items form is available in Purchase Orders only if you do not use Sage ERP Accpac Inventory Control. If you use Inventory Control, you set up items in that program.

Note that you must set up account sets before you can add item records to Purchase Orders.

You record the following information for each item that you want to add to your inventory list:

- The number you use to identify the item. Item numbers can be up to 24 characters, and can contain blanks and special characters.
- A description of the item.
- The account set the item uses. (You assign an account set to define the general ledger balance-sheet accounts for the item.)
- (Optional) A commodity number if your company reports a value-added tax (VAT).
- The unit weight (the weight of one stocking unit of the item). The weight must be in the same weight units (such as pounds) that you specified in the Options form.
- The name of the unit of measure and the conversion factor associated with one stocking unit of the item. (For example, if the unit of measure is "dozen," you type 12.)
- (Optional) Tax information used to calculate tax amounts, including the taxing authority and tax classes for purchases and sales of the item.
- Up to 300 characters of additional item information.

For step-by-step instructions on using the Items form to add, edit, or delete an item record, see Items form.

You can import item records into Purchase Orders from non-Sage ERP
Accpac programs, instead of entering them in the Items form. For information about importing item records, see Importing and Exporting Setup Records.

Return to Setting up Purchase Orders without Inventory Control.
Setting Up Vendor Details

The Vendor Details form is available in Purchase Orders only if you do not use Sage ERP Accpac Inventory Control. If you use Inventory Control, you set up vendor details in that program.

You use the Vendor Details form to link each item record to up to nine vendors. You also use this form to record details about each vendor and the costs for the item.

When a vendor is linked to an item record, you can select the vendor's item number as you enter item details on requisitions and purchase orders. Purchase Orders fills in the cost of the item for you, and prints the vendor's item number, rather than your company's item number, on the purchase order.

You normally assign vendors to an item record in order of priority. For example, if you buy the same item from more than one vendor, you would assign Vendor 1 to the vendor you use most often.

Note that before you can add vendor detail records, you need to add item records in Purchase Orders and add the vendor records in Accounts Payable.

For step-by-step instructions on using the Vendor Details form to add, edit, or delete a vendor details record, see Vendor Details form.

Return to Setting up Purchase Orders without Inventory Control.
If you do not use the Inventory Control module, you set up weight units of measure using the Weight Units of Measure form, and you specify the default weight unit of measure in the P/O Options form.

Weight units of measure are the different units that you use for measuring item weights — such as pounds, tons, kilograms, and metric tons.

Weight units of measure are all defined in terms of a default weight unit of measure, which is the unit used to express total order weights in Purchase Orders.

For example, you could use the pound for the default weight unit of measure, and be able to convert the weight of items using metric measures.

<table>
<thead>
<tr>
<th>Weight UOM</th>
<th>Conversion Factor</th>
<th>1 pound equals</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pound</td>
<td>default UOM 1</td>
<td>Pound — 1 lb.</td>
</tr>
<tr>
<td>Kilogram</td>
<td>2.2</td>
<td>.4545 kg.</td>
</tr>
<tr>
<td>Ton</td>
<td>2,000</td>
<td>.0005 tons</td>
</tr>
</tbody>
</table>

**Default weight UOM**

The default weight unit of measure is the unit for expressing the weight of orders in Purchase Orders.

**Note the following points concerning weight units of measure:**

- The conversion factor for a default weight unit of measure is always 1.
- You can use fractions in weight conversion factors even if you do not use fractional inventory quantities.

For step-by-step instructions on using the Weight Unit of Measure form to add, edit, or delete a weight units of measure, see Weight Units of Measure form.

Return to Setting up Purchase Orders without Inventory Control.
Processing Multicurrency Transactions

You enter multicurrency transactions in Purchase Orders in the same way as functional-currency transactions. The only extra consideration arises if you need to change exchange rates or assign a different tax group to the transaction.

The currency for a transaction is displayed along with the current exchange rate when you enter a vendor number or select a tax group. (You can change the tax group for a document only to another tax group that also uses the vendor's currency.)

To change exchange-rate information, use the Rates tab (it appears only with multicurrency transactions for vendors who do not use the functional currency). You can change the rate type, rate date, and exchange rate for the document.

When you post multicurrency transactions, Purchase Orders converts the amounts to the functional currency, using the exchange rate information entered with the transaction.
See also

Using multicurrency accounting in Purchase Orders
Restricting Access to Purchase Orders Data

If you are the system administrator (the ADMIN user), you can turn on security for Sage ERP Accpac and restrict access to Purchase Orders data.

You use Database Setup to turn on security for the system database.
You use Administrative Services to grant security authorization to users. (First, you define security groups for Purchase Orders, selecting the tasks that members of each security group can perform. Then, you assign individual users to the security groups you defined).
Common Inquiry

With this security assignment users can:

- View all setup icons, including Options, Ship-Via Codes, Vendor Contract Costs, Templates, Additional Costs, E-mail Messages, Optional Fields, and G/L Integration.
- Print and preview setup reports, including Options, Ship-Via Codes, Vendor Contract Costs, Templates, Additional Costs, E-mail Messages, Optional Fields, and G/L Integration.

Also, in a stand-alone system, users can setup and access setup reports for Account Sets, Items, Vendor Details, and Weight Units of Measure.
## Account Sets Form Field List

The Finder lets you search the various lists of codes maintained in or used by Purchase Orders (such as vendor numbers, terms codes, and item numbers).

- Color options let you highlight a field using color for the text or for the background.
- The Search First option lets the user decide the starting point for the Finder: either to start in the Filter field or in the first line of the display.
- Searches can be done on any field, including number fields.
- The Field Name as Column Heading option lets users use field descriptions or internal field names as column headings.
- The Columns option displays all the processing fields.
- If the user does not have rights to view information, that information will not be displayed in the Finder.
- The Finder is active only in fields that display the Finder icon.

You can use Auto Search option in the Finder to locate a record quickly in a long list. Select the Auto Search option and the criteria by which you want to search, for example the letters in a customer name. Then, in the space provided, begin typing the characters that start or are contained in the field you are searching on, until the program displays the record you need.

Note that the records that appear with the Finder are restricted by any selection criteria you have applied to this field. If you cannot find the record you are looking for with the Finder or the navigation buttons, check the Finder to see whether any criteria are being used to limit the selection. If necessary, remove the selection criteria.

Press the F1 key when the Finder appears for more information about using the Finder.
Navigation Buttons ➡️ ← ⬅️ ⬆️ ⬇️

Click the buttons next to a field to display the first, previous, next, or last record, batch, or entry.

If you cannot find the record you want, check the Finder to whether any criteria are being used to limit the selection. (Choose the Finder, then click the Set Criteria button to see or change the current criteria.)
**New Button**

Click the New button to begin creating a new record.
Additional Costs Form Field List

- Additional Cost (code)
- Amount
- Currency ( multicurrency ledgers) 
- Description
- Expense Account
- Inactive
- Last Maintained
- Optional Fields
- Proration
- Return Account
- Return Proration
- Tax Authority Description (display only)
- Tax Authority
- Tax Class Description
- Tax Class
- Vendor Number
Setting Up Additional Cost Codes

You can use additional cost codes to identify the extra costs, such as for shipping and handling, that your vendors or carriers charge on the orders they send to you. When you enter the codes with receipts, invoices, credit notes, or debit notes, the corresponding information is displayed for you to accept or change, as needed.

You can also add additional costs to transactions without using additional cost codes.

To set up an additional cost code, you create a record that includes:

- A unique code of up to six characters to identify the cost.
- An optional description of the cost.
- The vendor number (optional).
- The amount of the cost (optional).
- The method by which you prorate the cost over items on a receipt.
- The general ledger expense account to which you post amounts for costs you expense (do not prorate).
- The method you use to reprorate additional costs that were prorated to items that you returned.
- The general ledger account to which you post cost amounts on returns when you expense the costs (that is, you do not prorate them).
- Optional field information if you added fields to the Additional Cost form.
- The tax authorities and purchase tax classes that apply to the cost, if any.
- If the cost is taxable, you specify all the tax authorities and purchase tax classes that apply to the cost, so that Purchase Orders can calculate correct tax amounts for you when you enter transactions for the cost. When you prorate taxable additional costs, the tax amount is added to the additional cost, then the total amount is prorated.
You select from the tax authorities and purchase tax classes you have set up for your company in the Tax Services forms in Common Services.

**Creating additional cost records.** Choose the Additional Costs icon from the Setup folder to create records for the additional costs in your Purchase Orders system.

For more information about how Purchase Orders handles additional costs, see [Entering additional costs on receipts](#).

Use this form to:

- Select the information to appear in the Entry Description, Detail Description, and Detail Reference and Comment fields in G/L transactions arising from invoices and shipments.
- Look up the last Day End Number for which you have created general ledger batches.

Click the field list button or one of the links below for more information on selecting G/L integration options.

Integration tab

Changing Settings

You can change any of your choices in the G/L Integration form at any time. However, you should be aware that any changes you make will apply only to general ledger transactions created after the change, and will not affect existing general ledger batches.

Before using the G/L Integration form

Before changing any of the settings or other information in the G/L Integration form, make sure you understand the impact the options have on processing within Purchase Orders.

Changing settings
You can readily change most of your choices in the Options form.

**Before changing settings** — Before changing any of the settings or other information in the Options form, make sure you understand the impact the options have on processing within Purchase Orders.

Before attempting to save changes to the Options form, make sure that no other users are using the data for the Purchase Orders company and that no other Purchase Orders forms are open for the company on your computer. You cannot save most changes if other Purchase Orders forms are open.

**Company name and address**

To change the contact name, telephone number and fax number for the Purchase Orders administration, use the Options form in the Setup folder.

Use the Company form in Common Services to change the company name and address, or to change the contact name, telephone number, and fax number at the company level.

**Multicurrency option**

You make your choice about the Multicurrency option in the Accounts Payable Options form, turning it on or not for Purchase Orders as well. Once you select the option in Accounts Payable, you cannot turn it off.

If you will be using the Multicurrency option in Purchase Orders, you also specify a default rate type to use when converting multicurrency Purchase Orders transactions to the functional currency.

**History and statistics**

You should change the type of year and period by which you keep statistics only at year end. If you change partway through a year, figures will be distorted in some periods and you will have to make corrections in all records for which you keep statistics.

**Note:** The Small Business Edition accumulates statistics by fiscal year
and fiscal period.

Items Form Field List

For help about the fields in the Items form, select from the keywords listed below:

**Item tab**
- Account Set Code
- Comment
- Commodity Number
- Description
- Inactive
- Item Number (code)
- Last Maintained
- Unit Weight

**Units tab**
- Unit Of Measure
- Conversion Factor

**Item Taxes tab**
- Purchase Tax Class
- (Tax) Authority
- Tax Class Description

**Optional Fields tab**

The Optional Fields tab contains optional fields added by your company to the Items form. These fields will appear by default on transaction forms as long as the transaction forms contain the same optional fields.

This tab will appear only if you have Sage ERP Accpac's Transaction Analysis and Optional Field Creator.
Items Form — Items Tab

Use this tab to:

- Enter identifying information about the item, such as the item number and description, the account set code to be used for the item in transactions, the commodity number (if you are required to report VAT amounts), the unit weight for the item, as well as additional description item information that you can print on customized forms.

Click these buttons for help on using them:

- Required
- Value Set
Optional Field Settings

Optional Field settings let you restrict the amount of information that is passed to Accounts Payable and General Ledger when you post transactions in Purchase Orders that use optional fields.

When defining an optional field for use with transactions, click the Settings button (or double-click the line on the Optional Fields grid). A separate form opens, listing the groups of accounts in other ledgers that are affected when you post transactions of the type for which you are defining the optional field.

Select whether you want to pass optional field information to Accounts Payable with invoices, credit notes and debit notes, and select the account groups for which you want to pass values to General Ledger when you post transactions that include the optional field.

Note:

- You must also use the same optional fields in Accounts Payable Invoices to pass information to Accounts Payable, and use the same optional fields in General Ledger accounts to pass information to General Ledger.

- Although all account groups are initially selected for new optional fields, you need to consider carefully the purpose of the optional field you are defining. You should send values to General Ledger only for optional fields that require financial analysis, and only to accounts where they are required. For example, you might want to send optional fields that contain vendor numbers only to revenue accounts.

  If you send all the optional fields you use in Purchase Orders transactions to General Ledger, your G/L may become unwieldy, and you may slow down processing considerably.

If you use Sage ERP Accpac Project and Job Costing, you can also specify whether optional field information for job-related transactions will be passed to Project and Job Costing, if the optional fields match those used for billings.
Selecting Processing Options

Use the Processing tab of the Options form to record whether your Purchase Orders system:

- Permits entry of transactions using item numbers that are not included in Inventory Control (Allow Non-inventory Items option). See [Allowing entry of non-inventory item numbers](#).

- Saves transaction history (all details of posted transactions) to a file for reporting (Keep Transaction History option). See [Accumulating purchasing history and statistics for reporting](#).

- Keeps a list of all the vendors from whom you purchase individual items (Accumulate Purchase History option). See [Accumulating purchasing history and statistics for reporting](#).

- Saves statistical totals from posted transactions (Accumulate Statistics option). See [Accumulating purchasing history and statistics for reporting](#).

- Requires requisition approval before they can be added to purchase orders. See [Requiring approval for requisitions](#).

This tab also lets you:

- Enter a code that sets the default information to appear in fields you enter on a purchase order or requisition (Default Template Code). See [Assigning a default template code](#).

- Select the costing method by which to display default item costs on transaction detail lines (Default Item Cost), if you use Inventory Control. See [Assigning a default item cost](#). (If you do not use Inventory Control, the default item cost is set to Vendor Cost.)

- Set the following options for items, if you do not use Inventory Control:
  - Choose whether to process transactions that use fractional quantities of items.
  - Set the weight unit of measure that Purchase Orders will use to allocate additional charges to items by weight. If necessary, you can change the weight unit of measure after setting up your system. However, if you have entered any weights in item records, you will
need to change them so they correspond to the new unit of measure.

- Set the default aging periods by which the program groups outstanding orders on reports. See Defining aging periods.

You also use the Processing tab to check the functional currency for the ledger and the choice for the Multicurrency option. In multicurrency systems, you can specify a default rate type. See Specifying currency information.

- Steps for Setting Up Purchase Orders
Selecting Document Numbering Options

Purchase Orders can automatically assign document numbers to each purchase order, requisition, receipt, and return document you add, or you can type your own document numbers as you enter the transactions. (When entering invoices, credit notes, and debit notes, you use the document numbers assigned by your vendors.)

To automatically assign the consecutive, unique document numbers you need to requisitions, purchase orders, receipts, and returns, specify the numbers to use on the Document tab of the P/O Options form. You can probably continue using the numbering scheme from your old purchase order system.

When you first activate your Purchase Orders system, the program provides default document number lengths, prefixes, and numbers.

You can change all of the default information, setting a different length, prefix, and next number for each type of document.

For more information, choose from the following topics:

- Changing the next document number
- Entering your own document numbers with transactions
- Number of characters in document numbers
- Reusing document numbers
- Using default document numbers
- Using Purchase Orders document numbers in Inventory Control and Accounts Payable

Options Form — Documents Tab

This tab lets you:

- Set the default aging periods for the Aged Purchase Orders report.
- Assign or change the maximum length (number of characters) to use in the document numbers Purchase Orders assigns to purchase orders, requisitions, receipts, and returns.
- Specify an optional prefix and the next number to assign for each type of document (if you allow Purchase Orders to assign document numbers automatically, rather than type them in yourself).

Purchase Orders uses the purchase order numbers you specify to assign numbers to purchase orders you create automatically from requisitions, Inventory Control reorder information, and Order Entry sales orders.

For information about another tab on the Options form, choose the corresponding link:

Company | Processing | Costing

Changing options

At any time, you can change your choices for all document-numbering options. To keep the document numbers unique, however, be careful not to change to a prefix or next number that will create duplicate numbers for a particular type of document. You cannot post requisitions, purchase orders, receipts, or returns with duplicate document numbers.

Vendor Contract Costs
Weight Units of Measure
The costing tab appears only if you are not using the Inventory Control module.

This tab lets you:

- Specify when the Purchase Orders module should cost inventory — either each time you post a transaction or only when you run Day End Processing.
- Specify when it should create sub-ledger and audit information.

Note: These settings have a large impact on how Sage ERP Accpac handles transactions. They apply to all transactions created in Purchase Orders.

*If you cost inventory during posting*, purchase order posting will take longer.

*If you create sub-ledger batches during posting*, you may also create and post A/P invoice batches at the same time that you post purchase order invoices.

For information on other processing options, see selecting processing options.

**Changing costing options**

After setup, you can change your costing options, with the following exceptions and restrictions:

- You can switch from costing during posting to costing during day end processing at any time.
  
  However, you must run Day End Processing before switching to costing during posting to make sure that you complete item costing and to make sure that all G/L transactions have been created properly.

Using Templates

Purchase Orders templates let you speed up and simplify transaction entry by providing default settings which appear when you start a new transaction.

You can specify the following information for each template that you define:

- Purchase order type
- FOB point
- On hold
- Ship-to and bill-to locations (if you use Inventory Control)
- Description
- Reference
- Comment
- Ship-via code
- Tax group
- Terms

You must specify the purchase order type and tax group in a template; the other information is optional. Note that the information in a number of the template fields can also come from other records. For example, the On Hold, Terms, and Tax Group fields are also in the vendor records.

**Default templates.** You can specify a default template in the Options form to have a standard set of default vendor and purchase order settings appear for each new transaction you create.

**Changing templates and vendors.** The default template provides initial settings, but these are overridden by settings from the vendor record — and from another template if you choose another one after selecting the vendor.

**Vendor tax group and terms.** Templates override a vendor's tax group and terms. When you select a new template code, the vendor's tax group and terms will be changed consistent with the new template code.
Setting Up Templates

A template is a set of default information for transaction headers (the information that applies to all transaction details such as transaction date, vendor, FOB point, description, and reference).

You use templates to automatically fill in fields in the Requisition Entry, Purchase Order Entry, Receipt Entry, Invoice Entry, Return Entry, and Credit/Debit Note Entry forms with the information and selections you use most often, so you do not have to retype standard information every time you add a transaction.

Templates are optional. You can enter transactions without using templates.

If you want to use templates, use the Templates form, selected from the Setup folder, to define them. For example, you may want to set up a template for the vendor from whom you most frequently purchase items, or for the types of purchase orders you enter.

For each template, you assign a unique code of up to six characters and a description to identify the template.

You must specify the purchase order type (Active, Standing, Future, Blanket) and the tax group for each template. You can also select codes for the shipping and billing locations (if you use Inventory Control), shipping method, and payment terms you want to use. You can type an FOB point, 60-character description, 60-character reference, and comment of up to 250 characters.

After setting up your templates, you can specify a default template code in the Options form. This template then provides the initial settings for every transaction you enter.

You can change the default settings in a transaction by entering a vendor number that uses a different tax group or terms code from the default template, or by selecting another template code that uses different settings. You can also change any of the individual settings provided by a template.

**Multicurrency ledgers.** In multicurrency systems, you can change a transaction's template only to another template with a tax group that uses
the vendor's currency.

For information about using templates during transaction entry, see Using templates.

Adding Vendor Contract Costs

1. Double-click the Vendor Contract Costs icon in the P/O Setup folder to open the P/O Vendor Contract Costs form.

2. Click the New button to start adding vendor contract costs.

   If reviewing costs, choose whether to view costs for an item number or a vendor.

3. On the form which appears, enter the vendor number for whom you want to set up contract costs or select it using the Finder.

4. The Contract Costs form is similar to the I/C Item Pricing form in the Inventory Control module. It lets you specify basic and sale costs for single or multiple units of measure, and specify percentage or flat amount discounts based purchase volumes.

5. Select the first item number for which you want to enter costs.

6. Fill in the cost, discount, and tax information for the item.

7. Click the Add button to add the contract cost information.
Editing Vendor Contract Costs

1. Double-click the Vendor Contract Costs icon in the P/O Setup folder.
2. Choose to edit costs by vendor number or item number.
3. Enter or select the number of the vendor or item that you want to edit.
4. Double-click the line containing the costs that you want to edit.
5. Press F1 again for help on editing item cost details when the Vendor Contract Costs form appears.

The changes you make have no effect on current transactions. You will see the changes the next time you select the item in a new transaction.
Deleting Vendor Contract Costs

1. Double-click the Vendor Contract Costs icon in the P/O Setup folder.
2. Choose to delete costs by vendor number or item number.
3. Enter or select the number of the vendor or item that you want to edit.
4. Click (select) the line containing the costs that you want to delete.
   Double-click the line to review cost details before deleting.
5. Click the Delete button. Click Yes if you are asked for confirmation.

Deleting contract costs has no effect on current transactions. You will see the P/O default costs the next time you select the item in a new purchase order.
Printing Vendor Contract Costs

Choose Print from the File menu in the Vendor Contract Costs form to print a list of your vendor detail records. You can also choose Vendor Contract Costs from the Setup Reports folder.
Setting Up Vendor Contract Costs

The Vendor Contract Costs form lets you set up contract pricing that you have arranged with specific vendors.

Vendor Contract costs appear by default when you add purchase orders, receipts, invoices, returns, and credit/debit notes. If no contract cost exists for an item and vendor, Purchase Orders displays the Default Item Cost specified in the P/O Options form.

You can also view all vendors’ contract costs in the item Finder for the Unit Cost field in the Purchase Order, Receipt, Invoice, Return, and Credit/Debit Note Entries forms.

Note: Vendor Contract Costs are not available in Sage ERP Accpac 100.

To set up vendor contract pricing:

1. Double-click the Vendor Contract Costs icon in the P/O Setup folder to open the P/O Vendor Contract Costs form.

2. Click the New button to start adding vendor contract costs.
   If reviewing costs, choose whether to view costs for an item number or a vendor.

3. On the form which appears, enter the vendor number for whom you want to set up contract costs or select it using the Finder.
   The Contract Costs form is similar to the I/C Item Pricing form in the Inventory Control module. It lets you specify basic and sale costs for single or multiple units of measure, and specify percentage or flat amount discounts based purchase volumes.

4. Select the first item number for which you want to enter costs.

5. Fill in the cost, discount, and tax information for the item.

6. Click the Add button to add the contract cost information.

Click the Field List button at the top of this topic for information about fields on the form:

Optional Fields Report — Features

You print the Optional Fields report whenever you need a listing of all the optional fields set up for Purchase Orders.

For each type of optional field, the report shows the optional field codes, descriptions, default values, and whether an optional field is set for automatic insertion in new records.

If you need instructions on printing the report, see Optional Fields Report — Printing.
Purchase Orders Menu Commands

The menu bar appears in all Purchase Orders forms immediately below the form title, but the menu titles and commands differ from one form to the next because each form displays only the menus and commands that apply to it.

For more information about menu commands, select one of the following menu titles:

- File menu
- Settings menu
- Help menu

See also

- Using Help
Welcome to Sage ERP Accpac online Help! Context-sensitive Help is available when you use Sage ERP Accpac on your desktop or from a Web browser.

### Obtaining Online Help

- For help on using Sage ERP Accpac:
  - Click Help Topics on the Help menu on the Sage ERP Accpac desktop, or
  - Press F1 in your browser from an open Sage ERP Accpac form.
- To view the Help contents for a specific module, open a form for the module, then click Contents on the Help menu.
- For form-specific help, display the form, and then press F1.
Go Button » or F7

Sage ERP Accpac uses the Go button where you must fill in a number of fields before the program can select a particular item.

For example, you may have to select a fiscal year and period before Purchase Orders can display the correct data. When you have made your selections, you click the Go button or press the F7 key on your keyboard.
Changing Column Order in Data Entry Forms

You can change the order in which columns appear on many Sage ERP Accpac forms.

For example, you can change the order of detail columns to match the field order of a document from which you are entering data.

To move a column

1. Point at the column heading.
2. Hold down the left mouse button.
3. Move the column to its new location.
4. Release the button.

The columns will be in the new order the next time you open the form.

To restore the original column order

• From the Sage ERP Accpac Desktop menu bar, select the icon for the form you changed, then click Object, Restore Defaults, then All Other Settings.

The next time you use the form, the columns will be arranged in the original order.

Changing Column Width in Data Entry Forms

Double-clicking on the division between columns resizes the column on the left to its minimum size based on the data it contains.

To change the width of columns

1. Position the mouse pointer on the vertical line separating a column heading from the next heading to the right.
2. Drag the column to the right (to make the column wider) or to the left (to make it narrower).
3. When you reach the width you want, release the mouse button.

To restore your original settings

• From the Sage ERP Accpac Desktop menu bar, select the icon for the form you changed, then click Object, Restore Defaults, then All Other Settings.

The next time you use the form, the columns will be arranged in the original order.

Purchase Orders reports
Use the Customize command in the File menu of an open form to hide fields for users assigned to a UI Profile ID for that form. When these fields are hidden, data that would normally appear in these fields cannot be printed.

For more information, see the UI Profile Maintenance topic in the System Manager help.
Import

Use this command to transfer (import) data from non-Sage ERP Accpac programs to Purchase Orders.

For example, you could use a spreadsheet program to enter current requisitions or purchase orders when setting up your Purchase Orders system, then import the transactions into Purchase Orders.
For step-by-step instructions on importing or exporting

Click Import on the File menu of a transaction-entry form or a setup record, then press the F1 key to display System Manager help that will guide you through the import process.

Entering Header and Vendor Information for Purchase Orders

The information in this topic is presented in the order in which you enter it on the Purchase Order Entry form (assuming that no one has changed the order of columns on the detail entry grid on the Order tab).

For each transaction, you enter the following:

- Purchase order number
- Vendor number
- Template code (optional).
- From requisition (number) (optional).
- On hold (optional)
- Job-related — if the purchase order is job-related, all items must be for particular contracts, projects and categories in Project and Job Costing. Posting the purchase order updates committed quantities and amounts for the jobs.
- Purchase order date
- FOB Point — the location at which the vendor begins charging freight (optional).
- Arrival date — the date on which you expect to receive the goods, and that you want to use as the default expected arrival date for item details (optional).
- Purchase order type (Active — purchase orders you intend to process immediately: Standing, Future, or Blanket).
- Original amount (blanket purchase order)
- Ship-via code — identifies the carrier or delivery method (optional).
- Ship-to location — the location to which you want the vendor to ship the order (optional).
- Bill-to location — the location to which you want the vendor to send the bills for the order (optional).
• Terms code — the code defined in Accounts Payable to identify the vendor's payment terms.
• Description — up to 60 characters (optional).
• Reference — up to 60 characters (optional).
• Comment — information or instructions for the vendor, up to 250 characters (optional — on the Totals tab).
• Vendor's address, phone and fax numbers, and the name of a contact person or position in the vendor's office (from the vendor record, but you can change information for the PO).
• **Tax group** — the code identifying the vendor's tax group. You can change it to another group that uses the same currency).
Adding Purchase Order Details

You enter the information for each item on a purchase order as a separate detail line. There are no restrictions on the number of detail lines you can add to a purchase order.

You do not enter additional costs (such as shipping and handling charges) on purchase orders. You add those amounts when entering receipts.

With each item detail, you specify:

- **Completed** — whether the ordered items have been received or canceled.
- **Item Number** — of the item being ordered.
- **Item description** — supplied for existing Inventory Control item numbers, or typed in for non-inventory items.
- **Contract, project, category** — for the job in Project and Job Costing if the purchase order is job-related. If you use different terms than "Contract," "Project," and "Category" in Project and Job Costing, the program displays them instead.
- **Location** to which the ordered goods will be delivered, if you use Inventory Control.
- **Drop-ship** the address where the vendor is to ship the items on the detail line (if it is not to the location specified for the line), such as to your customer's address (optional).
- **Quantity ordered** — the number of units ordered.
- **Unit of measure** — the unit of measure for the quantity being ordered.
- **Unit cost** — displayed from the item record; can be edited.
- **Extended cost** — the number of units times the unit cost.
- **Discount % or Discount Amount**.
- **Unit weight** — the weight of one unit of the item, in the unit of measure you specified for the detail (optional).
- **Extended weight** — the quantity ordered multiplied by the unit weight you entered for the detail.
• Vendor's item number — the code or number used by the vendor to identify the ordered item (optional).
• Expected arrival date — the date you expect to receive the item.
• Order number — a sales order number of up to 22 characters (optional).
• Comments and instructions — about the item or detail, up to 75 characters (optional).
• Quantity outstanding — the number of item units that have not yet been received or canceled.
• G/L expense account — the general ledger account to which you post the expense of non-inventory items.
• Non-stock clearing account — the general ledger account number you debit when you receive non-stock items and credit when you ship them.
• Manufacturer's Item Number — other numbers or codes that you use for your inventory items - such as bar codes or part numbers used by the manufacturer.
• Optional Fields - company-defined fields added to each of the detail lines in a purchase orders transaction. If the Optional Fields column appears, you can click the column heading to display the Optional Fields form.
Displayed information

Purchase Orders also displays the following information with each detail (you cannot enter or edit this information on the Order tab or on the Detail Items/Taxes form):

- The amount of tax that is included in the extended item cost. (Tax amounts are not displayed until you click the Calculate Taxes button or the Totals tab, or you post the purchase order.)
- The net cost of items with tax included in their prices (the tax base).
- Total allocated tax amount — the amount of tax that will be allocated to the cost of the item.
- The quantity of each detail that has been received (this number is updated when you post receipts for the detail).

To check or edit tax distributions for a detail line, select a detail, then click the Item/Tax button. For each tax authority, you can change the item's tax class and, if permitted by the authority, specify whether tax is included in the item cost.

For information about calculating and editing taxes, see Editing vendor and detail tax information.

When you add an item line, the program updates the purchase order subtotal displayed at the bottom of the form.

Entering Optional Fields Information

Purchase Orders supports Sage ERP Accpac Transaction Analysis and Optional Field Creator, a separately licensed package that lets you add optional fields to transaction documents and to each detail line of a transaction.

It also lets you pass optional field information through the complete transaction cycle - from purchase requisitions, to purchase orders, to receipts, to invoices, and even to downstream ledgers like Accounts Payable and General Ledger.

Optional fields provide exceptional flexibility by letting you customize your Purchase Orders system as much as you wish. You can use an unlimited number of optional fields to store more information with purchase orders transactions (such as requisitions, purchase orders, receipts, and invoices).

Information can be transferred to A/P and G/L. When you create invoices or general ledger transactions in Purchase Orders, the program passes the optional field values used in the transactions to Accounts Payable and to General Ledger if the optional fields in Purchase Orders are the same as the optional fields assigned in those programs. Optional field information will even appear in the General Ledger journal entries for Purchase Orders accounts, as well as in the Transaction Details Optional Fields report.

And, if the optional fields that you assign to Purchase Orders documents match the optional fields used for Accounts Payable vendors and Inventory Control items, the information entered in those programs will appear by default on transactions that you add in Purchase Orders.

Generated transactions also use optional fields. Purchase orders that are generated from requisitions, from low stock levels in Inventory Control, and from backorders in Order Entry will also include optional
fields.

If you use the same optional fields for invoices, credit notes, and debit notes as you use in the Accounts Payable Invoice Entry form, the optional entries are transferred to Accounts Payable with Purchase Orders transactions.

**See also**

[Selecting optional fields](#)
Enter Exchange Rates

If you use multicurrency accounting, you can enter exchange rate information for vendors who do not use the functional currency or are not EMU member-currencies.

When you select a vendor who does not use the functional currency (or if the exchange is between an EMU member and a non-EMU member), a Rates tab appears in the transaction form. This tab displays the vendor's default rate type, the rate date that corresponds to the document date, and the exchange rate for the rate date. You can enter different information for each transaction.

If you are entering a transaction with retainage, you specify on the Retainage tab whether the retainage invoice uses the same exchange rate as the original document or the current rate.
Adding Requisitions

Use the Requisition Entry form to create or edit requisitions. You fill in the following information:

- The requisition number, including up to 22 characters. You can also let Purchase Orders assign the requisition number, using the prefix, length, and next number you specified for requisitions in the Options form.

- An optional vendor number. If you specify a vendor number, it becomes the default vendor number for each new detail line you add to the requisition, but you can select a different vendor number for each detail or use a blank vendor number. You can also enter new vendor numbers and add them to the Vendors form in Accounts Payable while entering requisitions in Purchase Orders.

- Requisition date.

- An optional expiration date on which the requisition will be cleared by Day End Processing, whether completed or not. (Leave the date blank if you do not want the requisition to be cleared.)

- Whether the requisition is on hold

  If you use requisition approval, the requisition is automatically placed on hold unless it is posted by a user with approval security permissions. You cannot convert an on-hold requisition to a purchase order.

- Whether the requisition is job-related.

  You can allocate items directly to jobs if you have Project and Job Costing, and assign them to jobs rather than receive them into inventory.

  You cannot mix job-related and non-job-related items on a requisition. Also, you cannot add serialized items or items assigned to lots to job-related transactions. Instead, you must order them as non-job-related items, receive them into inventory, and then use the Material Usage form in Project and Job Costing to move them from inventory to jobs.
• Requested by, the person or department requesting the purchase (optional).
• The approval status and the approver's name.
• Date required, the date by which you need to be able to issue the purchase order (optional).
• Inventory location (optional). This field appears only if you use Inventory Control.
• A description and reference for the requisition (optional).
• Details of the items being requisitioned, including:
  o Item number and description
  o Contract, project, category (for a job-related requisition)
  o Vendor number and name (optional)
  o Location (from Inventory Control). Note that this field is available only if you use Inventory Control.
  o Drop-ship address (optional)
  o Quantity ordered
  o Unit of measure (from Inventory Control item record)
  o Unit cost and extended cost
  o Whether you want to copy costs on the requisition to the purchase order
  o Weight UOM, unit weight and extended weight
  o Vendor's item number (optional)
  o Expected arrival date (optional)
  o Order number (optional)
  o Comments and instructions (optional)
  o Manufacturer's item number (automatically added if you entered it in the item number field)
  o Optional fields that have been assigned to requisition transaction detail lines. For example, you might want to use an optional field to
enter a requester code for each detail line in the requisition.

- Optional fields that have been assigned to the requisition as a whole (on the Optional Fields tab) such as an authorization code.

- Requisition comments and totals.

You do not enter tax information on requisitions.

Requiring Approval for Requisitions
Set Up Manual Requisition Approval
Processing requisitions
Completing Requisitions

A requisition is completed when all its detail lines have a Completed status (Yes appears in the Completed column or field).

You complete requisitions by:

- Posting purchase orders for all the requisitioned items.
- Canceling outstanding requisition details.
- Specifying an expiration date, then automatically clearing the requisition during Day End processing.

When you post a purchase order for a requisition detail line, the line is automatically completed, whether you ordered the full quantity or not. Once a detail line is completed, you cannot change it, even if you want to order the remaining quantity. However, you can still create purchase orders for quantities that remained unordered when the requisition detail was completed.

When you post a purchase order for all the outstanding details on a requisition, the requisition is completed. You cannot make further changes to the completed details, but you can add details to a completed requisition, making it active again.

If you do not keep history, completed requisitions are deleted from your Purchase Orders system the next time you run Day End processing. You can also delete completed requisitions by displaying the requisition in the Requisition Entry form, then choosing the Delete button.
Deleting Requisitions

You can delete requisitions or requisition details at any time, even if a purchase order has been posted for the requisition or line.
Editing Requisitions

As long as a requisition exists in your Purchase Orders system, you can edit it and issue purchase orders from it. You can add new detail lines and make other changes to requisitions, whether a purchase order has been posted to the requisition or not.

Even if a requisition is complete, you can edit it and issue purchase orders from it. You can add new detail lines, delete others, and make changes to incomplete lines.
Using Security with Requisitions

You can use security (passwords) with the Requisition Entry form, separately specifying the persons who can add, edit, and delete requisitions; print requisitions; and import and export requisitions.

For more information about using security, see Purchase Orders security.

See also

- Requisition Entry security
- Requisition printing security
Future Purchase Orders

Future purchase orders are purchase orders you enter with a future date on which you expect to activate and issue the purchase order.

Day End Processing automatically activates future purchase orders on the purchase-order date (or the first time you run Day End processing after the purchase-order date). Alternatively, you can change the status of a future purchase order to Active before the purchase-order date, or change the activation date.

Day End Processing posts newly activated future purchase orders so that purchasing statistics are updated and items are placed on purchase order in Inventory Control.

**Tip:** If you usually run Day End Processing at the end of the work day, future purchase orders set to be activated on a certain day will not become active until the end of the day. To be sure a future purchase order is ready to be processed on the correct date, assign a date earlier than the desired date.
Blanket Purchase Orders

You can set up purchase orders for a certain monetary amount, then order items from them until you use up all available funds.

**When to use blanket purchase orders.** You might use blanket purchase orders when you want to make a number of purchases over time, but want to avoid having to post a new requisition and purchase order for each purchase. For example, you might use a blanket purchase order to periodically replenish office supplies.

Blanket purchase orders are not normally used to buy inventory items. If you plan to buy a lot of inventory over time, you should process it through a large active purchase order, with all the details, rather than by using a blanket purchase order.

**Setting up and using blanket purchase orders.** When you set up a blanket purchase order, you specify the total amount (cost) of items that can be purchased. With each new purchase, you add detail lines to the blanket purchase order.

You can change the total amount allowed for a blanket purchase order at any time. If you wish, you can assign security to the Original Amount field on the Order tab, so that only authorized persons can change the amount.

When you post new details, the amount still available is calculated and displayed.

When the available amount reaches zero, the blanket purchase order is completed and you cannot use it to make any further purchases.

**Posting additional costs for blanket purchase orders.** Because you do not enter additional costs on purchase orders, and you can change costs on receipts without updating the purchase order, you may post a receipt total that exceeds the available amount on the blanket purchase order. Although Purchase Orders lets you post this type of receipt, your procedures may not permit you to exceed the amount specified on the blanket purchase order.
Standing Purchase Orders

You can create standing purchase orders that contain items you often order together, then create active purchase orders from the standing purchase orders.

Placing active purchase orders from standing purchase orders

To create an active purchase order from a standing purchase order, you call up the standing purchase order and change the type to Active (you can also select Future or Blanket to create other types of purchase orders), make the changes you need, then post the new order with a new purchase order number you typed or a number assigned automatically by the program.

When you post a purchase order you created from a standing purchase order, the standing purchase order is retained in the system, unchanged and with its original number, regardless of how many purchase orders you issue from it.

Editing standing purchase orders

To change the contents of a standing purchase order, you display the purchase order, make the changes you need, then post them. You can change everything about an existing standing purchase order except its number and type. If you change the purchase order number or type, the program assumes you are creating a new purchase order.
Purchase Order Type

Select Active, Standing, Future, or Blanket. The type of purchase order you select determines how the purchase order is processed.

You can select:

Active — purchase orders you intend to process immediately.

Standing — orders that contain items you often order together. You can issue active purchase orders from standing purchase orders, as frequently as needed.

Future — purchase orders you enter with a future date on which you expect to activate and issue the purchase order.

Blanket — purchase orders for a certain monetary amount, from which you issue active purchase orders until you have used up all the available funds.
Checking Purchase Order Totals

- Use the Taxes tab on the Purchase Order Entry form to check taxes for the order, to change the vendor's tax group or the tax classes for the order, or to edit tax amounts.

- Use the Totals tab to:
  - Check the estimated weight of the shipment.
  - Edit tax information, check the number of detail lines (to be sure you entered all the lines you need), and look up the purchase order subtotal, excluded-tax total, and grand total.
  - Enter a comment for the purchase order.
  - Enter a discount percentage or a total discount amount for the purchase order. When you enter a discount on this tab, the program distributes the total amount to the purchase order details, overwriting any discounts you entered for details.

If you wish to print mailing labels for a purchase order, you enter the number of labels to print on the Totals tab, then use the Mailing Labels form to print the labels. The number of labels you enter specifies how many labels will be printed for the order when you select the Print Only Labels Marked As Required option in the Mailing Labels form.
Day-End Processing of Purchase Orders

**Note:** If you cost inventory during posting instead of during Day End Processing, almost all Day End processing tasks will also take place when you post transactions.

- If you are concerned with transaction processing speed, you should cost inventory transactions during Day End Processing—*not during posting*. (You change this setting on the Processing tab of the I/C Options form if you are using the Inventory Control module.)

Day End Processing (or posting, if you cost inventory during posting):

- Creates active purchase orders from future purchase orders that have reached their activation dates.
- Updates quantities on purchase order in Inventory Control (that can also be viewed in Order Entry).
- Updates committed quantities in Project and Job Costing for job-related purchase orders.
- If you keep history and statistics, updates purchase order history and updates the number of purchase orders for the year and period in the Purchase Statistics form and on the Purchase Statistics report.
- If you do not keep transaction history, deletes completed purchase orders. (Posting will delete the purchase orders if you cost items during posting).

If you use Sage ERP Accpac Inventory Control with Purchase Orders, you choose the Day End Processing icon from the Periodic Processing folder in Inventory Control.

If you use Purchase Orders as a stand-alone program (without Inventory Control), you choose the Day End Processing icon from the Periodic Processing folder in Purchase Orders.
Deleting Purchase Orders

You can delete purchase orders and individual details at any time until you post a receipt to the purchase order. After posting receipts to purchase orders, you cannot delete the purchase orders or any of their details. To cancel a purchase order detail after posting a receipt, you cancel the outstanding quantity.

To remove a completed purchase order from your system, you run Day End Processing if you do not keep history. If you keep transaction history, you remove completed purchase orders by using the Clear History form.
Editing Purchase Orders

You can change information on any incomplete active or blanket purchase order, and on all future and standing purchase orders. You can even delete a posted purchase order until you post receipts against it.

Multicurrency ledgers. If you use multicurrency accounting, you can change the tax group on a transaction until you add details, but only to another tax group that uses the vendor's currency.

What you can change after posting. After you post a purchase order, you can change everything you entered on the order except the purchase order number, vendor number, and completed detail lines.

You can add detail lines to a purchase order at any time, even after posting receipts for all the purchase order details and completing all detail lines. You can delete detail lines for which you have not received any items, and you can change the outstanding amounts of partially received details.

If you change quantities or delete purchase order details, quantities on purchase order are updated in Inventory Control.
Posting Purchase Orders

When you post a purchase order, item quantities on purchase order are increased in Inventory Control.

If the purchase order is job-related, Purchase Orders also update the committed quantities and costs for the job in Project and Job Costing.

If you use the automatic-numbering option, posting assigns and displays the purchase order number. Posting also updates the information for the Purchase Order List, so that you can print an accurate list immediately. After posting, you can also print copies of the purchase order.

Posting completes purchase order lines that you set to Completed. You cannot edit these lines after posting.

**Effect on requisitions.** If you specified requisition numbers for the purchase order, the requisition detail lines you add to the purchase order are completed on the requisitions when you post the purchase order.

If a purchase order completes all the details on any specified requisition, the requisition itself is completed when the purchase order is posted.
Printing Purchase Orders

To print purchase orders, choose the Purchase Orders icon from the Forms folder. You can also print a single purchase order from the Purchase Order Entry form, right after posting it. You can reprint purchase orders until they are complete.

If you wish, you can print purchase orders by type (Active, Future, Standing, Blanket), and you can choose to reprint or exclude previously printed purchase orders, or print only incomplete purchase orders. You can also print copies of edited purchase orders, including only the details added since the last time you printed a purchase order.

You can print purchase orders using the forms that come with the program, or you can change the forms. For instructions on creating your own forms or adapting the sample purchase order forms, see the online form, "Customizing Printed Forms with Crystal reports."

Printing drop-ship addresses. If the purchase order includes drop-ship addresses, all details with the same drop-ship address are printed together on the purchase order, followed by the address, rather than printing an address with each detail line that uses it.

E-mailing purchase orders. The Purchase Orders program also lets you email purchase orders and purchase returns to vendors.

If you want to email purchase orders to vendors, you use the Email Messages form in the P/O Setup folder to create the email message that you want to send to vendors.

For each vendor that you want to email, you must set the Delivery Method to Email or to Contact's Email on the Processing tab of the vendor record in Accounts Payable.
Using Security with Purchase Orders

You can use security with the Purchase Order Entry form, separately specifying the persons who can:

- Add, edit, post, or delete, requisitions, purchase orders, receipts, returns, invoices, and credit or debit notes.
- Create purchase orders automatically from requisitions, Inventory Control, and Order Entry.
- Approve purchase requisitions.
- View cost information.
- Edit invoiced quantities or costs.
- Print requisitions, purchase orders, receiving slips, returns, or mailing labels.
- Edit setup information and options.
- Import or export purchase orders.

On blanket purchase orders, you can also assign security to the Original Amount field on the Order tab of the Purchase Order Entry form (see Edit blanket PO amount security access). By restricting access to this field, you can ensure that no unauthorized changes are made to the amount.

You can assign security to item costs in Inventory Control if you do not want to display the item costs from Inventory Control on purchase order detail lines. The Unit Cost and Extended Cost fields will then display only zeroes in Purchase Orders, and you then type in cost amounts when entering transactions.

For more information about using security, see Purchase Orders security.

Purchase Order Entry security access
Purchase Order Printing security access
Purchase Orders security
Calculating Prorated Additional Costs

You can prorate additional costs to items on a receipt either automatically or manually. For documents created in version 5.3A and earlier multicurrency ledgers, you can manually prorate costs only if they are in functional currency.

If you prorate automatically, the extra cost amounts do not appear as part of the item detail costs in the Receipt Entry form, although they are reported on the posting journal for each transaction.

If you prorate manually, you click the Distribute Proration zoom button, and enter the prorated cost amounts in the Distribute Proration form.
Prorating automatically

Additional costs you choose to prorate automatically are apportioned across all items on a receipt during posting or Day End Processing, based on each detail's total quantity received, total weight, or extended cost, as a percentage of the receipt's total quantity, weight, or cost, respectively.

You can prorate by:

- Quantity
- Weight
- Cost
Entering Receipts

This topic describes the information you enter for receipts and receipt adjustments in the Receipt Entry form.

**Specifying vendors and purchase orders.** You can enter receipts for vendor numbers that exist in your Accounts Payable data and for new vendors, and you can add a vendor to Accounts Payable from the Receipt Entry form. You can also apply receipts to existing purchase orders or you can enter a receipt that doesn't reference a purchase order.

**Job-related receipts.** If the receipt is for a project you are managing with Project and Job Costing, different fields appear for the details to let you enter job-related information. If the retainage option is selected in Accounts Payable, you can choose retainage accounting for the receipt.

**Note:** If the receipt is being created from multiple purchase orders, all purchase orders must be either job-related or non-job-related.

**Specifying item and cost details.** You can enter individual item receipts and additional costs (such as shipping charges) as separate details, and you can edit tax information for each detail and cost, and for the vendor.

You can enter additional cost details for the primary vendor (the vendor from whom you received the goods) or for secondary vendors (vendors who charged costs on the shipment but did not supply the goods).

If necessary, you can assign a different vendor and tax group to each additional cost detail. In multicurrency ledgers, you enter all details in the primary vendor's currency.

During receipt entry, you can look up purchasing history by vendor or item number. You can also print receipts after posting them using the standard form for receiving slips supplied with Purchase Orders, or using forms you design.

**Note:** You must Allow Receipt of Non-Stock Items in Inventory Control in order to enter receipt transactions for non-stock items.

**Editing receipts.** You can use the Receipt Entry form to edit existing receipt details for a vendor if you have not posted an invoice for the vendor and receipt. A receipt is complete when you have posted invoices
for all vendors on the receipt. You cannot change a completed receipt.

**Invoicing receipts.** You can post invoices for receipts from the Receipt Entry form, invoicing the items received and additional costs charged by the primary vendor (the receipt vendor), as well as additional costs charged on receipts by other vendors (secondary vendors). You can also use the Invoice Entry form to post invoices.

**Enter 1099 codes and remit-to locations in Invoice Entry or Accounts Payable.** Note, however, that if you need to record 1099 codes and amounts or remit-to locations, you must enter invoices in the Invoice Entry form, or edit Purchase Orders invoices in Accounts Payable to add the codes and 1099 amounts.

If you also use Serialized Inventory, you can assign serial numbers to items after inserting an amount in the quantity field.

**See also**
- Processing receipts
- Units of Committed and Actual Quantities
Entering Receipt Header and Vendor Information

This topic discusses the header and vendor information you enter only with receipts.

Most of the information you enter with a receipt is the same as with requisitions and purchase orders, and is described under Processing purchase orders.

Information that you enter only for receipts includes:

- **Receipt number** (a unique number, up to 22 characters in length, to distinguish the transaction from other receipts for audit control purposes).
- **Vendor number** (the vendor from whom you purchased the goods).
- **PO number** (the number assigned to the single purchase order for which you are receiving items).
- **From multiple POs** (the numbers of all purchase orders you have chosen to receive from the vendor).
- **Job related** (if the receipt is for a project you are managing with Project and Job Costing).
- **Retainage accounting** (if the retainage option is selected in Accounts Payable, you can choose retainage accounting for the receipt).
- **Receipt date** (the transaction date for the receipt).
- **Year and period** (to which you want to post the general ledger transaction).

On new receipts, you can also enter:

- **Template code**
- **Bill-to location**
- **Ship-to location**
- **FOB point**
- **Ship via code**
- **Terms code**
- **Description**
- **Reference**
- **Comment** (on the Totals tab)

When you select a valid purchase order for a receipt, the Receipt Information tab displays the number of receipts that have been posted to the purchase
order and the last receipt number that was posted to the purchase order. Go back to Entering receipts
Entering Receipt Details

You can enter receipt details against existing purchase orders or enter receipts without referencing any purchase order.

When you are entering new receipts for an existing purchase order, the incomplete details from the purchase order are displayed. (Completed details are omitted.) You can edit and delete details but you cannot add details.

You can add as many details as you need on a receipt that does not include a purchase order number.

You can enter the following information with receipt details:

- Whether the receipt completes the purchase order detail (that is, the detail line has been fully received or canceled).

- Item number, description, and location (on receipts that do not reference a purchase order).

  If you use manufacturers' item numbers, you can enter them here. The program will substitute them for your item numbers, and insert the manufacturer's item numbers in the manufacturer's item number field.

  You can also receive items identified as non-stock items, if you allow them to be received in Inventory Control or if you use Purchase Orders as a stand-alone system.

  If you are editing a previously posted receipt or you specified a purchase order number for the receipt, you can change the description for each detail line, but you cannot change the item number or location.

- Contract, project, category, cost class, A/R item number, billing type, billing rate, and resource (if the receipt is job-related).

  If you use different terms than "Contract," "Project," and "Category" in Project and Job Costing, the program displays them instead.

  If the retainage option is selected in Accounts Payable, and you chose retainage accounting for the receipt, you also enter the
retainage amount and retention period for each detail item for which holdbacks apply.

- **Drop-ship address** (for any item details that were shipped to a different address from the inventory location specified for the detail).

- **Quantity received** (the number of units of each item that you received).

  **Note:** If you use Project and Job costing, use the same unit of measure that is on the estimate. (See [Units of Committed and Actual Quantities](#)).

- A discount amount or discount percentage. Note that if you enter a discount for the total receipt (on the Totals tab), any discounts you entered for details will be overwritten.

- **Manually prorated amount** (the total amount of all additional costs, including allocated taxes, that you wish to prorate manually to an item detail). You calculate the total amount to prorate to each detail, then type in the amount.

- **Unit of measure**, **unit cost**, extended cost, unit weight, and extended weight. If you specify a valid Inventory Control item number, this information is supplied from Inventory Control or calculated by Purchase Orders, but you can change it. If you use a non-inventory item number, you must enter the information yourself.

- **Quantity canceled** (the number of units, if any, that you do not expect to receive). You enter canceled quantities only on receipts that specify a purchase order number.

- **Quantity outstanding on purchase order** (the number of units not yet received or canceled; you can change the number when working with an existing receipt or purchase order).

  When you post the receipt, the outstanding quantities are updated on the purchase order. If you post a receipt for the full outstanding quantity or for a larger quantity than was specified on the purchase order, the purchase order detail is completed.

- **Vendor's item number** (displayed from the purchase order, if any, you specified for the receipt).

  You can enter the vendor's item number or change a displayed number. You can also omit the item number.
- **Number of labels** (the number of labels that you want to print in Inventory Control for the received items).

- **Arrival date** (the date on which the items were received).
  
  The program displays the session date, but you can edit it.

- **Order number** (the Order Entry sales order or other order number you enter).

- **Comments.**
  
  You can enter as many comments as you need with each receipt detail. If the receipt references an existing purchase order, the comments entered for the purchase order details are displayed on the receipt, and you can edit them.

- **G/L expense account** (for non-inventory items).

- **Discount % or Discount Amount** for each detail. When you enter a discount amount, the program calculates the discount percentage, and displays the result in this field. If you enter a percentage, the program calculates and displays the discount amount.

  Note that if you enter a discount for the receipt on the Totals tab, the program distributes the total discount amount to the details, overwriting any detail discounts you entered.

- **Optional fields** (for the item detail).

  These are company-defined fields that can be added to each of the detail lines in a receipt if you use Sage ERP Accpac's Transaction Analysis and Optional Field Creator. The entries in these fields will flow from the requisition and purchase order if you use the same fields for those forms. They can also be passed on to Accounts Payable invoices and General Ledger transactions.

  If the Optional Fields column appears, you can click the column heading to display the Optional Fields form.

  The quantity received to date for each detail is displayed on the receipt. This figure is updated on the purchase order when you post receipts to the detail.
Entering Additional Costs on Receipts

When entering a receipt, you can add additional costs charged on the shipment, such as handling charges, service charges, and duty. You can expense costs or prorate them to received items.

You can also edit additional-cost amounts on previously posted receipts that are not yet fully invoiced. If you return items, you can specify how to reallocate costs that were prorated to the returned items on the receipt.

You enter additional cost details by vendor on the Additional Costs tab of the Receipt Entry form. You can include additional costs charged by the primary vendor, and you can include costs charged by other vendors. If you wish, you can post an invoice for each vendor's costs from the Receipt Entry form or you can enter the invoices in Invoice Entry.

**Non-inventory items**

If you are adding additional costs for non-inventory items, you must choose No Proration. If you choose to prorate by quantity, cost, or weight, the program will display an error message and prevent you from posting the receipt.

**See also**

[Calculating prorated additional costs](#)
[Expensing job-related additional costs](#)
[Information entered with additional costs](#)
[Specifying vendors for additional costs](#)
Expensing Job-Related Additional Costs

If job-related additional costs are expensed rather than prorated, you can specify the contract, project, category, cost class, resource, billing type, billing rate (if appropriate), currency, A/R item number, and unit of measure for the additional cost.

Depending on the category, you may choose to calculate overhead or labor burden for the additional cost. Overhead and labor are calculated by Project and Job Costing and passed back to Purchase Orders when you post the receipt.

Expensed additional costs are assigned their own transaction numbers, because they are sent to Project and Job Costing as separate transactions.

**Note:** Once you post a receipt, you cannot change the billing type, billing currency, A/R item number, A/R unit of measure, overhead calculation, or labor calculation for additional costs.
Importing Receipts

Use the Import command on the File menu in the Receipt Entry form to transfer receipts created in non-Sage ERP Accpac applications (or in another Purchase Orders database at a different location) to Purchase Orders.

Purchase Orders posts imported receipts and returns as they are imported, but does not delete the original file of transactions. To avoid importing the same transactions twice, you should delete the file when you are finished.

You must make sure that the receipts and returns for importing use unique document numbers. You cannot import a transaction that uses a document number you have posted and not cleared in Purchase Orders. You can also import additional costs only for the primary vendor.
Multicurrency ledgers

You cannot import multicurrency transactions into a single-currency ledger. Edit import files to remove multicurrency fields before importing.
Guidelines for importing

If the file does not contain valid data, Purchase Orders will not import it. For an example of valid data, export receipts using the fields you plan to import later and use this as a guide.

Note that the import file you specify must be located on the drive and in the directory that you select. If you are on a network, you must have access rights to the import file and the directory.
For step-by-step instructions on importing receipts

Click Import on the File menu of the Receipt Entry form, then press the F1 key to display System Manager help that will guide you through the import process.
After importing

• Check data integrity.

• Run Day End Processing to create journal entries from the imported data.

• Print the posting journal for the type of transaction imported and use it to check the posted details and the general ledger distributions generated from Purchase Orders transactions.

• Unless you need to use it again, delete the file from which you imported the transactions.
Prorating Additional Costs on Receipts

You can choose from five proration methods for each additional cost:

- You can choose not to prorate the cost (No Proration), and expense it instead.

  **Non-inventory items.** If you are adding additional costs for non-inventory items, you must choose No Proration. If you choose to prorate by quantity, cost, or weight, the program will display an error message and prevent you from posting the receipt.

- You can prorate by:
  - Item cost.
  - Item quantity.
  - Item weight.

- You can choose to prorate the cost manually.

You cannot change the proration method after you post a receipt.

For examples and information about how costs are prorated, see Calculating prorated additional costs.

**Expensing additional costs.** If you do not prorate an additional cost, you expense it to the general ledger account you assigned to the additional cost record or to another account you specify when entering the additional cost transaction.

**Job-related proration.** If you want to apportion an additional cost to several jobs, you need to add a detail line for each job.

**Returns and adjustments.** You specify the reproration (return proration) method (how a cost is reprorated) when you enter a return to a receipt you posted previously or when you return items to which costs were prorated.

If you used an additional cost code, the program displays the reproration method specified in the cost record, but you can select another method for the detail. You cannot change the proration or reproration method after you post the receipt.
You can choose to leave the cost as originally prorated, reprorate it using the original proration method, or expense it to the general ledger account you specify, as follows:

- Select the **Prorate** option to have the program prorate the "returned" additional cost amount over the remaining goods on the receipt, using the original proration method.

- Select the **Leave** option if you do not want to reprorate the additional cost to the remaining goods on the receipt.

  You can also use the Adjustments form in Inventory Control to write off the additional cost to a general ledger write-off account, rather than add it to other item costs.

- Select the **Expense** option if you want the program to debit a general ledger expense account for the returned portion of the additional cost amount. Enter the general ledger account number to which the expensed amount is posted.
**Editing tax distributions**

The tax information for each additional cost detail is determined by the vendor's tax group. For each detail, you can change the tax class and specify whether tax is included in the cost amount (if allowed by the tax authority).

You can also check the tax amount for the detail and the allocated, recoverable, and expensed tax amounts. For more information, see [Editing vendor and detail tax information](#).
Reporting prorated amounts

The Receipts Posting Journal lists the additional cost amounts prorated to each item on a receipt. Use the journal to check the amounts that were prorated automatically during posting or Day End Processing, and to check the amounts you prorated manually.
Checking Receipt Totals

The Receipt Entry form contains separate totals for the primary vendor and for each secondary vendor (if any).

**Checking totals for the primary vendor.**

- Use the Taxes tab to view total tax amounts for each tax authority assigned to the primary vendor. Tax information includes the totals of included and excluded taxes. You can edit the total tax amount for each authority. The program then calculates the total included and excluded tax for each authority.

- Use the Totals tab to:
  - Check totals for the primary vendor. Information includes the total weight and number of details and additional cost details on the receipt, total of item details, and total of additional costs charged by the primary vendor. An additional cost total is shown on the Totals tab only for the primary vendor.
  - Enter a comment for the receipt.
  - Enter a discount percentage or a total discount amount for the receipt. When you enter a discount on this tab, the program distributes the total amount to the receipt details, overwriting any discounts you entered for details.

If you manually prorate additional costs, the Totals tab shows you whether you have fully allocated all additional costs and their associated taxes that you chose to prorate manually. The Totals tab also shows any discrepancy between the additional costs that were to be allocated manually and the amount you have actually prorated to details.

**Checking totals for the secondary vendor.**

- Use the Additional Cost Vendor Taxes form to view or to edit tax classes and tax amounts for the tax authorities assigned to the individual secondary vendors.

To display the Additional Cost Vendor Taxes form for a particular
vendor, select the additional cost vendor on the Additional Costs tab, then click the Vendor Taxes button.
Editing Receipts

After posting a receipt, you can no longer change the purchase order numbers, template code, or tax group, and you cannot delete any item or additional cost details that were posted with the receipt. You can add new additional cost details and, if the receipt does not reference a purchase order number, you can add item details. In multicurrency ledgers, you cannot edit exchange rates.

If you change receipt quantities, quantities on hand are updated with the changes in Inventory Control.

Job-related changes to receipt quantities will change the committed and actual quantities and costs in Project and Job Costing.

If you edit an existing receipt that was created from a purchase order, you see only the detail lines (from the purchase order) that have a received quantity or have a non-zero amount (other than the received quantity), such as a manual proration or a canceled quantity.

You cannot change the proration or reproration method you assign to any additional cost after you post the receipt. If you need to change the method, either on the receipt or for a return, you post the change as an adjustment in Inventory Control.

Editing receipts after invoicing

Once you have posted an invoice for the primary vendor, all the vendor's details are complete and you cannot edit them. When you have posted invoices for all the vendors on a receipt, the receipt is complete and can no longer be changed.
Posting Receipts

When you post a receipt in Purchase Orders, item quantities on purchase order are reduced and quantities on hand are increased in Inventory Control.

If the receipt is job-related, Purchase Orders also updates the actual and committed quantities and costs for the job in Project and Job Costing.

If you specified a purchase order number on a receipt, posting also enters or updates outstanding and received quantities on detail lines in the purchase order, and completes purchase order detail lines that have been fully received or canceled. Posting also deletes purchase order details for which no quantity was received on the receipt, so that they do not appear on the receipt if you select it for editing after you have posted it. You should make sure you have entered all the received quantities you want to include on a receipt before you post it.

After posting a receipt, you cannot change additional cost information (except for the amounts) and you cannot delete detail lines — although you can change the quantity received and cost amounts, and you can add additional costs for the primary vendor on the invoice. In multicurrency ledgers, you cannot edit exchange rates.
Day End Processing of Receipts

**Note:** Most day end processing tasks will be performed during posting if you choose the Inventory Control option to cost inventory items during posting.

When you run Day End processing to process a Purchase Orders receipt, Day End Processing:

- Inserts the item costs as the most recent costs in Inventory Control item records (unless you chose the option to cost items when you post transactions).

For items using LIFO or FIFO costing, posting or Day End Processing creates a new LIFO or FIFO bucket for the receipt, quantity, and cost. For receipt adjustments, Day End Processing updates the buckets created for the original receipt. If a bucket has been cleared, Day End Processing posts any receipt adjustments to the offset bucket.

If an item is processed at more than one cost, posting or Day End Processing uses the cost from the last detail processed for an item as the most recent cost in the item record, unless the receipt cost on the last detail is zero or a negative amount.

If the last item cost is zero, posting or Day End Processing uses the last non-zero cost processed for the item, or if no other details are processed for the item, does not change the most recent item cost.

- Prorates any additional costs posted with a receipt to the items on the receipt using the methods you specified.

- Creates the Receipts Posting Journal and general ledger transactions for the processed receipts.

The general ledger accounts affected by receipts are shown in *Journal entries generated by posted transactions*.

Day End Processing does not create general ledger entries for non-inventory item details and additional cost details that you expense rather than prorate, because these details are posted to general ledger expense accounts, rather than to Inventory Control accounts. Journal entries for non-inventory items and expensed additional costs
are created when the transactions are posted in Accounts Payable. If you adjust a receipt after running Day End Processing, journal entries are created for the amount of the adjustment, including additional costs, the next time you run day-end.

• Completes all receipt details for vendors with invoices posted to the receipt.
• Deletes completed receipts if you do not keep transaction history.
• Updates history and statistics in Purchase Orders and Inventory Control, if you keep history and statistics.

Posting Journals
Using Security with Receipts

You can use security with the Receipt Entry form, separately assigning the persons who can:

- Add, edit, and invoice receipts.
- View receipt costing information.
- Print receiving slips.
- Import receipts.
- Export receipts.

Purchase Orders provides a security permission to "Show Receipt Costing Information." This allows you to have warehouse staff receive goods and enter quantities received, but prevent them from viewing cost information.

If users do not have the "Show Receipt Costing Information" security right, they will not be able to view item unit cost information on receipts — including totals, taxes, discounts, and additional cost amounts. (In other words, the Taxes tab, Additional Costs tab, and Totals tab will not appear on the Receipt Entry form for users do not have this right.)

**Note:** Pre-printed forms PORCP03.RPT and PORCP04.RPT will print cost information. If you want to hide costs on these forms, you will need to customize them.

You can also assign security to item costs in Inventory Control if you do not want to display the item costs from Inventory Control on receipt detail lines. The Unit Cost and Extended Cost fields will then display only zeroes in Purchase Orders, although you can type in cost amounts when entering transactions.

Note that item cost security in I/C does not apply to any Vendor Contract Costs entered in Purchase Orders.

For more information about using security, see [Purchase Orders security](#).

Using Purchase Orders with Other Sage ERP Accpac Programs

You must install and activate Sage ERP Accpac Accounts Payable before you can activate Purchase Orders.

If you plan to use Purchase Orders with Inventory Control, rather than as a "stand-alone" program, you must install and activate Inventory Control before activating Purchase Orders.

If you do not install and activate Inventory Control first, the installation program sets up Purchase Orders as a "stand-alone" program; it will not integrate with Inventory Control.

You can also use Purchase Orders with Sage ERP Accpac General Ledger, Order Entry, and Accounts Receivable.

For information about how Purchase Orders works with other Sage ERP Accpac programs, choose from the following topics:

- Accounts Payable
- Accounts Receivable
- General Ledger
- Inventory Control
- Order Entry
Entering Invoices

Most of the information you enter with an invoice is the same as with receipts and purchase orders, and is described under Processing purchase orders.

To read about the information you enter only with invoices, click the following links:

- Entering invoice header information and vendor information
- Entering invoice details
- Entering additional cost details on invoices
- Entering optional data on invoices
- Entering exchange rate information on invoices
- Checking invoice totals
- Editing payment terms
- Entering units of committed and actual quantities
**Posting Invoices**

During posting, the total of all details and taxes is compared to the invoice total you entered on the Invoice Information tab. The invoice is posted only if the two totals are the same.

Posting assigns the invoice number you entered and completes the invoice and the receipt details for the selected vendor. You cannot change or delete an invoice after posting it, and you cannot change the receipt details for the vendor.

If you changed the quantity received on an invoice, the quantity on hand in Inventory Control is adjusted during posting. Otherwise, invoice posting in Purchase Orders has no effect on Inventory Control data.

Job-related invoices update Project and Job Costing quantities and costs only if the invoice differs from the posted receipt.

If you use the Keep Transaction History option, you can display posted invoices in the Invoice Entry form and print them on the Transaction List until you clear them from Purchase Orders. If you do not keep transaction history, posted invoices are deleted during posting or Day End Processing in Inventory Control (depending on when you cost inventory).
Day End Processing of Invoices

**Note:** If you cost inventory during posting instead of during Day End Processing, almost all Day End processing tasks will take place when you post transactions.

- If you are concerned with transaction processing speed, you should cost inventory transactions during Day End Processing—*not during posting*. (You change this setting on the Processing tab of the I/C Options form if you are using the Inventory Control module.)

Day End Processing (or posting, if you cost inventory during posting):

- Creates and optionally posts a batch of invoices in Sage ERP Accpac Accounts Payable, with a batch type of Imported. Information for each invoice includes the remit-to location and 1099 code and amount, if any.
- Updates costs in Inventory Control for non-job-related invoices, if you use Inventory Control.
- Updates quantities and costs in Project and Job Costing for job-related invoices.
- If you keep history and statistics, updates history and statistics with invoice data.
- Creates the Invoice Posting Journal that lists details of the invoice transactions and the corresponding general ledger distributions
  
  Note that the general ledger transactions for invoices are created in Accounts Payable when the invoice batch is posted in Accounts Payable.

- If you posted invoices with new prorated additional costs, Day End Processing prorates the costs to the items on the receipt, updates costs in Inventory Control, and creates adjusting entries for your general ledger.

You must run Day End Processing to:

- Delete invoices from Purchase Orders if you do not keep transaction history.
• Activate future purchase orders.

Purchase Orders general ledger transactions
Posting Journals
Using Security with Invoices

You can use security with the Invoice Entry form, separately specifying the persons who can add invoices, edit quantities, edit costs, and export invoices.

For more information about using security, see Purchase Orders security.

See also

- Invoice Entry security access
- Edit Invoiced Quantity security access
- Edit Invoiced Cost security access
Exporting Invoices

Use the Export command on the File menu in the Invoice Entry form to transfer invoice transactions created in Purchase Orders to non-Sage ERP Accpac applications.

Before exporting, decide which fields to include in the export file. You must select fields for each type of record used for the selected transaction type. You should also find out the path for the export file you want to use or create.

When you choose Export, Purchase Orders exports all the transactions of the selected type currently in the system. If you do not want to export everything, use the Set Criteria option to specify the documents to export.
Entering Header and Vendor Information on Returns

As with other Purchase Orders transactions, you can enter your own document numbers for returns or allow the program to assign them, using the length, prefix, and next number you specified for returns in the Options form. You can also enter non-existent vendor numbers and, if you wish, add them to Accounts Payable from the Return Entry form.

If you select a receipt number for a return, the vendor number is inserted for you, and default information from the receipt appears in the corresponding fields on the Return Information and Vendor Information tabs. You can change everything but the template code, purchase order number, and tax group.

If you do not select a receipt number for the return, you fill in the information you need on the Return Information and Vendor Information tabs. You can also select a template code to fill in some of the fields automatically.

Note that if you select a receipt number for a return, you cannot then erase the receipt number. If you specify a receipt number accidentally, cancel the transaction and start a new return, leaving the Receipt Number field blank.

**Multicurrency ledgers.** If you use multicurrency accounting, the currency for the document is determined by the vendor number and corresponding tax group. You can change the tax group for a vendor only to another group that uses the vendor's currency.
Entering Returns for Existing Receipts

When you return items from an existing receipt, Purchase Orders displays information from the original receipt in the Return Entry form. You can edit all the information on the Return tab except for the purchase order number (if any), vendor number, and template code.

You enter the returned quantity for each item in the detail entry grid on the Return tab. You can either delete the details that you are not returning, or leave the returned quantity at zero.

If you are returning all items from a receipt, you can use the Return All button to enter the full quantity received on each detail line. If necessary, you can change all of the returned quantities inserted by the Return All button.

**Detail information you can edit.** On each detail line, you can enter a return cost (the total cost of the returned items) and edit the item description, location (if you use Inventory Control), unit of measure, unit and return cost, unit and extended weight, vendor's item number, order number, comments, and optional fields. For non-inventory items, you can edit the general ledger expense account.

**Detail information you cannot change.** You cannot add detail lines to the return, and you cannot change the item number, quantity received, and extended cost (from the receipt detail).

If the return is job-related, you cannot change job information.

**Tax information.** Detail taxes are calculated for the returned quantities only. As with other Purchase Orders transaction types, you use the Detail Items/Taxes form to change tax class and tax-included options for a detail line. (Select the line, then click the Item/Tax button.) You cannot change tax information on the line itself.

**Prorating additional costs.** No additional cost details appear on a return. You cannot edit costs or add new costs. When you return items to which you prorated additional costs on the receipt, the costs are allocated according to the reproration method specified on the receipt.

If you return all items on a receipt that included additional costs and used Prorate as the return proration method, the costs remain allocated as
specified on the receipt.
Entering Returns for Non-Existing Receipts

When you enter returns to cleared receipts, you can enter and change all the default information that appears from the vendor record and template code. You can also add as many detail lines as you need to match the information on the cleared receipt.

You enter the details of the returned items on the detail entry grid on the Return tab of the Return Entry form. With each detail, you must enter the item number, item description, location (if you use Inventory Control), and quantity returned. You can also enter the unit and return cost, unit of measure, unit weight, extended weight, vendor's item number, order number, and comments. If the detail includes a non-inventory item, you also enter the general ledger account to which the returned cost is expensed.

For job-related returns, you enter contract, project, and category information.

You do not enter the quantity received or extended cost.

**Tax information.** You edit tax information as for returns to receipts. Click the Item/Tax button on the Return tab to open the Detail Items/Taxes form to edit the tax class and tax-included option for detail lines; use the Taxes tab to edit the tax class, and tax amount for the vendor.
Entering Credit Notes and Debit Notes

When you select an existing invoice for a credit note or debit note, or a return for a credit note, the information from the original document is displayed in the Credit/Debit Note Entry form.

If you are creating a credit note or debit note from an invoice, the quantities received from the invoice are displayed and you can either accept or change the figures. The unit and extended costs are displayed as zeroes. You specify the credit or debit amount for the items you are crediting or debiting. You then delete details you are not crediting or debiting, or leave the amounts for them at zero.

If you are creating a credit/debit note from a return, the program displays the quantities returned and the unit and extended costs. If you have security rights to these fields, you can change the amounts, but cannot delete detail lines. If the credit/debit pertains to an serialized or lotted item, you can allocate lot numbers and/or serial numbers when entering the note.

You cannot change certain information from an invoice or return, such as the vendor number, template code, currency (in multicurrency ledgers), and key information from each detail line, such as the item number, location, and unit of measure.

If you are creating a credit note from a return, the additional cost details for the primary vendor are also displayed from the originating receipt, if any. If you are creating a credit note or debit note from an invoice, the additional cost details are displayed from the invoice. The additional cost amount appears as zero and you enter the amount to be credited or debited. You cannot change the additional cost code, proration and re-proration methods, or the expense and return general ledger accounts. You can add new additional costs on credit notes and debit notes but you must select No Proration as the proration method, so that the cost is expensed to a general ledger account.

**Tax information.** You can edit tax information for the vendor and for details just as you could on the invoice or return.

**Entering credits or debits to non-existing invoices or returns.** When
you enter credit notes and debit notes to cleared or non-existing invoices, you can enter and change all the default information that appears from the vendor record and template code. You can also add as many detail lines and additional cost details as you need.
Entering Additional Costs on Credit Notes and Debit Notes

If you are creating a credit note from a return, the additional cost details for the primary vendor are displayed from the originating receipt, if any. If you are creating a credit note or debit note from an invoice, the additional cost details are displayed from the invoice. The additional cost amount appears as zero and you enter the amount to be credited or debited.

You cannot change the additional cost code, proration and reproration methods, or the expense and return general ledger accounts. You can add new additional costs on credit notes and debit notes but you must select No Proration as the proration method, so that the cost is expensed to a general ledger account.

**Note:** If you are adding additional costs, you must choose No Proration. If you choose to prorate, the program will display an error message and prevent you from posting the credit note or debit note.
Checking Credit Note and Debit Note Totals

- Use the Taxes tab on the Credit/Debit Note Entry form to edit tax classes and tax amounts for the credit note or debit note.
- Use the Totals tab on the Credit/Debit Note Entry form to look up the total weight for the debit or credit, the number of item details and additional cost details, subtotals of credits or debits for items, additional costs, excluded tax, and the grand total.
Posting Credit Notes and Debit Notes

During posting, the total of all details and taxes is compared to the document total you entered. The document is posted only if the two totals are the same.

Posting assigns the document number you entered and completes the credit note or debit note and any returns to which you posted credit notes. You cannot change or delete a credit note or debit note after posting it.

If the credit note affects item quantities, posting updates the quantities in Inventory Control.

Job-related credit notes update Project and Job Costing quantities and costs only if the credit note differs from the posted return.

If you use the Keep Transaction History option, you can display posted credit notes and debit notes in the Credit/Debit Note Entry form until you clear them from Purchase Orders. If you do not keep transaction history, the transactions are deleted during posting or Day End processing (depending on when you cost inventory).
Day End Processing of Credit Notes and Debit Notes

Note: If you cost inventory during posting instead of during Day End Processing, almost all Day End processing tasks will also take place when you post transactions.

• If you are concerned with transaction processing speed, you should cost inventory transactions during Day End Processing—not during posting. (You change this setting on the Processing tab of the I/C Options form if you are using the Inventory Control module.)

When you run Day End Processing to process credit notes that included changes to costs, the program updates item costs in Inventory Control.

Day End Processing creates the Credit/Debit Note Posting Journal and the general ledger transactions for the G/L Transactions report, if you print it in Purchase Orders. It also adds information from each credit note and debit note to the invoice batch that is created for Sage ERP Accpac Accounts Payable. (The general ledger transactions are created when you post the credit and debit notes in Accounts Payable.)

When a credit note is applied to an invoice, the invoice number appears in the Apply To field when you display the transaction in Accounts Payable's Invoice Entry form.

Finally, Day End Processing updates history and statistics, if kept, in Purchase Orders and Inventory Control. If you do not keep transaction history, it deletes all credit and debit notes.

For information on the general ledger accounts affected by credit notes and debit notes see Journal entries generated from posted Purchase Orders transactions.

See also Posting Journals
Using Security with Credit Notes and Debit Notes

You can use security with the Credit/Debit Note Entry form, separately specifying the persons who can add credit notes and debit notes, edit quantities, edit costs, and export credit notes and debit notes.

General Ledger Journal Entries Generated from Receipts

Receipts are assigned source code PO-RC on the G/L Transactions report.

Receipt transactions debit the item's inventory control account and credit the item's payables clearing account with the total of extended item cost, allocated taxes, and any prorated additional costs and their allocated taxes.

If an item uses the LIFO or FIFO costing method, the receipt number and date, item quantity received, and item cost are added to Inventory Control's receipt buckets for the item.

**Receipt adjustments.** Additional general ledger transactions are created if receipts are edited to change item quantities or costs. The journal entries debit the inventory control (or Inventory/Expense) account and credit the payables clearing account with quantity or cost increases, or credit the inventory control account and debit the payables clearing account with quantity or cost decreases.

**Non-inventory items.** When you post a receipt for a non-inventory item in Purchase Orders, the expense is posted during posting or day-end processing, and the non-inventory payables clearing account is credited. Posting the invoice in Accounts Payable generates a general ledger entry to debit the non-inventory payables clearing account and credit the payables control account.

**New prorated additional cost added on an invoice.** When a new additional cost is added on an invoice, general ledger journal entries are created to prorate the cost to the receipt items, if applicable, debiting the inventory control accounts for the items and crediting the payables clearing account.

**Job-related receipts.** Items received for projects do not go into inventory; instead, the value of the item goes into a Work-In-Progress account specified for the contract in Project and Job Costing.

When you post job-related receipts or invoices, credit notes, and debit notes with changes to the receipt information, Purchase Orders creates
general ledger journal entries to update the Work-In-Progress and Payables Clearing accounts with the total of extended item cost, allocated taxes, and any prorated additional costs and their allocated taxes.

The program also updates the committed and actual quantities and costs for the contract in Project and Job Costing.

PO will also create transactions for any overhead associated with the items or additional costs, and for non-inventory items (such as labor) received for the job.
Invoices are assigned source code PO-IN on the G/L Transactions report. The journal entries for invoices are created when the Purchase Orders batch is posted in Accounts Payable.

If a receipt is invoiced without changes to quantities and costs, a journal entry is created to debit the item’s payables clearing account and credit the vendor’s payables control account (with the total of the extended item cost, allocated taxes, and any prorated additional costs and their allocated taxes).

If quantities or costs were changed on the invoice, Purchase Orders creates general ledger journal entries that:

- Debit or credit the item’s inventory control (or inventory/expense) account for the difference between the receipt amount and the invoice amount.
- Debit or credit the item’s payables clearing account for the difference between the receipt amount and the invoice amount.
- Debit the Payables Clearing account for the original amount of the receipt, net of any adjustments as listed above.

For example, if the item cost increases on an invoice, the difference between the invoice cost and the receipt cost is debited to the item’s inventory control or inventory/expense account.

**New prorated additional cost added on an invoice.** When a new additional cost is added on an invoice, general ledger journal entries are created by Day End Processing to debit the Inventory Control account with the amount of the cost and credit the payables clearing account.

**Non-inventory items.** When invoices are posted for non-inventory items, the general ledger journal entries created in Accounts Payable debit the expense account specified for the non-inventory item and credit the vendor's payables control account.

If you choose the P/O option to create G/L entries for non-inventory expenses from receipts/returns (on the Integration Options tab of
Purchase Orders' G/L Integration form), Purchase Orders will create debit entries to expense accounts and credit entries to the non-inventory payables clearing account when you post receipts. (Posting the invoices later in A/P will credit the payables control account and debit the non-inventory payables clearing account.)

Expensed additional costs. If additional costs are expensed (rather than prorated to the items on a receipt), Day End Processing creates an Accounts Payable invoice that will debit the additional cost expense account and credit the vendor's payables control account when it is posted in Accounts Payable.

If you choose the P/O option to create G/L entries for expensed additional costs, Purchase Orders will create debit entries to expense accounts and credit entries to the Expensed Additional Cost Clearing Account when you post additional costs. (Posting the invoices later in A/P will credit the payables control account and debit the Expensed Additional Cost Clearing Account.)

Note: If the additional costs are job-related, Purchase Orders will always create G/L entries for expensed additional costs during posting — whether you select this option or not.

Job-related items. Purchase Orders sends transactions to Project and Job Costing if an invoice includes an adjustment to the receipt — such as a change to the cost, quantity, or billing rate. These transactions do not affect the G/L or A/P.

For example:

- If you change the billing rate, Purchase Orders generates a new transaction for the difference between the old billing rate and the new billing rate.
- If you also change quantities, Purchase Orders will also create a billing adjustment transaction for the quantity difference.
- If the receipt originated from a purchase order and you change the quantity outstanding, Purchase Orders will update the committed quantities and costs in Project and Job Costing.

Do not change invoices in Accounts Payable. Job-related invoices transferred to A/P from P/O will not update Project and Job Costing when
posted in Accounts Payable. Purchase Orders directly updates Project and Job Costing with invoice amounts.
Returns of items to vendors are assigned source code PO-RT on the G/L Transactions report.

In Inventory Control, returns debit the item's payables clearing account and credit the item's inventory control/expense account with the value of the returned items, prorated additional costs, and allocated taxes. When additional costs prorated to returned items are reprorated, additional entries are created to debit or credit the Inventory Control and Payables Clearing accounts for the remaining items on the receipt.

When a credit note is posted for the return and you have run Day End processing, a credit note is created in the Accounts Payable batch. When the credit note is posted in Accounts Payable, the transaction will debit the vendor's payables control account and credit the vendor's payables clearing account with the value of the returned items, prorated additional costs, and allocated taxes.

**Non-inventory items.** When non-inventory items are returned, Day End Processing does not create any journal entries for Inventory Control accounts. The transaction is sent to Accounts Payable as an invoice or credit note which will debit or credit the G/L expense account specified for the item and post the corresponding credit or debit to the vendor's payables control account.
General Ledger Journal Entries Generated from Credit Notes

Credit notes are assigned source code PO-CR on the G/L Transactions report.

Credit notes debit the vendor's payables clearing account and credit the vendor's payables control account when the transaction is posted in Accounts Payable.

**Additional cost credits.** When a credit note is posted for an additional cost credit, the credit is debited to the expense account you assign and credited to the vendor's payables control account.

**Credits to returns.** When you post a credit note to a return with no quantity or cost changes, the vendor's payables control account is debited and the item's payables clearing account is credited.

If a credit note is posted to a return and there are cost changes, Purchase Orders debits or credits the payables clearing and inventory control accounts. When the credit note is posted in Accounts Payable, the payables control account is debited and the payables clearing account is credited.

When a credit note is posted for an invoice, Purchase Orders creates journal entries to debit the payables clearing account and credit the inventory control account, and Day End Processing creates a credit note for the transaction in the Accounts Payable batch. When you post the batch in Accounts Payable, a journal entry is created to debit the payables control account and credit the payables clearing account.

**Item cost adjustments.** When credit notes are posted to adjust item costs, Day End Processing creates general ledger journal entries to debit the payables clearing account and credit the item's inventory control accounts.

When the credit note is posted in Accounts Payable, a journal entry is created to debit the vendor's payables control account and credit the payables clearing account.

**Taxes.** Allocated taxes from credit notes are posted to the same general
ledger accounts as costs. Recoverable and expensed taxes are posted to the accounts specified for the tax authorities in Tax Services and the inventory control or payables accounts used for the related costs.
Debit notes are assigned source code PO-DB on the G/L Transactions report.

When a debit note is posted for an invoice in Purchase Orders, a general ledger journal entry is created during posting or Day End Processing to debit the item's inventory control account and credit the item's payables clearing account.

When the debit note is posted in Accounts Payable, the payables clearing account is debited and the vendor's payables control account is credited.

**Taxes.** Allocated taxes from debit notes are posted to the same general ledger accounts as their related costs. Recoverable and expensed taxes are posted to the accounts specified for the tax authorities in Tax Services and the inventory control or payables accounts used for the related costs.
Creating General Ledger Batches

If you do not use the option to create general ledger transactions during posting or during day-end processing, you must use the Create Batch form when you want to create a general ledger transaction batch to record the inventory transactions and entries to payables clearing. You can then process the batch in Sage ERP Accpac General Ledger, if you use it, or post it manually to another general ledger.

If you want to print the G/L Transactions report you must print it before you create the general ledger batch. When you create the batch, Purchase Orders deletes the information in the G/L Transactions report.

The Create Batch form also lets you post a batch of invoices in Accounts Payable from invoices or credit/debit notes posted in Purchase Orders.

You can use this form to post A/P invoices created by Purchase Orders only if you selected On Request Using Create Batch Icon for the Post A/P Batches option on the Processing tab of the P/O Options form.

Editing Vendor and Detail Tax Information

Purchase Orders calculates a tax amount on purchase orders, receipts, invoices, returns, credit notes, and debit notes if all three of the following conditions apply:

- You have entered tax rates for the applicable tax authorities and classes in Tax Services.
- The vendor for the document is subject to tax.
- The transaction contains taxable items or taxable additional costs.

In Purchase Orders, tax information is calculated and displayed for individual details and for the total purchase order, receipt, invoice, return, credit note, or debit note. (No tax information is displayed for requisitions.)

Tax calculations are based on the rates entered for the various authorities and tax classes in Tax Services.

You can edit some tax information for individual detail lines, but you can change tax amounts directly only for the document as a whole. To change tax amounts for the primary vendor, use the Taxes tab; for secondary vendors, use the Additional Cost Vendor Taxes form.

Exporting Credit Notes and Debit Notes

Use the Export command on the File menu in the Credit/Debit Note Entry form to transfer credit note and debit note transactions created in Purchase Orders to non-Sage ERP Accpac applications, or to a file to be edited and imported later.

Before exporting, decide which fields to include in the export file. You must select fields for each type of record used for credit notes and debit notes. You should also find out the path for the export file you want to use or create.

When you choose Export, Purchase Orders exports all the credit notes and debit notes currently in the system. If you do not want to export everything, use the Set Criteria option to specify the documents to export.
Credit/Debit Note Entry — Credit/Debit Tab

Use this tab to enter:

- The credit note or debit note date.
- The invoice or return number to which the transaction applies.
- The billing address for the credit note or debit note.
- The remit-to address where you send the payments to the vendor.
- An optional description and reference.
- The credit note or debit note total.
- Enter new details for a credit note or debit note you are entering without an invoice or return number.
- Edit the item detail lines for a credit note or debit note for an existing invoice or return from a primary vendor. (You cannot add new detail lines when working with an existing invoice or return, and you cannot delete detail lines displayed from returns.)
- Open a separate form to edit tax or other information for a single detail. The Detail Items/Taxes form displays all the fields for a single detail, including tax fields.

The Credit/Debit tab also lets you open the following additional forms:

- Bill-To Location form
- Remit-To Location form
- Detail Comments form

Credit/Debit Note Entry Form — overview
Credit/Debit Note Entry — Additional Costs tab

Use this tab to:

- Add the additional costs on the credit notes and debit notes you receive from your vendors.
- Specify how to reprorate the costs if you returned the items.

**Note:** If you are adding additional costs, you must choose No Proration. If you choose to prorate, the program will display an error message and prevent you from posting the credit note or debit notes.
- Edit additional cost details from invoices you are crediting or debiting.
- Allocate new additional costs (added to the credit note/debit note) to one or more receipts.

**To prorate additional costs for a single receipt:**

1. Select the additional cost on the Additional Cost entry grid.
2. Press F9 to open the Detail Costs/Taxes form.
3. Click the Zoom button beside the Distribute Proration field.
4. Distribute the additional cost (and billing rate for billable details).

**To prorate additional costs for several receipts:**

1. Select the additional cost on the Additional Cost entry grid.
2. Press F9 to open the Detail Costs/Taxes form.
3. Click the Dist. Cost button to display the Cost Allocation form. (The Zoom button beside the Distribute Proration field will be dimmed.)
4. Highlight the receipt you want, and click the Zoom button in the column heading to display the Distribute Proration form.
5. Distribute the additional cost (and billing rate for billable details).

- Checking Credit/Debit Note totals
- Credit/Debit Note Entry form – overview
This topic contains an overview of how posting, day-end processing, and audit trails relate to transaction processing in Purchase Orders.

Purchase Orders lets you enter requisitions, purchase orders, receipts, invoices, returns, credit notes, and debit notes. Using Sage ERP Accpac Purchase Orders, your purchase-order processing cycle can include:

- Posting requisitions.
- Creating and posting purchase orders from requisitions or without using requisitions.
- Posting receipts to purchase orders or without referencing particular purchase orders.
- Posting returns to receipts or without referencing receipts.
- Posting invoices to receipts or without receipts (for additional costs).
- Posting credit notes to invoices or returns or without referencing invoices or returns.
- Posting debit notes to invoices or without invoices.

Purchase Orders uses *online* transaction processing rather than batch processing. This means that you post each transaction individually after you enter it.

**Posting updates quantities.** When you post transactions, Purchase Orders immediately updates item quantities in Inventory Control so you always know your inventory levels. Depending on when you cost inventory, item costs and other accounting and statistical information may be updated by posting or by Day End Processing.

**Day End updates everything else.** You run Day End Processing to create batches of Accounts Payable summary invoices, credit notes, and debit notes. If you cost inventory during Day End Processing, it will also update purchasing history, statistics, and audit information.

Day End Processing/posting also creates batches of general ledger transactions and the Purchase Orders posting journals.

If necessary, you can run Day End Processing several times a day to
keep this information more current.

  - Distribute Proration (if prorating additional cost manually)
  - Distribute Cost (if distributing costs among several receipts)

- Optional Fields tab

- Rates tab (multicurrency ledgers)

- Totals tab
Entering Additional Cost Details on Invoices

When entering an invoice for a receipt, you see additional costs only for the vendor selected for the invoice. Additional costs for secondary vendors appear on separate invoices.

You can add new additional costs to an invoice, as described under Entering additional costs on receipts, and you can select any proration method except manual proration.

You can also edit the cost amounts displayed from a receipt, except for amounts that were manually prorated on the receipt.

Information you can edit for additional cost details includes:

• Description, reference, and comment.

• Amount.

You can change all additional cost amounts, except those that were manually prorated on the receipt. Although you cannot delete an additional cost detail, you can change the amount to zero.

• General ledger accounts.
Non-inventory items

If you are adding additional costs for non-inventory items, you must choose No Proration. If you choose to prorate by quantity, cost, or weight, the program will display an error message and prevent you from posting the invoice.
Displayed tax information

Purchase Orders displays the following tax information for each additional cost detail:

- Amount of tax that is included in the extended item cost.
- Net cost of additional cost items with tax included in their prices (the tax base).
- Total allocated tax amount — the amount of tax that will be allocated to the cost of the item.

Use the Cost/Tax button on the Additional Cost tab to view and edit tax information for the additional cost, as described below.
Allocating additional costs to multiple receipts

To prorate a new additional cost to multiple receipts, select the detail line and then click the Distribute (Dist.) Cost button to open the Cost Allocation form. You can manually enter amounts to allocate to each receipt, or you can let Purchase Orders calculate the amount to allocate according to the proration method you selected on the Additional Costs tab.

If you want to prorate or expense a job-related cost to several jobs, you must have a receipt detail for each of the jobs to which you want to apportion costs.

You can also specify retainage for job-related costs.
Editing the tax distribution

To check or edit tax distributions for an additional cost detail, select the detail line on the Additional Costs tab, then click the Cost/Tax button to open the Costs/Taxes form.

The Costs/Taxes form lets you specify, for each tax authority, the tax class for the item and whether tax is included in the cost (if allowed by the authority). The Costs/Taxes form also displays the recoverable and expensed tax amounts in the tax distribution pop-up form.

If you change the tax class for an additional cost that was manually prorated on the receipt, any resulting difference in the tax amount is posted to the default cost expense account specified in the Options form.

You can override the additional cost tax amount by changing the total tax on the Taxes tab; however, the program will prorate the tax change to each of the details. You can use the Calc. Taxes button to recalculate all of the tax on the invoice.
Use the Detail Costs/Taxes form to:

- View or edit an additional cost detail.
  
  Instead of presenting the details of an additional cost in a tabular format, the Detail Costs/Taxes form displays all the fields for a single detail on a data entry form. In addition, it includes fields that allow you to change the tax information or enter a comment for a detail.

- Check tax information and calculations for a selected additional cost detail.

- Edit the tax class and tax-included options for the tax authorities.

- Add a comment for an additional cost detail.

- Add a new additional cost detail.

**To use the Detail Costs/Taxes form**

1. On the Additional Cost tab, select the cost detail for which to review taxes.

2. Click the Cost/Tax button, or press the F9 key.

3. Make any required changes to the selected additional cost detail.

   You can select a different detail using the navigation buttons beside the Line Number field.

   You can enter a new detail by clicking the New button near the Line Number field.

4. When you have finished, click Close to return to the Additional Costs tab.

Click the following icons for information about using these buttons:

Finder or F9

For information about one of the following buttons on the Detail Cost/Taxes form, click the link:
Go back to the Additional Costs tab

Invoice Entry Form — overview
Invoice Entry — Bill-To Location Form

Use this form to edit an existing bill-to location address or to type a new billing address for the invoice.

You do not have to enter a bill-to location code or address information.

To use the Bill-To Location form

1. If you use Inventory Control, type the location code to use in the Bill-To Location field, or select it from the Finder.

2. To enter or edit address information, or if you do not use Inventory Control, click the Zoom button beside the Bill-To Location field or press the F9 key in the field.

3. Type the name, address, and contact information to use for the location, or edit displayed information (from the receipt or the location record in Inventory Control).

4. When finished, choose the Close button or press F9 to return to the Invoice tab.

Opening and closing the Bill-To Location form

- Click the Zoom button to open the Bill-To Location form with a mouse.
- Use the F9 key on your keyboard to open or close the Bill-To Location form.
- Choose the Close button to close the Bill-To Location form.

Go back to the Invoice tab.
Use this form to enter, edit, or delete comments that apply to the detail line.

**To enter or edit comments**

1. Open the Detail Comments form. Either:
   - Select the detail line, then click the Zoom button beside the Comments field, or
   - With the insertion point in the Comment field for the detail, press the Shift and F9 keys.
2. Type the remarks, or make the changes you need, pressing Enter to start each new line.
3. When finished, click the Close button or press Shift and F9 to close the form.

**To delete comments**

1. Open the Detail Comments form.
2. Highlight the text to delete, then press the Delete key on your keyboard. If a message appears asking you to confirm the deletion, click Yes.
3. When finished, click the Close button or press Shift and F9 to close the form.

You can also delete comments by changing the entry for the field to No in the detail entry grid on the Invoice, or by deselecting the Comments box on the Detail Items/Taxes form (click the field or press the Shift and F9 keys at the same time in it).

If you use this method, your remarks are not immediately deleted. If you decide before posting the invoice that you want to use the remarks, enter Yes (or reselect the Comments field on the zoomed detail-entry form). The original remarks will reappear.

Go to the [Invoice tab](#).
Invoice Entry Form — Create Invoice From Receipts

Use this form to select several receipts and add them to the invoice.

**To use the Create Invoice From Receipts form**

1. Either click the Zoom button ( ) beside the From Multiple Receipts field, or click the option to select it, then press the F9 key.

2. In the form that opens, either use the Finder to select, one at a time, the receipts you wish to use or type the numbers in the Receipt Number column.

3. When you have selected all the receipts you need, click the Invoice button to add the receipt details to the invoice.

4. Click the Close button to close the form when you have finished.

**Note:** When you create an invoice from more than one receipt, all of the invoice header information (including the fields on the Optional Fields tab) will come from the first receipt that you select.

Return to the [Invoice tab](#).
Use this form to look up the address information entered for the selected remit-to location. Address information appears only if you select a remit-to code for the vendor.

You cannot edit information in this form. Use Accounts Payable to add and edit remit-to locations for vendors.

To display the Remit-To Location form, on the Invoice tab of the Invoice Entry form either:

- Click the Zoom button (▲) next to the Remit-To Location field, or
- With the insertion point in the Remit-To Location field, press the F9 key.

To close the Remit-To Location form, either press the F9 key or click the Close button.
Invoice Entry — Invoice Tab

Use this tab to enter:

- The receipt number (or numbers) to which the invoice applies.
- The invoice date.
- The invoice total.
- The billing address for the invoice.
- The remit-to location.
- An optional description and reference.
- The 1099/CPRS code and amount (for vendors who are subject to 1099 or CPRS reporting).
- Invoice details.

The detail entry grid (at the bottom of the tab) lets you:

- Edit or remove item detail lines for an invoice from a primary vendor.

  **Note:** You cannot add more detail lines to the invoice tab. All lines must have been on the receipt. You can, however, add costs to the Additional Costs tab, and you can change the quantity being invoiced.

- Edit received quantities, item costs, and detail discounts, if you have security rights to do so.

- Enter comments and optional fields for the details.

- Display all the fields, including tax fields, for a selected detail on the Item/Tax form.

The Invoice tab also lets you open the following additional forms:

- Bill-To Location form
- Create Invoice From Receipts form
- Detail Items/Taxes form
- Detail Comments form
- Remit-To Location form
Click the following icons and links for information about using the buttons:

- Item/Tax
- Calc.Taxes

Invoice Entry — Retainage Tab

This tab appears only if you check the Retainage checkbox for job-related invoices. (The Retainage checkbox appears only if you use retainage accounting in Accounts Payable.)

You use this tab to:

- Choose the payment terms for retained amounts.
- Choose whether to use the original retainage exchange rate for the receipt or use the current exchange rate (if the items were originally received in another currency).

For information on using other tabs on the Invoice Entry form, click the corresponding links:

Invoice Entry Form — overview
Invoice Entry — Additional Costs Tab

Use this tab to:

- Add additional costs charged on the shipment by either a primary vendor or a secondary vendor, such as for handling charges, service charges, and duty.
- Specify how to prorate new additional costs or reprorate the costs if you return the items.
- Allocate new additional costs (added to the invoice) to one or more receipts.

**To prorate additional costs for a single receipt:**

1. Select the additional cost on the Additional Cost entry grid.
2. Press F9 to open the Detail Costs/Taxes form.
3. Click the Zoom button beside the Distribute Proration field.
4. Distribute the additional cost (and billing rate for billable details).

**To prorate additional costs for several receipts:**

1. Select the additional cost on the Additional Cost entry grid.
2. Press F9 to open the Detail Costs/Taxes form.
3. Click the Dist. Cost button to display the Cost Allocation form. (The Zoom button beside the Distribute Proration field will be dimmed.)
4. Highlight the receipt you want, and click the Zoom button in the column heading to display the Distribute Proration form.
5. Distribute the additional cost (and billing rate for billable details).

You can also open the Detail Costs/Taxes form to display or edit all the information for a single additional cost detail on a separate form. You can also enter a comment for the additional cost detail using the Detail Costs/Taxes form.

For information about a button on the Additional Costs tab, click its name:

Invoice Entry — Optional Fields Tab

This tab appears if you have assigned optional fields to the Invoice Entry form (using the Optional Fields form in the Setup folder).

Use the tab to:

- Add or change information in the optional fields that are assigned to this invoice.

If you have assigned optional fields to invoice and additional cost details, you can enter optional field information for each item on the individual detail lines.

**To enter optional information**, type or choose your entry for each optional field.

If the optional field has a Finder, you can select one of the entries from the Finder list. Depending on how the list has been set up, you may be able to leave the field blank.

Click this icon for information about using the Finder:

- Purchase Order Number
- Vendor Number (and name)

- Vendor Information form (opened from Vendor Number field)
- Order tab
  - Detail entry grid (on Order tab)
- Taxes tab
- Optional Fields tab
- Rates tab
- Totals tab
You can consolidate details from separate requisitions into single details on purchase orders for the same vendor, item, unit of measure, and (if you use Inventory Control) inventory location. The program combines all related details, with the exception of details that include drop-ship addresses. A separate purchase order detail is created for each requisition detail with a drop-ship address.

**Consolidation deletes order numbers.** Any order numbers entered in requisition details are lost if you consolidate when creating purchase orders, but you can edit the new purchase orders to re-enter the order numbers you need.

**Sample consolidations.** For example, assume the following detail lines exist for a vendor on the requisitions from which you are creating purchase orders and you have chosen to consolidate details:

<table>
<thead>
<tr>
<th>Line</th>
<th>Item</th>
<th>Loc.</th>
<th>Qty</th>
<th>Unit</th>
<th>Drop-Ship</th>
<th>Order No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>A1-103/0</td>
<td>1</td>
<td>10</td>
<td>Ea.</td>
<td>Yes</td>
<td>None</td>
</tr>
<tr>
<td>2</td>
<td>A1-103/0</td>
<td>1</td>
<td>15</td>
<td>Ea.</td>
<td>No</td>
<td>21234</td>
</tr>
<tr>
<td>3</td>
<td>A1-103/0</td>
<td>1</td>
<td>7</td>
<td>Ea.</td>
<td>No</td>
<td>37288</td>
</tr>
<tr>
<td>4</td>
<td>A1-103/0</td>
<td>2</td>
<td>9</td>
<td>Ea.</td>
<td>No</td>
<td>None</td>
</tr>
</tbody>
</table>

The following details are included on the purchase orders:

<table>
<thead>
<tr>
<th>Line</th>
<th>Item</th>
<th>Loc.</th>
<th>Qty</th>
<th>Unit</th>
<th>Drop-Ship</th>
<th>Order No.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>A1-103/0</td>
<td>1</td>
<td>10</td>
<td>Ea.</td>
<td>Yes</td>
<td>None</td>
</tr>
<tr>
<td>2</td>
<td>A1-103/0</td>
<td>1</td>
<td>22</td>
<td>Ea.</td>
<td>No</td>
<td>None</td>
</tr>
<tr>
<td>3</td>
<td>A1-103/0</td>
<td>2</td>
<td>9</td>
<td>Ea.</td>
<td>No</td>
<td>None</td>
</tr>
</tbody>
</table>

Lines 2 and 3 were combined because they are identical except for the quantity and order number. Notice that the line now has no order number and that the quantities are combined.
Line1 was not consolidated because it contains a drop-ship address. Line4 was not consolidated because it is for a different location.

**Also note:** Lines will not be consolidated if they have optional fields, and they will not be consolidated if the vendor item numbers are different.

Go back to [Creating purchase orders from requisitions](#).
Day End Processing of Job-Related Transactions

Project and Job Costing actual and committed costs are updated during Day End processing with the total cost, plus the allocated and expensed taxes that are payable when a receipt is invoiced (excludes tax on retainage).

Project and Job Costing is also updated with taxes on retainage amounts when the retainage is invoiced in Accounts Payable.

For example, assume a series of transactions for 440.00 cost, plus 27.72 in expensed taxes — for a total of 467.72.

The following transactions are sent from to Project and Job Costing after you post a purchase order and run Day End Processing:

<table>
<thead>
<tr>
<th>Committed Costs</th>
<th>Actual Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Extended cost</td>
<td>470.80</td>
</tr>
<tr>
<td>Labor amount</td>
<td>0.00</td>
</tr>
<tr>
<td>Overhead amount</td>
<td>0.00</td>
</tr>
<tr>
<td>Total cost</td>
<td>470.80</td>
</tr>
</tbody>
</table>

The following transactions are sent from to Project and Job Costing after you post a receipt and run Day End Processing:

<table>
<thead>
<tr>
<th>Committed Costs</th>
<th>Actual Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Extended cost</td>
<td>3.08</td>
</tr>
<tr>
<td>Labor amount</td>
<td>0.00</td>
</tr>
<tr>
<td>Overhead amount</td>
<td>0.00</td>
</tr>
<tr>
<td>Total cost</td>
<td>3.08</td>
</tr>
</tbody>
</table>

The 3.08 committed amount is the expensed tax portion for the retainage. When the retainage is invoiced in Accounts Payable, the committed and actual costs are updated for the retainage tax amount.

To enter a blanket purchase order

1. Choose Purchase Order Entry from the P/O Transactions folder to add purchase orders.

2. Use the PO Order Number field to add a new purchase order. Press the Tab key or click the New button.
   
   If you do not want Purchase Orders to assign the order number, type the new number yourself.

3. Type the vendor number or select it from the Finder. You can also type a new vendor number, not yet added in Accounts Payable.

4. Choose Blanket in the PO Type field.

5. Enter the total amount that can be used for the blanket purchase order in the Original Amount field.

6. Complete the remaining Purchase Order Information and Vendor Information tabs with the information you need for the purchase order.

7. Add the details you are ready to order from the purchase order. (You do not have to add all the details at once.)

8. Add optional field entries (if used) and other information for the purchase order.

9. In multicurrency ledgers, edit the exchange rate information, if necessary.

10. Choose the Post button to post the purchase order.

For more information, see Blanket purchase orders

Purchase Order Entry — Order Tab

Use this tab to enter:

- An optional template code to specify the default entries in purchase order header and vendor information fields.
- Whether the purchase order is on hold.
- Whether to create the purchase order from one or more requisitions.
- The purchase order date.
- Arrival date.
- The purchase order type (active, blanket, future, standing).
- An optional FOB (free-on-board) location.
- Ship via information, and the default shipping and billing locations code for the purchase order.
- A terms code for the vendor.
- An optional description and reference.
- Add, edit or delete purchase order details.
- Specify canceled quantities.

[Purchase Order Entry — Overview]
**Purchase Order Entry — Optional Fields Tab**

This tab will appear only if you have Sage ERP Accpac's Transaction Analysis and Optional Field Creator, and if you have assigned optional fields to the Purchase Order Entry form. You see only the fields that you added using the Optional Fields form in the Setup folder.

The Optional Fields tab contains optional fields added by your company that apply to the purchase order as a whole. Optional fields on detail lines apply to the individual details.

- If the optional field has a Finder, you can select one of the entries from the Finder list. Depending on how the list has been set up, you may be able to leave the field blank.

- If no Finder appears, you do not have to enter data in the optional field, or you can enter any data you wish, depending on the field type and number of characters permitted in the field.

Optional field information can pass through the complete transaction cycle — from purchase requisitions, to purchase orders, to receipts, to invoices, and even to downstream ledgers like Accounts Payable and General Ledger — as long as you assign the same optional fields to each of the transaction forms and to the general ledger accounts.

Use this tab to:

- Add or change information in the optional fields that are assigned to the form.

For information about defining optional fields for the Purchase Order Entry form, see [Options Form - Processing tab](#).

Choose one of the links below for help on using the corresponding tab:

| Order | Taxes |

Purchase Order Entry — Overview
Purchase Order Entry — Bill-To Location Form

Use this form to edit an existing bill-to location address or to type a new billing address for the purchase order.

**To use the Bill-To Location form**

You do not have to enter a bill-to location code or address information.

1. If desired, type the location code to use in the Bill-To Location field, or select it from the Finder.

2. To enter or edit address information, click the Zoom button beside the Bill-To Location field or press the F9 key in the field.

3. Type the name and address information to use for the location, or edit displayed information (from the location record in Inventory Control).

4. When finished, click the Close button to return to the Order tab.

Go back to the [Order tab](#)
Use this form to type comments or instructions which apply to the detail line.

You can enter both comments and instructions for a detail line. You can also print the remarks on the purchase order.

**To enter comments or instructions**

1. Click the Zoom button (.Zoom) beside the Comments/Instructions field, or, while the insertion point is in the field, press the Shift and F9 keys at the same time.

2. Choose whether to enter a comment or an instruction.

3. Type the remarks, pressing Enter to start each new line.

4. When finished, click Close to close the form.

**To edit comments or instructions**

1. Click the Zoom button (.Zoom) beside the field, or, while the insertion point is in the field, press the Shift and F9 keys at the same time.

2. Choose whether to edit a comment or an instruction.

3. Make the changes you need.

4. When finished, click Close to close the form.

**To delete comments or instructions**

1. Click the Zoom button (.Zoom) beside the field, or, while the insertion point is in the field, press the Shift and F9 keys at the same time.

2. Choose whether to delete a comment or an instruction.

3. Highlight the line to delete, then press the Delete key on your keyboard. If a message appears asking you to confirm the deletion, choose Yes.

4. When finished, click Close to close the form.

You can also delete comments or instructions by changing the entry in
the field to No on the Order tab, and by deselecting the Comments/Instruction box on the Detail Items/Taxes form (click the field or press the Shift and F9 keys at the same time in it).

If you use this method, your remarks are not deleted (although they would not be printed on the purchase order). If you later decide you want to use the remarks, enter Yes (or reselect the Comments/Instructions field on the Detail Items/Taxes form). Your original remarks will reappear.

Drop-Shipment Address form
Purchase Order Entry — Totals tab
Purchase Order Entry — Detail Items/Taxes Form

The Detail Items/Taxes form displays all the fields for a single detail, rather than rows of data for all the details of an order. The form also displays additional tax information for the detail that doesn't appear on the detail-entry grid.

Use this form to:

- Add, edit, and delete purchase order detail lines.

To open or close the Detail Items/Taxes form, select the detail line, then click the Item/Tax button or press the F9 key. Press F9 or choose Close to return to the Order tab.

To add or edit details in the Detail Items/Taxes form

1. To start a new detail line, click the New button next to the Line Number field. To open an existing detail you want to edit, type its line number or use the navigation buttons beside the Line Number field to display the detail you need.

2. Type the information or changes for the detail, then choose Add or Save.

To delete details in the Detail Items/Taxes form

1. To open an existing detail you want to delete, type its line number or use the navigation buttons to display the line.

2. Click the Delete button.

For information about a button on the Detail Items/Taxes form, click the corresponding link below:

<table>
<thead>
<tr>
<th>Add</th>
<th>Save</th>
<th>Delete</th>
</tr>
</thead>
<tbody>
<tr>
<td>New</td>
<td>Calculate Taxes</td>
<td>Close</td>
</tr>
</tbody>
</table>

Click the Zoom button (▲) or press the Shift and F9 keys to open the Drop-Shipment Address or Detail Comments form. Click the Close button or press the F9 key to close the Drop-Shipment Address or Detail Comments form.
To check tax amounts for a purchase order and compare the totals on the screen with the totals on the source document, click the Totals tab.

Purchase Order Entry — Drop-Shipment Address Form

Use this form to enter or edit address information for a detail you wish the vendor to ship directly to an address other than the inventory location specified for the detail line (by the code you entered in the Location field.)

**To open the Drop-Shipment Address form**

- Press the Shift and F9 keys in the Drop-Ship field to open or close the form using your keyboard.
- Click the Zoom button beside the Drop-Ship field to open the form with a mouse.

**To enter a drop-shipment address**

1. Open the Drop-Shipment Address form, then select the type of address to enter.
2. If applicable, select the location code, customer number, or ship-to address code for the address.
3. Type the address or edit displayed information.
4. Choose Close.

**To edit drop-shipment addresses**

1. Open the Drop-Shipment Address form.
2. Make the changes you need. You can change all the information in the form, including the type of address.
3. When finished, choose Close to close the form.

**To delete drop-shipment addresses**

Change the entry in the Drop-Ship field to No on the detail entry grid, or deselect the Drop-Ship box on the Detail Items/Taxes form (click the field or press the Shift and F9 keys at the same time in it).

Purchase Order Entry — Totals tab
Purchase Order Entry — Create PO From Requisition Form

Use this form to:

- Select a requisition from which to create a purchase order.
- Select several requisitions from which to create a single purchase order.

Using requisitions is optional. You can create purchase orders without requisition numbers.

To use the From Requisition Number field

1. Click the Zoom button beside the From Requisition Number field, or tab to the field, then press the F9 key.
2. Type the requisition number to use or select it from the Finder.
3. Choose whether to select requisition details with no vendor numbers for your purchase order.
4. If you are including details with blank vendor numbers, choose the vendor type (optional).
5. Choose other requisition numbers, if applicable.

**Note:** When you create a purchase order from more than one requisition, the fields on the Optional Fields tab will be taken from the first requisition that you select.

6. When ready, choose the Order button. Yes appears in the Ordered column for each requisition and the session (sign-on) date appears in the Date Ordered column.
7. Choose Close to close the form.

Use the following buttons to:

- **Order** — To select the specified requisition details, insert Yes in the Ordered column for each requisition, and insert the session (sign-on) date in the Date Ordered column.
- **Close**— To close the Create PO From Requisition form.
Go back to the Order tab
Use this form to edit an existing ship-to location address or to type a new ship-to address for the purchase order. If you select an Inventory Control location code, the code appears as the default location code for the purchase order detail lines.

**To use the Ship-To Location form**

You do not have to enter a ship-to location code or address information.

1. If desired, type the location code to use in the Ship-To Location field, or select it from the Finder.

2. To enter or edit address information, click the Zoom button beside the Ship-To Location field or press the F9 key in the field.

3. Type the name and address information to use for the location, or edit displayed information (from the location record in Inventory Control).

4. When finished, click the Close button to return to the Order tab.

Go back to the Order tab.
Zoom Button ▼ or \[F9\]

The Zoom button and the F9 key let you view or enter supplementary information for a transaction detail or for a field.

In any detail entry grid, you can select a detail line, then click the F9 button to open a form that displays all the fields for a single detail, including additional tax-related fields that don't appear on the detail entry grid. You can edit existing details, and even add new details for the document.

Beside any field that displays a Zoom button, you can click the button, or press the F9 key while the insertion point is in the field, to open a form that lets you view and enter supplementary information specific to that field. In a detail entry grid, you press the Shift + F9 keys while the insertion point is in the field.
## Receipt Entry Field List

- **Receipt Number**
- **Vendor Number (and name)**

- **Receipt tab**
  - **Receipt details**

- **Taxes tab**

- **Retainage tab**

- **Additional Costs tab**
  - **Additional cost details**
  - **Distribute Proration (if prorating additional cost manually)**

- **Optional Fields tab**

- **Rates tab (multicurrency ledgers)**

- **Totals tab**
Receipt Entry — Receipt Tab

Use this tab to enter:

- A name for new vendor accounts that are not yet added to Accounts Payable.
- The vendor's address, phone numbers, and contact name on the Vendor Information form.
- The code that identifies the vendor's payment terms for the receipt.
- An optional template code to specify the default entries in receipt header and vendor information fields.
- The receipt date.
- An optional FOB (free-on-board) location.
- An optional shipping method or carrier.
- The default shipping and billing location codes for the receipt.
- An optional description and reference.

Use the detail information section at the bottom of the Receipt tab to:

- Add item detail lines to the receipt.
- Edit or delete existing detail lines.
- Specify received quantities and discounts. If you use Project and Job costing, use the same unit of measure that is on the estimate. (See Units of Committed and Actual Quantities)
- Enter additional receipt information using comments fields and optional fields.
- Identify items as fixed assets for management by the Sage Fixed Assets (FAS) module.
- Open a zoomed detail-entry form so that you can view all the fields for the detail at once.

You also use the Detail Items/Taxes form to change tax information for the detail.

Use the F9 key on your keyboard to open or close the Detail Items/Taxes form.
Note: You cannot view or edit costs unless you are assigned the security right to "Show Receipt Costing Information."

Receipt Entry — overview
If you are entering a job-related receipt, and you use retainage accounting in Accounts Payable, you can specify that the receipt is subject to retainage. Purchase Orders adds a retainage tab for receipts that are subject to holdbacks.

The Retainage tab will also appear on the Invoice Entry form and Debit note forms which reference this receipt.

You can change only the retainage rate and retainage terms on this tab. You enter job-related retainage amounts, retention periods, and retainage due dates with each job detail.

For detailed information about another tab on the Receipts Entry form, click the corresponding link, below:

<table>
<thead>
<tr>
<th>Receipt</th>
<th>Taxes</th>
<th>Additional Costs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Optional Fields</td>
<td>Rates</td>
<td>Totals</td>
</tr>
</tbody>
</table>

For more information about processing retainage, see [Using Retainage Accounting](#).
Receipt Entry — Additional Costs Tab

Use this tab to:

- Add additional costs charged on the shipment by both primary vendors and secondary vendors, such as for handling charges, service charges, and duty.
- Edit additional-cost amounts on previously posted receipts which are not yet fully invoiced.
- Assign or edit the terms code and tax group for the additional cost vendor.
- Check the number of details and the total amount of additional costs entered for the vendor.
- In multicurrency ledgers, edit exchange rate information for vendors who do not use the functional currency.
- Specify how to reallocate prorated costs of received items that you return.
- Open a form to check and edit tax information for the vendor.
- Open a form to check and edit tax information for the detail.

To display additional costs you have entered for a vendor, use the navigation buttons beside the Additional Cost Vendors field or enter the vendor number in the additional cost Vendor Number field. Individual additional cost details appear in the detail entry grid on the tab. Totals for the selected vendor are displayed at the bottom of the Additional Costs tab.

Non-inventory items

If you are adding additional costs for non-inventory items, you must choose No Proration. If you choose to prorate by quantity, cost, or weight, the program will display an error message and prevent you from posting the receipt.

For step-by-step instructions on using the Additional Costs tab, see Adding, editing, or deleting additional cost details.

To open secondary forms that provide more information about the
**additional costs**

- Choose the Vendor Taxes button to open the Additional Cost Vendor Taxes form.
- With the additional cost detail selected, choose the Cost/Tax button or press the F9 key to open the Detail Costs/Taxes form.
- With the pointer in the Vendor Number field, press the F9 key or click the Zoom button to open the Vendor Information form for secondary vendors.
- Use the **Calculate Taxes** button to cancel changes you make to tax amounts on the additional costs for the secondary vendor in this form.
- Use the **Close** button to close any of the secondary forms and return to the Additional Costs tab.

For more information about the Receipt Entry form, choose one of the links below for help on using the corresponding tab:

Receipt Entry — Optional Fields Tab

This tab appears if you have assigned optional fields to the Receipt Entry form. You see only the fields that you added using the Optional Fields form in the Setup folder.

Use the tab to:

- Add or change information in the optional fields that are assigned to the form.

For information about defining optional fields for the Receipt Entry form, see the Optional Fields form.

For more information about the Receipt Entry form, choose one of the links below for help on using the corresponding tab:

<table>
<thead>
<tr>
<th>Receipt</th>
<th>Taxes</th>
<th>Retainage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional Costs</td>
<td>Rates</td>
<td>Totals</td>
</tr>
</tbody>
</table>

To enter optional information, type the entry or choose it from the Finder (if the Finder is active).

If you can choose from a list of codes, the program displays the description, if any, entered for the code in the Optional Fields form.

You cannot change the description here. If you want to change the description, you must do so in the Optional Fields form in Common Services.

If there is a Finder beside the field, choose one of the entries in the Finder list. (You must select one of the choices if the "validate" option was selected for this field and blank is not allowed.)

Receipt Entry — Rates Tab

This tab appears only in multicurrency ledgers when you are entering a receipt for a primary vendor who does not use the functional currency.

Use the Rates tab to:

- Change the rate type, rate date, and exchange rate for converting the receipt amount from the vendor's currency to your functional (home) currency.

- Look up the rate information entered with the purchase order (if you are entering a receipt to a purchase order).

This tab appears only if you use multicurrency accounting and you are entering a receipt for a vendor who does not use the functional currency.

For more information about the Receipt Entry form, choose one of the links below for help on using the corresponding tab:

<table>

Receipt Entry — Additional Cost Vendor Taxes Form

Use this form when entering additional costs for secondary vendors to:

- Check tax information and calculations for the selected additional cost vendor.
- Edit the tax class and tax-included options for the tax authorities.

To use the Additional Cost Vendor Taxes form

1. On the Additional Costs tab, select the secondary vendor for which you need to review totals.

2. Click the Vendor Taxes button on the Additional Costs tab.

3. Make any changes you need to tax classes and the tax-included options.

4. When you have finished, click the Close button to return to the Additional Costs tab.

To change tax information for a single additional cost detail, you use the Detail Costs/Taxes form. (On the Additional Costs tab, select the additional cost detail, then click the Cost/Tax button or press the F9 key.)

See also

- Adding, Editing, or Deleting Additional Costs
- Additional Costs tab
- Additional Cost Vendor Information form
You open the Bill-To Location Form from the Receipt tab of the Receipt Entry form.

Use this form to edit an existing bill-to location address or to type a new billing address for the receipt.

You do not have to enter a bill-to location code or address information.

To use the Bill-To Location form

1. If you use Inventory Control, you can type the location code to use in the Bill-To Location field on the Receipt tab, or you can select it using the Finder.

2. To enter or edit address information, click the Zoom button beside the Bill-To Location field or press the F9 key in the field. If you do not use Inventory Control, click the Zoom button (Zoom) to open the form; you will not be able to use the F9 key.

3. Type the name and address information to use for the location or edit displayed information (from the location record in Inventory Control).

4. When finished, click the Close button or press F9 to return to the Receipt tab.

Opening and closing the Bill-To Location form

- Click the Zoom button to open the Bill-To Location form with a mouse.
- Use the F9 key on your keyboard to open or close the Bill-To Location form.
- Choose the Close button to close the Bill-To Location form.

Go back to the Receipt tab.
Receipt Entry — Detail Comments Popup Form

Use this form to type comments which apply to the detail line. You can also print the remarks on the receiving slip.

To open the Detail Comments form

- From the Receipts tab
  1. Click the Comments field for the detail line you need.
  2. Click the Zoom button (◉) or press the Shift and F9 keys to open the Detail Comments form.

- From the Detail Items/Taxes form
  1. Click the Zoom button beside the Comments field.

To enter a comment or an instruction

1. Open the Detail Comments form.
2. In the Type field, select Comment or Instruction.
3. Type the comment or instruction, pressing Enter to start each new line.
4. When finished, click Close to close the form.

To edit comments

1. Open the Detail Comments form.
2. Make the changes you need.
3. When finished, click Close to close the form.

To delete comments

1. Open the Detail Comments form.
2. Highlight the text to delete, then press the Delete key on your keyboard. If a message appears asking you to confirm the deletion, choose Yes.
3. When finished, click Close to close the form.

You can also delete comments by changing the entry in the field to No on
the Receipt tab, or by deselecting the Comments box on the detail Items/Taxes form (click the field or press the Shift and F9 keys at the same time in it).

If you use this method, your remarks are not deleted (although they would not be printed on the receiving slip). If you later decide you want to use the remarks, enter Yes (or reselect the Comments field on the zoomed detail-entry form). The original remarks will reappear.

Receipt Information
Receipt Entry — Create Receipt From PO Form

You use the Create Receipt From PO form to select purchase orders you are receiving from the vendor.
To use the Create Receipt From PO form

1. Click the From Multiple POs option, then either click the Zoom button (▲) next to the field or press the F9 key to open the Create Receipt From PO Form.

2. Enter or select purchase orders from the Finder list of the vendor's incomplete purchase orders. All purchase orders must have the same tax group.

3. When you have finished entering purchase orders click the Receive button.

   If you enter an incorrect purchase order number, highlight it and press Delete. To delete all the purchase order numbers or to cancel all the numbers press Close without pressing Receive.

4. Press Close to return to the Receipt Entry form.

   All the details of the specified receipts will be listed in the detail entry section on the Receipt tab. If you wish, you can edit quantities received and you can delete lines you did not receive (or reduce the quantity to zero).
Receipt Entry — Detail Items/Taxes Form

Use this form to add, edit, and delete receipt detail lines.

You also use this form to edit the tax classes and tax-included options for individual receipt details.

This form displays the fields for a single detail in a separate window, letting you see all the information you entered for the detail, including tax information.

To open the Detail Items/Taxes form, select the detail on the Receipt tab, then press F9 or click the Item/Tax button.

To close the Detail Items/Taxes form, press F9 or click the Close button to return to the Receipt tab.

To add or edit details in the Detail Items/Taxes form

1. To start a new detail line, click the New icon next to the Line Number field.

   To open an existing detail you want to edit, type its line number or use the navigation buttons beside the Line Number field to display the line you want.

2. Enter the information or changes for the detail.

   Note that you can change a tax class to another tax class that is assigned to the authority, and you can change the choice for the Tax Included option (if the tax authority permits tax-included costs).

3. When you are finished, choose Close.

4. To check tax amounts for a receipt and compare the totals on the screen with the totals on the source document, view the Totals tab.

To delete details in the Detail Items/Taxes form

You cannot delete details after you have posted the receipt.

1. To open an existing detail you want to delete, type its line number or click an arrowhead beside the Line Number field until the line you want is displayed.

2. Choose Delete. If you see a message asking you to confirm the
deletion, choose Yes.

Click the links below for additional help on using the corresponding buttons on the Detail Items/Taxes form:

<table>
<thead>
<tr>
<th>Save</th>
<th>Delete</th>
<th>Calculate Taxes</th>
<th>Close</th>
</tr>
</thead>
</table>

- Click the Zoom button (▲) or press Shift+F9 to open the Drop-Shipment Address form or the Detail Comments form.

Receipt Entry — Detail Costs/Taxes Form

This form displays the fields for a single detail in a separate window, letting you see all the information you entered for the additional cost detail, including tax information.

Use this form to:

• Add, edit, or delete additional cost detail lines.
• Edit the tax classes and tax-included options for additional cost details.

To open the Detail Costs/Taxes form, select the additional cost vendor and the detail on the Additional Cost tab, then press F9 or click the Cost/Tax button.

To close the Detail Costs/Taxes form, press F9 or click the Close button to return to the Additional Costs tab.

To add or edit details in the Detail Costs/Taxes form

1. To start a new detail line, click the New icon next to the Line Number field.

   To open an existing detail you want to edit, type its line number or use the navigation buttons beside the Line Number field to display the line you want.

2. Type the information or changes for the detail.

   Note that you can change a tax class to another tax class that is assigned to the authority, and you can change the choice for the Tax Included option (if the tax authority permits tax-included costs).

3. When you are finished, click the Close button.

To view total tax amounts for an additional cost vendor for a selected receipt

• Display the additional cost vendor on the Additional Costs tab, then click the Vendor Taxes button.

To delete details in the Detail Costs/Taxes form

You cannot delete details after you have posted the receipt.
1. Display the detail you want to delete by typing its line number or using the navigation buttons beside the Line Number field to display it.

2. Click the Delete button. If you see a message asking you to confirm the deletion, click Yes.
Receipt Entry — Drop-Shipment Address Form

Use this form to enter or edit address information for a detail where the goods were shipped directly to an address other than the inventory location specified for the detail line.

To open the Drop-Shipment Address form

- Press the Shift and F9 keys in the Drop-Ship field to open or close the form using your keyboard.
- Click the Zoom button beside the Drop-Ship field to open the form with a mouse.

To enter a drop-shipment address

1. Open the Drop-Shipment Address form, then select the type of address to enter.
2. If applicable, select the location code, customer number, or ship-to location code for the address.
3. Type the address or edit displayed information.
4. Choose Close.

To edit drop-shipment addresses

1. Open the Drop-Shipment Address form.
2. Make the changes you need. You can change all the information in the form, including the type of address.
3. When finished, choose Close to close the form.

To delete drop-shipment addresses

Change the entry in the Drop-Ship field to No in the detail entry section on the Receipt tab, or deselect the Drop-Ship box on the Detail Items/Taxes form (click the field or press the Shift and F9 keys at the same time in it).

Return to the Receipt tab.

Detail Comments form
Receipt Entry — Invoice Form

Use this form to create invoices for the primary and secondary vendors on a receipt.

**To create invoices**

1. Click the Invoice button.

2. To create an invoice for the primary vendor, type the invoice number in the Invoice Number field at the top of the form.

   To create invoices for secondary vendors, type the invoice number in the Invoice Number field on the line for the vendor whose invoice you are creating.

3. When finished, click Close to close the form.

4. When ready, click Post.

Invoices are created during posting. You can post only one invoice for each vendor on the receipt, and the invoice includes all charges entered for the vendor on the receipt.

After posting, you cannot change information in the Invoice form or on the receipt for item and additional costs you have invoiced.

You can also enter invoices for your vendors in the Invoice Entry form. Use this form if you want to enter 1099 information for vendors.

**See also**

Receipt Entry form — overview
Use this form to edit an existing ship-to location address or to type a new ship-to address for the receipt.
You do not have to enter a ship-to location code or address information.

To use the Ship-To Location form

1. If you use Inventory Control, you can type the location code to use in the Ship-To Location field, or select it from the Finder.
2. To enter or edit address information, click the Zoom button beside the Ship-To Location field or press the F9 key in the field. If you do not use Inventory Control, click the Zoom button to open the form; you will not be able to use the F9 key.
3. Type the name and address information to use for the location, or edit displayed information (from the location record in Inventory Control).
4. When finished, click the Close button or press F9 to return to the Receipt tab.

Opening and closing the Ship-To Location form

• Click the Zoom button (▲) to open the Ship-To Location form with a mouse.
• Use the F9 key on your keyboard to open (if you use Inventory Control) or close the Ship-To Location form.
• Click the Close button to close the Ship-To Location form.

Go back to the Receipt tab.
You open the Vendor Address Information Form from the Vendor Number field on the Receipt Entry form.

Use this form to edit an existing address or to type a billing address for the vendor.

To open the form, click the Zoom button (Zoom) beside the Vendor Number field.
Entering a Purchase Order Number

If you wish to enter one or more purchase order numbers from which to receive goods, you have three choices. You can:

- Enter a single number in the **PO Number** field (to receive from one purchase order for the vendor).

- Press the **From Multiple POs** field to receive all the outstanding purchase orders from the vendor.

- Press the Zoom button (■) next to the From Multiple POs field to open the Create Receipt From PO form and select the outstanding purchase orders to receive from the vendor.
Using P/O with Sage Fixed Assets (FAS)

Sage ERP Accpac provides full integration with the Sage Fixed Assets program, allowing you to enter asset transactions in Inventory Control, Purchase Orders, Accounts Payable, and Intercompany Transactions.

Sage FAS integration lets you:

• In Inventory Control, identify items as financial assets when you withdraw them from inventory for internal use by your Company.

• In Purchase Orders, Accounts Payable, and Intercompany Transactions, identify items as financial assets when you purchase them.

• Send asset information to Sage FAS to set up program assets that you have identified in Sage Accpac ERP.

Sage Fixed Assets works with Purchase Orders 5.5 and higher.
Recording the Receipt of Items for Sage FAS

You use the Receipt Entry form in Sage ERP Accpac Purchase Orders to receive items for use by your company (or organization) and identify them as fixed assets for Sage FAS.

To record the purchase of an asset for Sage FAS:

1. In Purchase Orders, from the P/O Transactions folder, choose Receipt Entry.
2. Create a new receipt transaction, entering header information as usual. (See Enter Receipts for detailed instructions on entering receipt transactions.)
3. Click the detail-entry grid (or click the Item/Tax... button or press the F9 key to display the form for detail entry).
4. Enter information for the item detail, including the item number for the asset you are receiving, location, quantity, and unit of measure, as usual.
5. Select the Fixed Assets option (double-click the column cell to display "Yes," and then click the Zoom button to open the Fixed Assets form.
6. Enter information for the asset record as follows:
   a. If you want to use a different template than the one displayed on the Fixed Assets form, use the Finder for the Sage FAS Template field to select a different one. Otherwise, either accept the default template code that appears or clear the entry from this field. (You do not have to use a template to create the asset in Sage FAS.)
   b. Use the Description field to enter the description that you want to use for the asset in Sage FAS.
   c. If you are using more than one asset item and you want to create separate asset records for each one in Sage FAS, select the Separate Assets option.

The program allocates the Sage FAS value entered on the Fixed Assets form proportionately to each Sage FAS record it creates. For example, for a quantity of 10 and a value of $25,000, the
program creates 10 asset records with a value of $2,500 each.

d. In the Sage FAS Quantity field, type the quantity of asset items you are receiving.

e. In the Sage FAS UOM field, type the unit of measure for the quantity that you entered.

f. In the Sage FAS Value field, type the value to book for the asset in Sage FAS.

7. Click Close to return to the item detail entry form.

8. When you have finished adding details for the transaction, click Close to return to the main Receipt Entry form.

9. Click Add, and then click Close.

**Note:** You must run Create Assets in the Sage FAS Integration module to update Sage FAS with the asset information.
Requisition Entry Field List

- Requisition Number
- Vendor Number (and name)

- Requisition tab
- Detail entry grid (Requisition tab)
- Optional Fields
- Totals tab
Purchase Orders provides a requisition approval system so you can ensure that only particular employees can approve purchase requisitions.

**You must turn on security to use requisition approval**

You must turn on security for the system database in Sage ERP Accpac's database setup program to use database security features.

Requisition approval is based on the Requisitions Manual Approval security right which you can assign to users in the Security Group form in Administrative Services.

- If you have the requisitions approval security right, all requisitions that you post are automatically approved, and your User ID appears in the Approver Name field.

- If you do not have the requisitions approval security right, all requisitions that you post are automatically put on hold, and the Approval Status field will stay Entered until the requisition is posted by a user with the approval rights.
Requisition Entry Form — Requisition Tab

Use the Requisition tab to:

- Specify the requisition date, required date, and expiration date.
- Put a requisition on hold or remove the hold.
- Say who requested the merchandise.
- Select an optional location code to be the default location for the requisition details, if you use Inventory Control, or type the name of a location.
- Type a description, reference, and comment for the requisition.
- Add requisition details.
- Edit or delete existing incomplete details.

You can work with details in either in:

- The detail entry grid on the Requisition tab.
- The Detail Items form that appears when you highlight a detail line and then click the Detail button or press the F9 key.

To add details

- For the first detail, on the detail-entry grid, tab to the Item Number field, then type the item number or select it from the Finder.

  If you wish to use the Detail Items form, after selecting the line, click the Detail button or press F9.

- To add more details using the detail entry grid, press the Insert key or tab past the end of the last line. To insert a new line in a particular location, highlight the line above the location, then press the Insert key.

  To add new lines using the Detail Items form, click the New icon beside the Item Number field. To select an existing detail, type the number of the detail line or use the navigation buttons beside the field to display the detail.

A detail is saved as you enter it on the detail entry grid or when you click
Add or Save in the Detail Items form.

**To edit details**

Select the detail you want to edit on the detail entry grid or on the Detail Items form, then enter your changes. You can change all the information you entered for the detail except the item number.

**To delete details**

1. Select the detail you want to delete on the detail entry grid or on the Detail Items form.

2. Press the Delete key if you are using the detail entry grid, or click the Delete button on the Detail Items form.

3. If you see a message asking you to confirm the deletion, choose Yes.

**Requisition Entry Form — Optional Fields Tab**

This tab will appear only if you have Sage ERP Accpac's Transaction Analysis and Optional Field Creator, and if you have assigned optional fields to the Requisition Entry form. You see only the fields that you added using the Optional Fields form in the Setup folder.

The Optional Fields tab contains optional fields added by your company that apply to the requisition as a whole. Optional fields on detail lines apply to the individual details.

- If the optional field has a Finder, you can select one of the entries from the Finder list. Depending on how the list has been set up, you may be able to leave the field blank.

- If no Finder appears, you do not have to enter data in the optional field, or you can enter any data you wish, depending on the field type and number of characters permitted in the field.

Optional field information can pass through the complete transaction cycle — from purchase requisitions, to purchase orders, to receipts, to invoices, and even to downstream ledgers like Accounts Payable and General Ledger — as long as you assign the same optional fields to each of the transaction forms and to the general ledger accounts.

Use this tab to:

- Add or change information in the optional fields that are assigned to the form.

For information about defining optional fields for the Receipt Entry form, see the [Optional Fields form](#).

Click one of the links below for help on using the corresponding tab:

Requisition Entry Form -- Overview
Return Entry Field List

- Return Number
- Vendor Number (and name)

- Vendor Information form (opened from the Vendor Number field)

- Return tab
  - Detail Entry section of the Return tab

- Taxes tab

- Retainage tab

- Optional Fields tab

- Rates tab (multicurrency ledgers)

- Totals tab
Day End Processing of Returns

**Note:** If you cost inventory during posting instead of during Day End Processing, almost all Day End processing tasks will take place when you post transactions.

- If you are concerned with transaction processing speed, you should cost inventory transactions during Day End Processing *not during posting*. (You change this setting on the Processing tab of the I/C Options form if you are using the Inventory Control module.)

Day End processing (or posting, if you cost inventory during posting):

- Updates costs in Inventory Control for non-job-related invoices, if you use Inventory Control.
- Updates quantities and costs in Project and Job Costing for job-related returns
- Creates general ledger transactions for the processed returns, and creates the Return Posting Journal.

  The general ledger accounts affected by return transactions are described in [Journal entries generated from posted Purchase Orders transactions](#).

- Adjusts and reprorates or expenses any additional costs posted with a receipt to remaining items on the receipt using the methods you specified.

  If you choose to expense or prorate additional costs that were originally prorated to the items being returned, Day End Processing expenses the costs or prorates them to the remaining items on the original receipt. You can check the prorated amounts on the Return Posting Journal.

- Also deletes completed returns if you do not keep history and, if you keep history and statistics, updates Purchase Orders and Inventory Control history and statistics with return data.
Editing Returns

If you change return quantities or return costs, Inventory Control item quantities are updated with the changes, and Day End Processing creates new general ledger transactions to reflect the changes.

Job-related changes to returned quantities will change the actual quantities and costs in Project and Job Costing.
Entering Returns

You can enter returns with or without referencing particular receipt numbers. For more information, see:

- Entering returns for existing receipts
- Entering returns for non-existing receipts
- Entering units for job-related returns
Exporting Returns

Use the Export command on the File menu in the Return Entry form to transfer return transactions created in Purchase Orders to non-Sage ERP Accpac applications, or to a file to be edited and imported later.

Before exporting, decide which fields to include in the export file. You must select fields for each type of record used for returns. You should also find out the path for the export file you want to use or create.

When you choose Export, Purchase Orders exports all the posted returns currently in the system. If you do not want to export everything, use the Set Criteria option to specify the returns to export.
Posting Returns

When you post a return, item quantities on hand are immediately reduced in Inventory Control. If you use the automatic-numbering option, posting also assigns the return number.

If the return is job-related, Purchase Orders also updates the actual quantities and costs for the job in Project and Job Costing.
Using Security with Returns

You can use security with the Return Entry form, separately specifying the persons who can add and edit returns, print returns, import returns, and export returns.

For more information about using security, see Purchase Orders security.

Return Entry Form – overview
Creating Purchase Orders from Requisitions

Using the Create POs From Requisitions form, you can specify ranges of requisition numbers, dates, and vendor numbers for which to automatically create purchase orders. You can create purchase orders for requisition details that do not have vendor numbers, assigning the vendors either by creating purchase orders for only one vendor number or by selecting a vendor type used with items in Inventory Control.

Optional Fields. When you create a purchase order from more than one requisition, the fields on the Optional Fields tab will be taken from the first requisition that you select.

Purchase orders created by vendor type. You can create purchase orders by vendor type. The following example describes the purchase order details that are created when a vendor type is specified.

Assume purchase orders will be created from the following requisition details, and that details with blank vendor numbers are selected for vendors who are Vendor1 in the item records:

<table>
<thead>
<tr>
<th>Line Number</th>
<th>Item Number</th>
<th>Vendor Number</th>
<th>Vendor 1 in Item Record</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>A1-103/0</td>
<td>Blank</td>
<td>1200</td>
</tr>
<tr>
<td>2</td>
<td>A1-400/0</td>
<td>Blank</td>
<td>1400</td>
</tr>
<tr>
<td>3</td>
<td>A1-401/0</td>
<td>Blank</td>
<td>1350</td>
</tr>
<tr>
<td>4</td>
<td>A1-650/0</td>
<td>1200</td>
<td>1500</td>
</tr>
</tbody>
</table>

These details would create three purchase orders, one each for vendors 1200, 1400, and 1350.

The purchase order for vendor 1200 would include two item details because vendor 1200 is assigned in the item record as the selected vendor type for line 1, and specified as the vendor number for line 4.

Note: You cannot mix job-related and non-job-related requisitions when creating purchase orders. If you use Project and Job Costing and are creating POs from both types of requisitions, you must run this function twice.
For more information, choose:

Consolidating requisition details on purchase orders
Posting purchase orders created from requisitions

Determining the Quantity to Order

This topic contains an example to demonstrate how to choose the Reorder Quantity option that will order the number of items you need.

For example, assume you are reordering an item for which the Reorder Quantities form shows the following figures:

- Minimum quantity = 10
- Projected sales = 25
- Maximum quantity = 30
- Reorder quantity = 10
- Quantity on hand = -13

You can order up to the maximum quantity or projected sales (for the period), or over the maximum quantity or projected sales, as follows:

- To order up to, but not exceeding, the maximum quantity, you would order 40 stocking units (4 x 10) bringing the on-hand quantity to 27. (Choose the Up To Maximum option.)

- To order up to at least the maximum quantity, you would order 50 stocking units (5 x 10) bringing the on-hand quantity to 37. (Choose the Above Maximum option.)

- To order up to, but not exceeding, the projected sales quantity for the number of days in the period (selected by the run date), you would order 30 stocking units (3 x 10) bringing the on-hand quantity to 17. (Choose the Up To Projected Sales option.)

- To order up to at least the projected sales quantity for the period, you would order 40 stocking units (4 x 10) bringing the on-hand quantity to 27. (Choose the Above Projected Sales option.)

### Purchase History Document Details form

<table>
<thead>
<tr>
<th>Contract, Project, and Category</th>
<th>Days to Receive</th>
<th>Document Number</th>
<th>Extended Cost</th>
<th>Item Number and Description</th>
<th>Vendor Number and Name</th>
<th>Location</th>
<th>Quantity</th>
<th>Transaction Date</th>
<th>Transaction Type</th>
<th>Unit of Measure</th>
<th>Year and Period</th>
</tr>
</thead>
</table>
Use this form to check and edit the details of transactions posted for the selected vendor or item number in the year and period you specified.

Information includes the year and period, transaction type and date, document number, quantity, unit of measure, cost, and number of days between the time you issued the purchase order and posted the receipt.

If working with transactions that include serialized and lotted items, you can click Serial/Lot Numbers to display the numbers.

**To open the Detail form**

- Select a transaction line in the Purchase History form, then press F9 or click the Details button, or
- Press the Alt + D keys.

Click the Close button or press the F9 key in the detail form to return to the main Purchase History form.

Go back to the [Purchase History form](#).
Accumulate Purchase History

Use the Accumulate Purchase History option to keep information about the items you have purchased and the vendors who supplied them. The option also keeps information about invoices, credit notes, debit notes, and items you returned.

You can view the information in the Purchase History form, use the History button to look it up when you are entering transactions, and print it on the Purchase History report.

Purchase Orders keeps purchase history by the type of year (fiscal or calendar) and period you select for the Accumulate By and Period Type options on the Processing tab of the Options form.

If you choose to accumulate by calendar year, the starting date for the year will be January 1. If you accumulate by fiscal year, the starting date will be the first day of your fiscal year.

You can turn on or turn off the Accumulate Purchase History option at any time. If you turn off the option after you have used it, Purchase Orders keeps the figures already accumulated until you clear them. If you turn on the option again before clearing the history you accumulated previously, the data will still be available, but there will be no figures for the period during which the option was off.
Purchase Statistics Field List

- Average Credit Note/Debit Note
- Average Invoice

- Smallest Credit Note/Debit Note
- Smallest Invoice
- Vendor (with largest credit note/debit note)
- Vendor (with largest invoice)
- Vendor (with smallest credit note/debit note)
- Vendor (with smallest invoice)
- Year
Accumulate Statistics

Select this option if you want to accumulate statistics from posted transactions.

When you use the option, Purchase Orders retains statistics from the transactions processed for up to 53 periods per year (54 periods in leap years), for any number of years. The program displays these statistics in the Purchase Statistics form and prints them on the Purchase Statistics report.

You can turn on or turn off the Accumulate Statistics option at any time. If you turn off the option after you have used it, Purchase Orders keeps the statistics already accumulated until you clear them using the Clear History form. If you turn on the option again before clearing the statistics you accumulated previously, those statistics will still be available, but there will be no statistics for the period during which the option was off.

Tasks Performed by Day End Processing

**Note:** Most Day End Processing tasks will be performed during posting if you choose the option to cost inventory items during posting.

Unless you cost inventory during posting, Day End Processing performs the following tasks:

- Activates and posts future purchase orders that have reached their activation dates.

**Tip.** If you usually run Day End Processing at the end of the work day, future purchase orders set to be activated on a certain day will not become active until the end of the day. To be sure a future purchase order is ready to be processed on the correct date, assign a date that is one or more days earlier than the desired date for the purchase order.

- Deletes requisitions with expiration dates on or before the session date for day-end processing.

- Unless you update costs during transaction posting, Day End Processing calculates unit costs for each item on a receipt or return (or on an invoice, credit note, or debit note where costs change), using the item’s costing method if you use Inventory Control.

- Updates costing information if you use Inventory Control (unless you update costs during transaction posting).

- Updates statistics and history in both Inventory Control and Purchase Orders, if you selected the options to keep this data in both programs.

- Deletes completed transaction details if you do not keep transaction history.

- Creates a batch of Accounts Payable invoices, credit notes, and debit notes from posted Purchase Orders transactions.

- Creates posting journals for the receipts, returns, invoices, credit notes, and debit notes posted in Purchase Orders since the last time you ran Day End Processing.

- Creates general ledger transactions from posted receipts returns,
invoices, credit notes, and debit notes (unless you update costs during transaction posting).

General ledger transactions from invoices, credit notes, and debit notes are created by Accounts Payable when it posts batches.

- Updates actual and committed costs in Project and Job Costing with amounts from job-related receipts, invoices, returns, and credit and debit notes.

- Updates the Next Day End Number field in the Purchase Orders Options form.
Purchase Orders Reports

Purchase Orders Reports are divided into two categories:

- Reports provide you with order status information, statistics, transaction information, and basic setup record information.
- Forms include requisitions, purchase orders, receiving slips, returns, and mailing labels.

If you have a multicurrency ledger, some of these reports can also include source and functional-currency (home-currency) information.

Crystal Reports

All reports in Purchase Orders use Crystal Reports and have the extension RPT. You can:

- Modify any report using Crystal Reports or Crystal Enterprise (both from Business Objects).
- View previous tabs in the Print Preview form without having to restart the report.
- Attach reports to an e-mail using the E-mail print destination in System Manager.
- Use Crystal Enterprise to print scheduling in the Enterprise Series of Sage ERP Accpac (if you install Crystal Enterprise).
- Export reports (for the Print Preview form) to a large number of formats, including:
  - Comma-Separated Values (CSV)
  - Data Interchange Format
  - Excel 2.1, 3.0, 4.1, and 5.0
  - HTML
  - Lotus 1-2-3
  - ODBC
  - Text
  - Paginated test
  - Columnar text
  - Rich Text Format (RTF)
  - Word for Windows
  - Lotus Notes
- Microsoft Mail

Modifying forms

If you want to modify or create forms using Crystal Reports, you must
install Crystal Reports. Follow the details in the online document, “Customizing Printed Forms” (available from the Help menu on the Sage ERP Accpac desktop).
Clear History Field List

For help about the options and fields in the Clear History form, select from these field names:

- Credit/Debit Notes/To
- From/To
- Invoices
- Payables Clearing Audit
- Period
- Printed Posting Journals
- Purchase Statistics
- Purchasing History
- Receipts
- Returns
- Select By
- Through
- Through Day End Number
- Through Year
- Transaction History
Post A/P Batches

Specify when to post A/P batches generated from Purchase Orders invoices, credit notes and debit notes:

  • During Posting or Day End Processing
  • On Request Using Create Batch Icon

During Posting or Day End Processing

This option lets you post Accounts Payable invoice batches created by Purchase Orders when you post invoices or when you run day end processing in Inventory Control (if you have it) — depending on when you cost transactions in Inventory Control.

You choose when to cost transactions with the Cost Items During option on the Processing tab of the I/C Options form. The Cost Items During option gives you two choices:

  • During Posting
  • Day End Processing

Note: These choices can have a large impact on the speed of processing transactions in Purchase Orders and on the number of A/P batches that Purchase Orders produces.

If you post A/P batches during transaction posting, Purchase Orders will create and post an A/P batch for each invoice it creates.

If you are processing a large volume of receipts, you should cost inventory during day end processing or use the Create Batch icon to post A/P batches.

On Request Using Create Batch Icon

This option lets you decide when to post Accounts Payable invoice batches created by Purchase Orders. Use the Create Batch form in Purchase Orders and select the option to Post A/P Batches.

If you wish, you can also post the A/P batches created by Purchase Orders using the Post Batch form in the Accounts Payable module.

You can change your selection any time. If you were using the Create
Batch form to create the transactions, print a copy of the latest G/L Transactions report, and then create any outstanding transactions *before* changing your choice for the option.
Delete Inactive Records Form (stand-alone program) Field List

For help about the options and fields in the Delete Inactive Records form, select from these field names:

- Delete Inactive Items From/To
- Delete Inactive Account Sets From/To
- Inactive Dates From/To
The Account Sets report lists descriptions and numbers of the general ledger accounts in your Purchase Orders account sets.

The report lists, for each account set,

- The account numbers for the Payables Clearing and Inventory/Expense accounts.
- The date on which the account set was last edited (Last Maintained).
- The date the account set became inactive. The date appears in the Inactive On column.

For instructions on printing the report, see Account Sets report — printing.

Purchase Orders reports
Additional Cost Codes Report — Features

The Additional Cost Codes report lists the information entered to define each of the additional cost codes used in your Purchase Orders system. (Additional costs are extra charges, such as for shipping and handling, that are entered separately from the costs of the items you purchase, then prorated to item costs, if you wish.)

- If you list the costs by vendor number, additional costs entered without vendor numbers appear first.
- The report lists each cost's default amount and proration and reproration methods. You can change this information when you enter the cost on a new transaction.
- When you edit an additional cost or make it inactive, the dates are listed in the Last Maintained/Inactive On column.
- The multicurrency report shows the currency for the cost.

For instructions on printing the report, see Additional Cost Codes report — printing.

Purchase Orders Reports
Items Report (stand-alone program) — Features

Use the Items report to print the information entered for each item in the Items form, for example when you need a quick reference list of item information or after adding, deleting, or changing item records.

Depending on your selections, the report can list the following information:

- Information entered on the Item Information tab of the Items form.
- Text entered in the Comment fields on the Item Information tab.
- All defined units of measure, as entered on the Item Units tab, and the corresponding conversion factors for each unit.
- The authorities and other tax information entered on the Item Tax Classes tab.
- Optional field information entered on the Optional Fields tab.
- Item vendor information from the Vendor Details form, including vendor type, vendor number, vendor name, and vendor item number.

For instructions on printing the report, see Items report — printing

Purchase Orders reports
Optional Fields in Additional Cost Records

Optional fields are fields that have been added by your company to the records or transactions in purchase orders. You must have Sage ERP Accpac’s Transaction Analysis and Optional Field Creator to add and use optional fields.

If Optional Fields appear on the Additional Costs form, you can click the Zoom button (Zoom button) to display the optional fields that have been assigned to additional costs, and edit their contents.

If you assign the same optional fields to additional cost records and to invoice additional costs, the optional field entries in additional cost records will appear on invoice additional cost details by default.

Optional field information can pass from invoices (or credit/debit notes) to downstream ledgers like Accounts Payable and General Ledger.
Options Report — Features

The Options report lists the information you entered and the options you selected when you set up your Purchase Orders system, or when you changed the information using the Options form.

For instructions on printing the report, see Options report — printing.
Information printed on the report

The report lists:

- The company address, and the Purchase Orders contact person and telephone number.
- In multicurrency ledgers, the functional (home) currency and the default exchange rate type.
- Processing options specified in the options form:
  - Whether you allow entry of non-inventory item numbers with Purchase Orders transactions.
  - Whether you keep transaction history.
  - The default template you use for entering new orders.
  - The default item cost you use when displaying item costs in transactions.
  - Whether and how you accumulate purchase statistics.
  - Whether and how you accumulate purchase history.
  - The number of days in the default aging periods for the Aged Purchase Orders report.
- The size, prefix, and next number to assign as the document number for requisitions, purchase orders, receipts, and returns.
- How you process general ledger transactions for your Purchase Orders system, as well as the default inventory expense account, default cost expense account, and non-inventory payables clearing account you use.

See also

Purchase Orders reports
Ship-Via Codes Report — Features

This report lists the ship-via codes that are defined in Purchase Orders. Ship-via codes are specified on requisitions, purchase orders, receipts, and returns to identify the shipping method or carrier by which your vendors ship goods to you or which you will use to return goods to vendors (for example, courier, air mail, parcel post).

For instructions on printing the report, see Ship-Via Codes report — printing.

Information printed on the report

- Ship-via codes and descriptions.
- Names, addresses, telephone numbers, and contacts for all listed ship-via codes.

See also

Purchase Orders reports
Templates Report — Features

The Templates report lists the information entered to define the templates that are used in your Purchase Orders system.

For instructions on printing the report, see Templates report — printing.

Information printed on the report

- Template codes and descriptions.
- The information entered and selections made to define the templates.

See also

Purchase Orders reports
Vendor Contract Costs Report — Features

The Vendor Contract Costs report lists the vendors from whom you purchase items and the costs of the items that each supplies.

**Note:**

- The report includes only the item costs that you have entered using the Vendor Contract Costs report.
- The Vendor Contract Cost report uses the Rate Type specified for the vendor.

Purchase Order lets you specify the following vendors’ prices for inventory items:

- Base unit costs for single or multiple units of measure.
- Sale unit costs for single or multiple units of measure.
- Volume discount amounts or percentages.
- Tax authorities and tax statuses for the contract cost.

The order in which information appears on the report depends on your sorting selection — either the item number or the vendor number.

For instructions on printing the report, see [Vendor Contact Costs report — printing](#).

**See also**

[Purchase Orders reports](#)
Vendor Details Report (stand-alone program) — Features

The Vendor Details report lists vendors from whom you purchase items and the items each supplies. The report includes only the vendors you have assigned to item numbers on the Item Vendors tab of the Items form.

The order in which information appears on the report depends on your sorting selection. The Vendor Details report lists:

- The number you assign to identify a vendor in Accounts Payable.
- The number you use to identify an item in Purchase Orders.
- A number you assign to the vendor (vendor type) in the vendor details record, usually to identify vendors from whom you most frequently order the item.

For instructions on printing the report, see Vendor Details report — printing.

Purchase Orders reports
Weight Units of Measure Report — Features

The Weight Units of Measure report lists the information entered to define the inventory weight units of measure used in your Purchase Orders system (if you do not use the Inventory Control module).

For instructions on printing the report, see Printing the Weight Units of Measure Report.

Information printed on the report

• The report lists the weight units of measure along with their descriptions and weight conversion factors. It also identifies the default weight unit of measure.

See also

Purchase Orders reports
Requisitions — Features

A printed requisition is a detailed list of the items you want to include on the purchase order you plan to issue from the requisition. The form can also list the vendors from whom you plan to purchase the items.

Purchase Orders provides two standard 8½-inch by 11-inch or A4 requisition layouts that you can use as is or change to suit your needs using Sage Accpac’s report designer.

For instructions on printing requisitions, see Requisitions — printing.

Contents — Purchase Orders provides three standard 8½-inch by 11-inch or A4 requisition layouts (PORQN01.RPT for printing on blank paper, PORQN02.RPT for preprinted forms, and PORQN03.RPT, an alternative format for printing on blank paper that includes optional fields).

Creating requisition formats — You can adapt the format for requisitions or create your own requisition format using Sage ERP Accpac's report designer. (Refer to the online document "Customizing Printed Forms with Crystal Reports" for information.)

See also

Purchase Orders reports
Purchase Orders — Features

A purchase order is a detailed list of the items you plan to purchase from a particular vendor you selected for the purchase order.

The Purchase Orders program provides four standard 8½-inch by 11-inch or A4 purchase order report layouts (including two formats for preprinted forms) and one default e-mail message that you can use for POs.

You can either use one of the purchase order reports or the e-mail message that comes with the program, adapt it to your needs, or design your own.

For instructions on printing purchase orders, see Purchase orders — printing.
Contents

Printed forms — Purchase Orders provides four standard 8½-inch by 11-inch or A4 purchase order layouts (POPOR01.RPT and POPOR04.RPT for printing on blank paper, and POPOR02.RET and POPOR05.RPT for preprinted forms). POPOR04.RPT and POPOR05.RPT are non-datapiiped for greater flexibility.

You can adapt the format for purchase orders or create your own purchase order format using the report designer.

Creating purchase orders e-mail formats — You can use the E-mail Messages form in the Setup folder to create e-mail messages for sending purchase orders and returns. Within the e-mail message, you can include codes for adding information specific to the vendor or specific to your company. Each e-mail message is identified by a unique 16-character message ID code.

See E-mail Message Information Codes.

Printing drop-ship addresses. If the purchase order includes drop-ship addresses, all details with the same drop-ship address are printed together on the purchase order, followed by the address, rather than printing an address with each detail line that uses it.

See also

Purchase Orders reports
Receiving Slips — Features

A receiving slip is a detailed list of the items you received from vendors and any additional costs posted with the receipt. Purchase Orders provides four standard 8½-inch by 11-inch or A4 receiving slip layouts that you can use as is or change to suit your needs using Sage ERP Accpac's report designer.

For instructions on printing receiving slips, see Receiving slips — printing.

Contents

Purchase Orders provides four standard 8½-inch by 11-inch or A4 receiving slip layouts (PORCP01.RPT and PORCP03.RPT for printing on blank paper, and PORCP02.RPT AND PORCP04.RPT for preprinted forms). PORCP03.RPT and PORCP04.RPT show the quantities received.

Note: Pre-printed forms PORCP03.RPT and PORCP04.RPT also print cost information. If you want to hide costs on these forms, you will need to customize them.

Creating receiving slip formats — You can adapt the formats for receiving slips or create your own receiving slip format using the report designer.

See also

Purchase Orders reports
Returns — Features

A purchase return is a detailed list of the items you are returning to a vendor. Purchase Orders provides two standard 8½-inch by 11-inch or A4 reports for printing returns and one default return e-mail.

You can either use one of the purchase order report or e-mail message formats that comes with the program, adapt it to your needs, or design your own.

For instructions on printing returns, see Returns — printing.

Contents of returns — Purchase Orders provides two standard 8½-inch by 11-inch or A4 return layouts (PORET01.RPT for printing on blank paper, and PORET02.RPT for preprinted forms).

Creating return print formats — You can adapt the formats for returns or create your own return format. (Refer to the online document customizing printed forms in the System ManagerHelp).

Creating purchase return e-mail formats — You can use the E-mail Messages form in the Setup folder to create e-mail messages for sending purchase orders and returns. Within the e-mail message, you can include codes for adding information specific to the vendor or specific to your company. Each e-mail message is identified by a unique 16-character message ID code.

See E-mail Message Information Codes.

Purchase Orders reports
Drop-Down Lists and Calendars

Drop-down lists and drop-down calendars are used throughout Sage ERP Accpac programs.

Click the down arrow to have the program display a list or a drop-down calendar from which you can choose an option or a date.

You can also:

- Tab to the list field and press the down arrow to scroll through list choices, or
- Tab to the list field and press Alt+down arrow to display the list or a calendar.
Mailing Labels — Features

You can print mailing labels to attach to envelopes in which you are mailing documents to vendors and to shipments you are returning to vendors. You can either use the label format that comes with Purchase Orders, adapt it to your needs, or design your own.

For instructions on printing mailing labels, see Mailing labels — printing.

Contents — Purchase Orders comes with two label formats that print labels on an 8.5 x 11 page. POLABEL.RPT prints 12 labels [2-up] and POLABELP.RPT prints 14.

Creating label formats — You can change the format for mailing labels to suit your needs, or you can create your own labels. (Refer to the online document "Customizing Printed Forms with Cyrstal Reports" for information.)

Purchase Orders reports
Aged Purchase Orders Report — Features

Use the report to quickly spot purchase orders that have been outstanding for a long time, and that may require action.

For instructions on printing the report, see Aged Purchase Orders report — printing.
Information printed on the report

The Aged Purchase Orders report compares the Aged As Of dates to the order dates to determine the aging category to which each order belongs.

The report contains the following:

- The Aged As Of date which determines the aging period to which each purchase order belongs.
- The subtotal for the current period and each aging period, and the grand total of all aged purchase orders.
- The amount of purchase orders for each period, expressed as a percentage of the grand total (single-currency ledgers only). (Shows where the bulk of aged purchase orders occurs.)
- Amounts in the functional or vendor currency (multicurrency ledgers).
- Report subtotals and, in multicurrency ledgers, a grand total for each currency.

Purchase Orders reports
G/L Transactions Report — Features

The G/L Transactions report is a list of the general ledger journal entries created from all transactions posted in Purchase Orders since the last time you created the general ledger batch.

For instructions on printing the report, see G/L Transactions report — printing.
Information printed on the report

The Detail report includes, for each transaction:

- The posting sequence number, which is the number of the day-end processing run when the transaction was created.
- The Batch-Entry column is blank because Purchase Orders does not use batches.
- The source code that identifies the source program (Purchase Orders) and the type of transaction in your general ledger. Purchase Orders source codes are:
  - PO-CO — consolidated transactions
  - PO-CR — credit notes
  - PO-DB — debit notes
  - PO-IN — invoices
  - PO-RA — adjustments to receipts
  - PO-RT — returns
- The Reference and Description columns contain the data specified by your selections for the G/L Reference Field and G/L Description Field options (document number, source code/day end number/entry number, description, reference, vendor number, vendor name, PO number) in the Options form. The sample data uses the document number and the header description for these options.
- Totals by account number. You can also sort the report and see totals by fiscal year and period.
- The debit and credit totals of the transactions on the report.

The Summary G/L Transactions report lists a single line for each general ledger account number, with the total debit and credit amount for the account.

*Purchase Orders reports*
The Item Transaction History report lists all transactions posted for the items assigned to the account sets and period that you select for the report.

The Item Transaction History report shows the following information for each item:

- The date, fiscal year, and fiscal period of each transaction.
- The document number entered with the transaction.
- Day-end numbers, assigned sequentially each time Day End Processing is run, and entry numbers indicating the order in which each transaction was processed by Day End Processing.
- If you use multicurrency ledgers, the source currency and exchange rate for each transaction.
- The amount of the transaction in source currency. Amounts that credit the Inventory/Expense account (such as returns) are displayed according to your Windows settings (for example, with a leading minus sign or in parentheses).
- Debit or credit amounts for each transaction to be posted to the account set's Inventory/Expense account. In multicurrency ledgers, these amounts are in functional currency.
- For each account set, the net change posted to the Inventory/Expense account from all transactions posted for the item.
- Additional cost amounts are included on the report only if they have been prorated for the item.

For instructions on printing the report, see Item Transaction History report — printing.

Purchase Orders reports
Payables Clearing Audit List — Features

This report lists the debits and credits posted to the Payables Clearing account and processed by the Day End Processing function. It includes receipts, invoices, returns, credit notes, and debit notes.

Data for the report includes everything back to the year and period from which you keep history. If you do not keep history, the report prints only transactions created by the last time you ran Day End Processing.

For more information on the contents of this report, see Payables Clearing Audit list — printing.
Information printed on the report

The report shows the account sets, fiscal years, and periods you choose and, if you have a multicurrency ledger, it also reports in the currency you choose.

1. In a multicurrency ledger, the report shows whether you chose the functional currency or a combination of the functional and source currencies. When you choose to print the report in source and functional currency, a Currency heading appears. The currencies are listed under each account set and the vendors are grouped by the currency they use.

2. The details of the transaction are shown, including the vendor numbers and names.

3. The report shows the amount debited or credited to the account for each receipt, invoice, return, debit note, and credit note transaction.

4. The report shows the total debits and credits by period and the total for each account set (AVG. in the example) during the time specified for the report.

If you have a multicurrency system and include source currencies for the report, there are also totals for each currency.

Purchase Orders reports
The Receipts, Return, Invoice, and Credit/Debit Note Posting Journals are part of your Purchase Orders audit trail. The journals contain the detailed record of the general ledger transactions arising from the receipts, invoices, returns, credit notes, and debit notes that you posted in Purchase Orders.

In multicurrency systems, posting journals list the vendor's currency code for each transaction, along with the exchange rate, rate type, and rate date. The journals include amounts in both the vendor's currency and the functional currency.

Note that return posting journals and credit note posting journals display numbers as negative amounts. (This applied to quantities, extended amounts, prorated additional costs, tax summary amounts, retained amounts, and job expensed amounts.) For example, if you post a return of 5 items, the return posting journal will display a quantity of "-5." If you later adjust the return to 2 items, the Return Posting Journal will show a +3 to record the change in quantity.
Information printed on posting journals

- On the Receipts Posting Journal, the additional cost amount prorated to each item detail.

- Details of each transaction of the selected type. (You can list transactions by day end number, transaction date, vendor number, or transaction number.)

- On the Receipts Posting Journal, the secondary (additional cost) vendor, description, amount, tax, and proration information. (Select the Include Additional Costs option to include this section).

- Tax information for the document. (Select the Include Tax Summary option to include this section.)

- Job-related information if you have Project and Job Costing.

- Serial and lot numbers for applicable items. (Select the Include Serial/Lot Numbers checkbox to include.)

- Optional field information if you use Optional Fields.

- On multicurrency reports, the totals for the journal in both functional and source (vendor) currencies.

- A General Ledger Distribution Summary, which includes the debit and credit totals for each account affected by the transactions on the journal. The multicurrency version of the summary lists totals in both functional and source (vendor) currencies.

For instructions on printing the report, see Posting journals — printing.

Purchase Orders reports
Purchase History Report — Features

This report provides summary or detailed purchase information by vendor or inventory item. You can use the report as a purchases journal, to record purchases by vendor or item, and to indicate the strengths and weaknesses in company purchasing history.

For instructions on printing the report, see Purchase History report — printing.
Information printed on the report

- Transactions can be listed by vendor number or item number.

- The detail report includes all item details posted for the vendor in the selected periods, and lists the year, period, transaction type, date, transaction number, location (if you use Inventory Control), quantity, cost, and unit of measure, and the number of days between the purchase order and receipt posting dates for each item detail.

- The detail report lists all purchases of an item from the vendor in the selected period, and it also lets you include job details if you use Purchase Orders with Project and Job Costing.

- The detail report can provide serial and lot numbers for applicable items if the Include Serial/Lot Numbers checkbox on the Purchase History Report window is selected. You will be prompted to enter a start and end range for serial and lot numbers you want included in the report.

- The summary report lists the year and period, total quantity received of each item (in stocking units), total cost, quantity returned, and return, credit note, and debit note totals.

- The summary report consolidates details with the same item number, year, period, and date into single details.

- The multicurrency version of the report includes each vendor's currency code. You can print amounts in the functional currency or in the vendors' currencies.

Purchase Orders reports
The Purchase Order Action report lists current purchase orders. It includes report options which allow you to produce a wide variety of reports.

For instructions on printing the report, see Purchase Order Action report — printing.

**Information printed on the report**

Depending on the options you select, the report:

- Displays the item (detail) status you selected for the report. (You can list all details, or only those details that are either completed with no receipts, completed, or incomplete.)

- Shows the currency in which amounts are listed (multicurrency systems only).

- Shows the vendor's currency (multicurrency systems only).

- Lists the amount and percentage by which received quantities differ from the quantities entered with the purchase order.

- Lists the item details on the purchase order.

- Lists job-related information entered with purchase orders (If you have Project and Job Costing).

- Includes optional field information (If you use Optional Fields).

The summary report lists the date, expected arrival date, vendor number and name, and the purchase order amount for each purchase order selected for the report. The detail report allows you to sort by Item Number and filter by Item Status.

Purchase Orders reports
Purchase Statistics Report — Features

This report lists statistics accumulated from Purchase Orders transactions since you last cleared the purchase statistics data for the period you specify. Statistics are reported for the type of year (fiscal or calendar) and period you specified for the Accumulate Statistics option in the Options form.

The report can help you understand and analyze the level of processing in your Purchase Orders system. Note that you must use the Keep Purchase Statistics option in the Options form to print this report.

For instructions on printing the report, see Purchase Statistics report — printing.
Information printed on the report

• Amounts in source (vendor) currencies (multicurrency reports).

• Source-currency code and description. The program prints a set of statistics for each source currency (multicurrency reports).

• The net purchase amount.

  (The net purchase amount does not include additional costs or taxes. All other dollar amount items on the report do include additional costs and taxes.)

Purchase Orders reports
Transaction List — Features

The Transaction Lists let you print detailed or summary listings of all current Purchase Orders transactions. You can sort transaction reports by transaction number or vendor number, and you can specify a range of transaction numbers, vendor numbers, and currency codes (if you have a multicurrency system) by which to select the transactions to report.

For instructions on printing the report, see Transaction List — printing.

Information printed on the report

Depending on the printing options you select, the report lists:

- The currencies selected for the report (multicurrency systems only).
- The optional information selected for the report.
- The serial and lot numbers when working with transactions involving serialized and/or lotted items.
- Total amount of the purchase order. In multicurrency systems, the vendor currency is identified and the total is shown in both source (vendor) and functional currencies.

The summary report includes the outstanding purchase order total, together with the numbers, dates, and totals of any receipts, invoices, returns, credit notes, and debit notes that were posted with the purchase order number.

Purchase Orders reports
Posting Purchase Orders Created from Requisitions

Posting assigns item costs based on the default item cost type in the Options form and the amount entered for the cost type in the item records (in Inventory Control, if you use it).

Posting also enters the current session date as the purchase order date, and completes the selected requisitions. The requisitions will be deleted the next time you run Day End Processing unless you keep transaction history.
Adding, Editing, or Deleting Additional Costs

Use the Additional Costs tab for both primary and secondary vendors to:

- Enter the details of the costs the vendor charged on the receipt.
- Specify whether to prorate the cost to the items on the receipt.
- Indicate how to reprorate the cost if received items are returned.

**Non-inventory items**

If you are adding additional costs for non-inventory items, you must choose No Proration. If you choose to prorate by quantity, cost, or weight, the program will display an error message and prevent you from posting the receipt.
To enter, edit, or delete additional cost details

1. On the Additional Costs tab, use the Finder or the navigation buttons to select an existing additional cost vendor for which to enter or edit an additional cost detail, or click the New button to add a new additional cost vendor.

2. When you have displayed the correct vendor in the vendor number field:
   - Enter or edit the additional cost details for the selected vendor in the detail entry grid.
   - Prorate additional cost by quantity, cost, or weight.
   - Post

   To delete a detail, select it, and then click Delete. If a message appears asking you to confirm the deletion, click Yes.

   To display all the information for a selected detail on a separate form, or to edit tax classes or the tax included fields for the detail, select the detail, then either click the Cost/Tax button or press the F9 key.

Click the links below for additional help on using the corresponding buttons:

**Entering Optional Data on Transactions**

Optional fields are company-defined fields that can be added to any of the transaction entry forms and to transaction entry detail lines if you use Sage ERP Accpac's Transaction Analysis and Optional Field Creator. The entries in these fields will flow from the requisition and purchase order to the receipt and invoice if you use the same fields for those forms.

The entries in these fields will flow from the requisition and purchase order to the receipt and invoice if you use the same fields for those forms.

The Optional Fields tab contains information that applies to the receipt as a whole, where the optional fields on detail lines apply only to the single detail line. Changing the information in any of these fields has no effect on the transaction.

If Accounts Payable invoice header and detail optional fields match Purchase Orders invoice header and detail optional fields, the optional field data will be passed automatically to Accounts Payable.

If General Ledger transaction details optional fields defined for the General Ledger accounts match the transaction header and detail optional fields defined for invoices, the optional field data can be passed automatically to General Ledger (depending on your optional fields settings).
Using Optional Fields

Purchase Orders supports Sage ERP Accpac Transaction Analysis and Optional Field Creator, a separately licensed package that lets you add optional fields to transaction documents (like purchase orders and invoices) and to each detail line of a transaction.

You can only use optional fields if you have Sage ERP Accpac's Transaction Analysis and Optional Field Creator.

You add optional fields to transaction entry forms using the Optional Fields form in the Setup folder.

If you add the same fields to all of the PO translation forms, the optional field information from one form will appear as default entries in the next form in the transaction cycle — from purchase requisitions, to purchase orders, to receipts, to invoices, and even to downstream ledgers like Accounts Payable and General Ledger — as long as you assign the same optional fields to each of the transaction forms and to the general ledger accounts.

You can also change the optional field information in each form, or change which fields appear in each form.

- Days to Receive
- Document Number
- Extended Cost
- Item Number and Description
- Vendor Number and Name
- Location
- Quantity
- Transaction Date
- Transaction Type
- Unit of Measure
- Year and Period
This topic describes how posting, day-end processing, and audit trails relate to transaction processing in Purchase Orders. The transaction types in Purchase Orders include requisitions, purchase orders, receipts, invoices, returns, credit notes, and debit notes.

**Online posting.** Purchase Orders uses *online* transaction processing rather than batch processing. This means that each transaction is posted when you choose the Post button after entering the transaction.

When you post transactions, Purchase Orders immediately updates item quantities on purchase order and on hand in Inventory Control so you always know your inventory levels.

Item costs may be updated by posting or by running Day End Processing - depending on your setting for the Inventory Control option "Cost Items During Posting or Day End Processing".

Also, depending on your I/C and P/O options, posting may add G/L transactions to new or existing batches, or they may be added during Day End Processing or, manually, using the Create Batch window.

**Job-related transactions.** For job-related transactions, posting updates committed and actual quantities and costs in Project and Job Costing. (Most updates to jobs will arise from purchase orders and receipts; however, PO will also update Project and Job Costing whenever invoices differ from the originating receipts, or if you have returns (with credit notes) and debit notes.

**Day End Processing Updates Everything Else.** You must run Day End Processing to create posting journals and update history and statistics in both Inventory Control (if you use it) and Purchase Orders (if you keep history and statistics). You may also update item costs during Day End Processing - depending on your options in Inventory Control.

Day End Processing also creates batches of Accounts Payable invoices, credit notes, and debit notes from Purchase Orders transactions, and creates general ledger transactions (if you use the option to create them during posting day end processing, and you cost items during day-end processing).
If necessary, you can run Day End Processing several times a day to keep this information more current.

**Using P/O without Inventory Control.** If you use Purchase Orders without Sage ERP Accpac Inventory Control, the program treats all items as non-stock items. It does not maintain item quantities on order or on hand, nor does it update item costs. It uses the most recent cost of an item from a vendor as the default item cost in Purchase Orders forms.

**Keeping transaction history.** If you use the Keep Transaction History option, Purchase Orders keeps transaction details until you remove them using the Clear History form. You can print reports of the data — and reprint requisitions, purchase orders, receiving slips, and returns — until you clear the transaction history for them.

If you do not keep transaction history, completed transactions are deleted when you run Day End Processing. Purchase Orders considers the following transactions to be completed:

- Requisitions and purchase orders with a Completed status (all detail lines are completed).
- Receipts for which an invoice has been posted for every vendor specified on the receipt.
- Returns for which credit notes have been posted.
- Invoices, credit notes, and debit notes (complete on posting) transferred to Accounts Payable.

If you do not keep history, you cannot display completed transactions after you run Day End Processing.

**Posting journals (the audit trail).** You can print posting journals for receipts, invoices, returns, credit notes, and debit notes after running Day End processing. You can print the journals until you delete the information for them, using the Clear History form.

See also [Transaction Lists](#) and [Posting Journals](#).
Using Optional Fields

Purchase Orders supports Sage ERP Accpac’s Transaction Analysis and Optional Field Creator, a separately licensed package that you can use with any edition of Sage ERP Accpac Advantage Series.

**Optional fields provide exceptional flexibility.** Optional fields let you customize your Purchase Orders system as much as you wish. You can use an unlimited number of optional fields to store more information with your purchase orders transactions (such as requisitions, purchase orders, receipts, and invoices).

**Note:** Like all other Sage ERP Accpac modules, Purchase Orders lets you add optional fields to transaction documents and to each detail line of a transaction. It also lets you pass optional field information through the complete transaction cycle - from purchase requisitions, to purchase orders, to receipts, to invoices, and even to downstream ledgers like Accounts Payable and General Ledger.

Optional field information can originate with vendor and item records, and flow through requisitions, purchase orders, receipts and invoices.

**Information can be transferred to A/P and G/L.** When you create invoices or general ledger transactions in Purchase Orders, the program passes the optional field values used in the transactions to Accounts Payable and to General Ledger if the optional fields in Purchase Orders are the same as the optional fields assigned in those programs. Optional field information will even appear in the General Ledger journal entries for Purchase Orders accounts, as well as in the Transaction Details Optional Fields report.

And, if the optional fields that you assign to Purchase Orders documents match the optional fields used for Accounts Payable vendors and Inventory Control items, the information entered in those programs will appear by default on transactions that you add in Purchase Orders.
Generated transactions also use optional fields. Purchase orders that are generated from requisitions, from low stock levels in Inventory Control, and from backorders in Order Entry will also include optional fields.

For more information, see Setting Up Optional Fields.

- Steps for setting up Purchase Orders
Optional Fields in Transaction Details

Optional fields are fields that have been added by your company to the detail lines in purchase orders transactions. You must have Sage ERP Accpac’s Transaction Analysis and Optional Field Creator to add and use optional fields.

If the Optional Fields column appears, you can click the column heading to display the optional fields that have been assigned to this form, and edit their contents.

Optional field information can pass through the complete transaction cycle — from purchase requisitions, to purchase orders, to receipts, to invoices, and even to downstream ledgers like Accounts Payable and General Ledger.
Adding Optional Fields to POs that Use Datapipes

You can add purchase order header and detail optional field information, as well as optional fields for vendors and inventory items, to purchase orders sent to your vendors.

The optional fields must be added to the detail sections of the purchase orders using the Crystal Reports designer.

Purchase Orders comes with four standard purchase orders forms:

- Two use datapipes (POPOR01.rpt and POPOR02.rpt).
- Datapipes are programs that extract and organize data to increase the efficiency of particular reports.
- Two read data directly from the Sage ERP Accpac database (POPOR03.rpt and POPOR04.rpt).

The datapipe for printing purchase orders allows you to extract fields from the following database tables:

- APVENO — optional fields for Accounts Payable vendors.
- POPORHO — optional fields for purchase order headers.
- ICITEMO — optional fields for inventory items.
- POPORLO — optional fields for purchase order details.

You select the optional field tables that you want to print by:

1. Setting the datapipe query parameters to "1?" in PORPT.INI (in folder \Sage ERP Accpac\PO54A).

   The purchase orders datapipe identifies the various types of details that it prints by parameters in PORPT.INI and by different LNTYPE codes. (LNTYPE is a field in the datapipe record provided to the Crystal report.)

   All optional fields are initially turned off in PORPT.INI.

2. Adding the optional fields to a new Crystal report detail section, which must have a suppression formula based on line type (see Detail LNTYPE Codes).
**Note:** The datapiped reports that ship with Purchase Orders 5.4 do not include detail sections for printing optional fields. However, they do include detail sections for printing comments/instructions. You can print purchase order optional fields and optional fields for the purchase order details by adding similar detail sections.

**Parameters in PORPT.INI**

The first step to printing optional fields is to change the optional fields parameters to "1" (true), so that the optional fields will be processes by the datapipe.

**To change the datapipe query for printing purchase orders:**

1. Open \Sage ERP Accpac\PO54A\PORPT.INI using notepad.
2. Search for \rdquo;POPOPRT.DLL.?
3. Turn off Word Wrap so the parameter numbers appear properly under the parameters.
4. Edit the following parameters:
   - **Parameter 12:**
     1 to print comments/instructions
     0 to skip comments/instructions
   - **Parameter 15:**
     1 to print vendor optional fields
     0 to skip vendor optional fields
   - **Parameter 16:**
     1 to print PO header optional fields
     0 to skip PO header optional fields
   - **Parameter 17:**
     1 to print item optional fields
     0 to skip item optional fields
   - **Parameter 18:**
1 to print PO detail optional fields
0 to skip PO detail optional fields

**Detail LNTYPE Codes**

Each detail type associated with a purchase order is identified by a particular line type code. The standard Crystal Reports purchase order forms shipped with P/O use a suppression formula to select the type of detail appearing in each detail section.

For example, the suppression formula "LNTYPE <> 1? prints purchase order header optional fields, but you could refine the formula to print only a single optional field.

The purchase orders datapipe provides six different detail line types:

- 0 — Accounts Payable vendor optional fields
- 1 — Purchase order header optional fields
- 2 — Normal purchase order details
- 3 — Inventory Control item optional fields
- 4 — Purchase order detail optional fields
- 5 — Comments / instructions

**Updating an Older Datapiped Purchase Orders Form**

If the changes that you made to previous Purchase Orders forms were minor — like the addition of a logo or a change in fonts — you might want to make exactly the same changes to the newest forms, rather than update your old forms.

To update previous forms to version 5.4, follow these steps:

1. Install the new version of Purchase Orders, ensure that the Optional Fields Conversion utility lists all optional fields (if you use them), and activate Purchase Orders 5.4.

2. Copy the custom form that you want to update from Sage ERP Accpac\PO5XX\ENG to Sage ERP Accpac\PO54A\ENG.

   **Note:** If the old form filenames are the same as your new forms, rename your old forms before copying them to the PO54A\ENG
folder.

3. Open the old report in Crystal Reports, and do a database verify.
Analytical Reports

Use the icons in the Analytical Reports folder to print reports of:

- Aged Purchase Orders
- G/L Transactions
- Item Transaction History
- Payables Clearing Audit
- Posting Journals
- Purchase History
- Purchase Order Action
- Purchase Statistics
- Shippable Backorders
- Transaction List
Use the icons in the Setup Reports folder to print reports of:

- Account Sets
- Additional Cost Codes
- E-Mail Messages
- Items (stand-alone)
- G/L Integration Report
- Optional Fields
- Options
- Ship-Via Codes
- Templates
- Vendor Contract Costs
- Vendor Details
If you presently have a computerized purchase order system, you may be able to transfer records directly into Sage ERP Accpac Purchase Orders. This process is called importing.

You can also export records from another Sage ERP Accpac Purchase Orders database, edit them in a spreadsheet or other program to change codes, amounts, and other information, then import them into the new Sage ERP Accpac Purchase Orders system you are setting up.

Purchase Orders setup records you can both import and export include:

- Additional cost codes
- Ship-via codes
- Vendor contract costs
- Templates
- E-mail messages
- Optional fields (with Transaction Analysis and Optional Field Creator module)
- Account Sets (PO standalone system)
- Items (PO standalone system)
- Vendor details (PO standalone system)
- Weight units of measure (PO standalone system)

You can also import and export requisitions, purchase orders, and receipts. You can export returns, invoices, credit notes, and debit notes.

For additional information about importing and exporting all Purchase Orders records and transactions, see the System Manager Help.

Steps for setting up Purchase Orders
Purchase Orders Documentation

Sage ERP Accpac 6.0 and 5.6 do not ship with user manuals. All the information you need to use Purchase Orders is contained in the Purchase Orders help, except as follows:

- Information about late product changes for all Sage ERP Accpac programs is contained in the Sage Accpac Readme file, which is located in the Docs folder of your install directory and also included on the installation DVD.

- Information about installing and activating Sage ERP Accpac programs is included in the Installation and Activation Guide, which you will also find in your install directory and on the installation DVD.

- Information about upgrading from earlier versions is included in the Sage ERP Accpac Update Notice, available in your install directory and on the installation DVD.

- Manuals for all version 5.5 programs are available for download from our Web site, at http://community.sageaccpac.com/resources/.

- Technical information, such as database table changes, is available for download from our Web site, at http://community.sageaccpac.com/resources/.

Please visit the Sage Online Community for additional documentation, expert's tips, user discussions, and our knowledge base.
Program features added in PO 5.4 and earlier

If you are upgrading from version 5.3 or earlier, see Changes in Purchase Orders 5.4A.

If you are upgrading from version 5.2 or earlier, see Changes in Purchase Orders 5.3.
If you are upgrading from Purchase Orders 5.2, note the following features added in Purchase Orders 5.3A and Purchase Orders 5.3B

Purchase Orders 5.3A

Purchase Orders 5.3A included two major feature enhancements that provided tighter integration throughout Sage ERP Accpac accounting modules and an increased ability to adapt Sage ERP Accpac to your requirements.

- Customize Purchase Orders with an unlimited number of optional fields for transactions and transaction details.
- Print optional field information for purchase orders, purchase order details, vendors, and items on purchase orders forms.

Purchase Orders 5.3B

Purchase Orders 5.3B added two major enhancements, along with several smaller features:

- Integration with Sage ERP Accpac Project and Job Costing.
- Retainage accounting on job-related receipts, invoices, returns, and credit and debit notes.

Other changes in Purchase Orders 5.3B

Purchase Orders version 5.3B included several other changes and features, especially when manually prorating additional costs:

- Manual proration in Purchase Order 5.3B changed, so you now enter the manually prorated amount for each detail in a Distribute Proration window.
- You can now manually prorate additional costs for invoices.
- You can manually prorate additional costs to details in the currency used by the additional cost vendor. Previous versions of Purchase Orders required proration in the functional currency.
- Purchase Orders now provides an option to directly create general ledger entries for expensed additional costs. This lets you choose when Sage ERP Accpac generates entries for expensed additional
costs during PO posting/day end or when the invoices are posted in Accounts Payable.

If you generate entries in PO, the program debits the expense account and credits the payables clearing account.

- If you are using Project and Job Costing, the optional fields for transaction details in Purchase Orders will include settings for Labor and Overhead G/L accounts and for Project and Job Costing External Cost Transactions.

- The Return Posting Journal and the Credit Note Posting Journal now display numbers as negative amounts. (This applies to quantities, extended amounts, prorated additional costs, tax summary amounts, retained amounts, and job expensed tax amounts.)

For example, if you post a return of five items, the return posting journal will display a quantity of "-5." If you later adjust the return to two items, the Return Posting Journal will show a "+3" to record the change in quantity.

See also

New Features in Purchase Orders 5.5
Features Added in Purchase Orders 5.4
Consolidation Settings in P/O 5.4 (compared to "Do Not Consolidate? in Purchase Orders 5.2 and earlier"
Integration with Project and Job Costing

If you use Project and Job Costing, Purchase Orders lets you track committed and actual quantities and costs by contract, project, category, and, on standard contracts, resource.

**Note:** If you want to track quantities and costs for non-materials categories (such as equipment, labor, or subcontractors), you should select the Allow Non-Inventory Items option on the Purchase Orders Options Processing tab.

Purchase Orders lets you enter job information with each detail on all job-related transactions. To track quantities and costs, select the Job Related check box when entering requisitions, purchase orders, and receipts.

When you enter an invoice or a return for a job-related receipt, or when you adjust a job-related document using a credit note or a debit note, the Job Related check box is selected for you, and the job-related details from the original document appear.

When you process job-related purchase orders, receipts, and invoices from job-related purchase orders, the program updates committed quantities and costs in Project and Job Costing. When you process job-related receipts, invoices, returns, credit notes, and debit notes, the program updates actual quantities and costs.

**Note:** You must receive goods using the same units of measure that are used in the estimates in Project and Job Costing. Purchase Orders does not convert the different units of measure when it updates PJC.

When you invoice received goods in Purchase Orders, the program sends job-related invoices to Accounts Payable.

**Optional field information updates Project and Job Costing**

Optional field information from purchase order details, receipt details, receipt additional cost details, invoice details, invoice additional cost details, credit/debit note details, and credit/debit note additional cost details also flow from Purchase Orders to Project and Job Costing.
external cost transactions if the detail optional fields are the same in both programs.

**Committed Costs Audit in Project and Job Costing**

The Project and Job Costing module includes a Committed Costs Audit list that shows which purchase orders, receipts, and invoices from job-related purchase orders updated committed costs in Project and Job Costing.

This report helps you reconcile committed costs outstanding on purchase orders to committed quantities reported for contracts, projects, and categories.

The report is updated by Day End Processing and cleared using the Clear History form.

Retainage Accounting for Job-Related Receipts and Invoices

If you use retainage accounting in Accounts Payable, you can specify retainage options for job-related transactions in Purchase Orders.

When you select the retainage accounting option on a job-related receipt, invoice, credit note, or debit note, the program displays:

- Retainage fields for each detail line, letting you enter a different retainage percentage or retainage amount and retention period for each detail line in the document. (By default, these settings come either from the vendor record or from the category to which you assign the cost.)
- A Retainage tab, where you specify retainage terms and, in a multicurrency system, the type of exchange rate to be used when you process outstanding retainage.

Reporting Tax on Retainage Documents

Sage ERP Accpac lets you specify when to report tax on retainage amounts to meet the requirements of your tax jurisdictions.

For example, in Canada, you report the GST for a retained amount when you issue the retainage invoice.

You can choose from three options when you set up Tax Authorities in Tax Services:

- No Reporting
- At Time of Retainage Document
- At Time of Original Document
"Use Custom Form" Check box for Purchase Orders and Returns

The report selection window for printing purchase orders and returns contains a new checkbox, Use Custom Form, that was added to increase record selection efficiency when printing purchase orders and returns.

- **If the box is unchecked**, the report selection window creates a report selection formula and passes it to the Crystal Reports runtime.

- **If the box is checked**, the report selection window will **not** pass the selection formula to the Crystal Reports runtime. You must define all selection criteria within the Crystal report form.

If you have created a custom form that uses different report selection criteria than the forms shipped with Purchase Orders, you may have to check Use Custom Form in order to print your forms properly.
Create G/L Transactions By

Purchase Orders lets you choose whether to add new general ledger transactions to new batches or create new batches and optionally post them automatically to the general ledger.

Specifically, you can choose to:

- Add general ledger transactions to an existing Sage ERP Accpac General Ledger batch.
- Create a new General Ledger batch each time you generate G/L transactions.
- Create a new General Ledger batch each time you generate G/L transactions, and automatically post the batch in the General Ledger program.

**Note:** Remember to create and post G/L batches for outstanding transactions before locking periods for General Ledger.

**To create only one batch**

To have only one General Ledger batch to which all transactions are appended, select the Adding To An Existing Batch option. Purchase Orders must use the same database as Sage ERP Accpac General Ledger.

**If you don’t use Sage ERP Accpac G/L**

If you do not use Sage ERP Accpac General Ledger — or if your Sage ERP Accpac General Ledger system is at another location — Purchase Orders appends its general ledger transactions to a file in your company’s data directory called pgltran.csv, which can be imported by a remote site Sage ERP Accpac General Ledger, or transferred to another general ledger that you use. The file is in a Comma Separated Values (CSV) format.
This feature allows you to report taxes in a currency that is not the vendor currency or the functional currency. (This can be a requirement in some jurisdictions.)

The Tax Reporting currency fields appear on purchase orders, receipts, invoices, returns, credit notes, and debit notes *only if* the tax reporting currency for one or more of the tax group authorities is different from your functional currency and the vendor's currency.

**Taxes are set up in Common Services**

You set the tax reporting currency for taxes in the Tax Services module in Common Services.

**You can change the tax reporting currency amounts in transactions**

You can change the total tax reporting amount on the Taxes tab during transaction entry (along with the total tax amount). If you do change the tax reporting amount, you can use the Derive button on the Rates tab to derive the effective tax reporting exchange rate.
Create G/L Entries for Expensed Additional Costs

This choice lets you update your general ledger with additional cost expenses directly from Purchase Orders, or wait until invoices are posted in Accounts Payable.

Select this option to create debit entries to expense accounts and credit entries to the Expensed Additional Cost Clearing Account when you post additional costs. (Posting the invoices later in A/P will credit the payables control account and debit the Expensed Additional Cost Clearing Account.)

Leave the box unchecked to send expenses with invoices to Accounts Payable, where posting will debit the expense accounts and credit payables control.

Job-Related Additional Costs. Note that for job-related documents, Purchase Orders will always create G/L entries for expensed additional costs during posting — whether you select this option or not.
Create G/L Transactions During Posting/Day End Processing or Using the Create Batch Icon

Use the Create G/L Transactions option to specify when to generate general ledger transactions: either when you post transactions or run day-end processing or, at a later time of your choosing, using the Create G/L Batch form.

To create a batch or append to an existing batch or transaction file only when you are ready, use the On Request Using Create Batch Icon option. When you are ready to create general ledger transactions, you then use the Create Batch form. Select this option if you want to be able to consolidate general ledger transaction details and print Purchase Orders' G/L Transactions report.

You must also select On Request Using Create Batch Icon if you want to use the Consolidate G/L Batches option and to print the G/L Transactions report in Purchase Orders. (The G/L Transactions report is a listing of the general ledger transactions created by Purchase Orders that you might need to print as part of your audit trail.)

To create a batch or append to an existing batch or transaction file when you post or run day-end processing, use the During Posting or Day End Processing option. (G/L transactions will be created when you cost inventory items — that is, either during posting, or when you run Day End Processing.)

If you select the During Posting or Day End Processing option for creating the general ledger batch, you cannot print the G/L Transactions report from Purchase Orders. If you need this information for your audit control, print it from Sage ERP Accpac General Ledger. If you do not use General Ledger, you may be able to print it from the general ledger system that you are using.
Expensed Additional Cost Payables Clearing Account

This is the general ledger account that is used if you choose the option to create G/L entries for expensed additional costs in Purchase Orders.

If you create G/L entries in P/O, when you process the additional cost, Purchase Orders credits the payables clearing account and debits the expense account during day-end processing (or when you run Create Batch).

When you post the invoice in Accounts Payable, Sage ERP Accpac debits the payables clearing account and credits the payables control account.

If you do not choose the option to create G/L entries for non-inventory expenses in Purchase Orders, Sage ERP Accpac will generate G/L entries when the invoice is posted in A/P, and this account will only be used for job-related transactions.

**Job-Related Additional Costs.** Note that for job-related documents, Purchase Orders will always create G/L entries for expensed additional costs during posting — whether you select the option or not.

You can change the account number for individual transactions, as needed. You can also change the default account number in the Options form at any time.
Designing Purchase Orders Coding Schemes

This topic describes the codes you assign to the records for the optional templates, additional costs, and shipping methods you can add to Purchase Orders, and offers some tips to help you decide on the codes to use.

<table>
<thead>
<tr>
<th>Code Name</th>
<th>Maximum Length</th>
<th>Permitted Characters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional cost code</td>
<td>6</td>
<td>numbers and letters</td>
</tr>
<tr>
<td>Account set code (stand alone program)</td>
<td>6</td>
<td>numbers and letters</td>
</tr>
<tr>
<td>Item code (stand alone program)</td>
<td>24</td>
<td>alphanumeric, plus blanks and special characters</td>
</tr>
<tr>
<td>Ship-via code</td>
<td>6</td>
<td>numbers and letters</td>
</tr>
<tr>
<td>Template code</td>
<td>6</td>
<td>numbers and letters</td>
</tr>
<tr>
<td>Requisition, purchase order, receipt, or return document number</td>
<td>22</td>
<td>alphanumeric prefix, numbers</td>
</tr>
</tbody>
</table>

When you design new coding schemes, you should assign codes that make it easy to identify each record type and that list records in the order you want them to appear on reports and in Finder forms.

Each code of a single type (such as an additional cost code) must be unique. In most cases, you should also assign unique codes to all your records, so there is no chance of confusing one type of record with another.

You can use any combination of numbers and letters in all Purchase Orders codes. For example, all of the following would be valid ship-via codes:

A1
123
A01
123A
AB1234

To simplify codes, we recommend that you:

• Use the same number of characters in all codes of the same record type.

• Use codes of at least three characters, to allow for future expansion.

• Use a system that is significant for your business, such as codes that identify a geographical region, or a type of template or cost.

• If possible, use only numbers in your codes, for consistency of sorting.
Sorting Order of Codes

Purchase Orders sorts codes on screens and reports in a specific order, which you should take into consideration when designing codes.

Purchase Orders reads codes from left to right, and uses the following sequence to put them in order:

[Blank] !"#$%&'()*)+,-./0123456789:;<=>?@ABCDEFGHIJKLMNOPQRSTUVWXYZ\^_abcdefghijklmnopqrstuvwxyz{|}~

The codes listed in the introduction to this discussion would be sorted by Purchase Orders into the following order:

123
123A
A01
A1
AB1234

Codes containing fewer than the maximum number of permitted characters are left-justified in Purchase Orders Finders, forms, and on reports.
See also

Steps for setting up Purchase Orders
Set Criteria

Criteria restrict the records that are displayed in the Finder and when you use the navigation buttons. If the Finder uses criteria, the Finder might not display all records.
To check or remove the criteria

• Click the Finder, then click the Set Criteria button.
• Choose the Clear button from the form that appears.

For instructions on setting criteria, click the Help button when the Set Criteria form appears.
Allowing Entry of Non-inventory Item Numbers

All purchase order documents require item numbers and details before you can save and post the transactions. The Allow Non-inventory Items option lets you use item numbers in Purchase Orders that you have not added to your Sage ERP Accpac Inventory Control system.

Non-inventory items can include non-stock items you have not added to Inventory Control, items you plan to add to Inventory Control later, one-time purchases, services, and items needed for use in your business.

Purchase Orders does not update item quantities or other information in Inventory Control when you post transactions for non-inventory items. The general ledger entries for non-inventory details are created in Accounts Payable, so are not listed on the G/L Transactions List if you print it from Purchase Orders.

When entering details for non-inventory items, you must type an item number, using up to 24 characters (including separators), and a description of up to 60 characters. You also specify a general ledger expense account number for each non-inventory detail.

**When not to use the option.** Do not select the option if you want to enter transactions only for items that are defined in Inventory Control, so that item details posted in Purchase Orders always update item quantities and other information in Inventory Control.

**Changing your choice.** You can change your selection for this option at any time. If you change from allowing non-inventory items to not allowing them, you must edit any open purchase orders and other transactions to remove non-inventory item numbers, or add the item numbers in Inventory Control.

Return to [Selecting Processing options](#)
Assigning a Default Template Code

After setting up templates, use the Default Template Code option to specify a default template that contains the general information that you want to appear on transaction-entry forms when you start entering a new requisition, purchase order, or other type of transaction.

This option can help you speed up data entry by automatically inserting the information you use most often when entering these types of documents.

For more information, see Setting up templates.

Return to Selecting Processing options
Assigning a Default Item Cost

If you use Sage ERP Accpac Inventory Control, you can specify during setup the type of cost you want the program to use when selecting default unit cost amounts to display for the item details you enter on transactions. The option displays costs by location for the item numbers in your Inventory Control system.

You can choose to display Most Recent Cost, Standard Cost, Average Cost, Last Unit Cost, Vendor Cost, or either of the two user-defined costs you can enter with item records in Inventory Control.

If you do not use Inventory Control, Vendor Cost is set as the default item cost and you cannot change it.

When entering transaction details, you can change the cost amount that appears. You can also change your choice for the Default Item Cost option at any time.

Return to Selecting Processing options
Defining Aging Periods

Purchase Orders groups outstanding transactions for the Aged Purchase Orders report into five periods, a current (not due) period and four previous periods. You specify the length of each aging period on the Processing tab of the Purchase Orders Options form.

You can specify different periods when you are printing the report and you can change the default periods at any time.

Return to Selecting Processing options
Specifying Currency Information

The "functional currency" is the home currency in which the company books are kept.

- You select the functional currency for your Sage ERP Accpac database in the Company Profile form in Common Services when you first set up your Sage ERP Accpac system.

- You cannot change the functional currency once you have selected it.

For more information, see the System Manager Help.

The Multicurrency option for Purchase Orders is set by Accounts Payable

The Processing tab in the P/O Options form indicates whether your Purchase Orders system is multicurrency or single-currency. The setting depends on your selection in Accounts Payable. If Accounts Payable is multicurrency, Purchase Orders is multicurrency also. If Accounts Payable is single-currency, Purchase Orders is single-currency. You cannot change either of these fields.

Information about creating multicurrency records is included throughout these Help topics in discussions of records and activities affected by currency. For a summary of the steps to take to set up a multicurrency ledger, see Using multicurrency accounting in Purchase Orders.

Default rate type. If the Multicurrency option is turned on, the company's default rate type for converting source-currency amounts to functional-currency equivalents is displayed. You can select a different default rate type to use for Purchase Orders.

You can change the default rate type at any time. You can also select different rate types for individual transactions as you enter them.

The default rate type is displayed on transactions you enter for multicurrency vendors you have not yet added to Accounts Payable. You can assign another rate type for the transaction.

Return to Selecting Processing options.
Adding Job-Related Details

If you use Project and Job Costing, Purchase Orders lets you flag transactions as job-related, so you can:

- Track committed and actual quantities and costs by contract, project and category (and resource if using standard contract).
- Receive goods for a job rather than into inventory.
- Update jobs in Project and Job Costing with billing information.
- Create invoices with retainage amounts and information for Accounts Payable.

Note that if a transaction is job-related:

- All transaction details must be job-related. You cannot mix job-related details and non-job-related details in the same transaction.
- Different fields appear for the details to let you enter job-related information.
- You must specify a contract and a project for each transaction detail, and, depending on the project type, specify the project category, cost class and resource for the job. If you use different terms than "Contract," "Project," and "Category" in Project and Job Costing, the program displays those field names instead.
- If the transaction uses retainage accounting, you must specify the holdback percentage and retention period for each transaction detail. You specify the retainage rate (for a multicurrency transaction) and terms for receipts, invoices and debit/credit notes on the retainage tab.

Purchase Orders

- If the purchase order is being created from multiple requisitions, all requisitions must be either job-related or non-job-related.

Receipts and Invoices

- Receipt entries that originated with purchase orders will update the actual and committed quantities and costs in Project and Job Costing.
Invoice Entry will only send transactions to Project and Job Costing if the invoice creates an adjustment to the receipt for the quantity received, the item costs, any additional costs, or for the billing rate.

Job-related returns update actual quantities and costs for contracts in Project and Job Costing, and will also update appropriate work-in-progress (or expense) accounts.

Credit notes that apply to returns affect quantities and costs in Inventory Control and quantities in Project and Job Costing only when the credit note changes the returned quantities and costs.

Additional Costs

If you prorate additional costs manually, you can assign costs to as many different jobs as you wish.

If you prorate additional costs by cost, weight, or quantity, all item details for the transaction will be affected.

You can also allocate additional costs to several contracts by adding separate additional cost detail lines for each job and choosing no proration.

Changing Invoices after posting

Do not change job-related invoices in Accounts Payable. If you change a job-related invoice in Accounts Payable that originated with Purchase Orders, Project and Job Costing will not be updated with the transaction changes. You must process the changes in Purchase Orders, or with an Accounts Payable transaction such as an adjustment (which will update Project and Job Costing).

Accounts Payable does not update Project and Job Costing when it posts invoices that originated with Purchase Orders (because Purchase Orders has already directly updated Project and Job Costing).

Purchase Orders Security

The Purchase Orders program provides several options you can use to control access to program forms and to certain fields and tasks.

Preparing to use Purchase Orders security

Turn on security. To restrict access to Sage ERP Accpac data, you first turn on security for the system database using Database Setup.

Define security groups and assign to users. Sage ERP Accpac uses security groups to restrict user access to data.

1. Choose Security Groups in the Administrative Services form to define security groups for Purchase Orders users.

2. Select the tasks that members of each security group can perform.

3. Assign individual users to the security groups that you defined.

Assigning Purchase Orders security

Using the Security Groups form in Administrative Services, you can assign security to the following Purchase Orders forms and tasks:

- Common Inquiry
- Setup Maintenance
- Transaction Optional Fields
- Item Maintenance (stand-alone systems only)
- Cost Inquiry (in a stand-alone system)
- Transaction inquiry
- Requisition Entry
- Requisition printing
- Purchase Order Entry
- Purchase order printing
- Edit blanket PO amount
- Create Purchase Orders Automatically
- Receipt Entry
- Show Requisition/Receipt Costing Information
- Receiving slip printing
- Invoice Entry
- Edit invoiced quantity
- Edit invoiced cost
- Return Entry
- Return printing
- Credit/Debit Note Entry
- Edit credit note quantity
- Edit credit note cost
- Mailing label printing
- Import processing
- Export processing
Day End Processing (in a stand-alone system)
History clearing
Requisitions Manual Approval
Dashboard
Converting Units of Measure for Committed and Actual Quantities

You must receive goods using the same units of measure that are used in the estimates in Project and Job Costing. Purchase Orders does not convert the different units of measure when it updates PJC with quantities from receipts or invoices.

The following example show what can happen if you receive goods using different units of measure.

Assume that:

- Your estimate includes 70 items that cost $10 each.
- Shipment 1 includes 50 items, packed in 5 boxes.
- Shipment 2 includes 20 items, packed individually.

**Shipment 1**

Material Category - Item 1001 - 5 boxes (conv. factor = 10) $500

**Shipment 2**

Material Category - Item 1001 - 20 items (conv. factor = 1) $200

When Project and Job Costing is updated with the quantities and costs of these shipments, the actual quantity and cost for item 1001 will appear as follows:

Material Category - Item 1001 - Qty = 25 items, Cost = $700
Information Entered with Additional Costs

Click the Additional Costs tab on a receipt to add an additional cost.

- Use the Additional Cost Vendors browse buttons to select the primary vendor (for the receipt items) or additional cost vendors that have already been added to this transaction.

- Click the Finder button beside the Vendor Number field to add a new additional cost vendor to this receipt.

After entering the tax group, exchange rate information (for multicurrency vendors) and optional field information for the cost, enter the cost details in the grid in the middle of the form, or press F9 or click the Cost/Tax button to open the Detail Cost/Taxes form for entering additional costs.

You can add as many cost details as you need for the primary vendor and secondary vendors.

Information you enter with each additional cost detail includes:

- **Additional cost code and description** (the code you set up with the cost in the Additional Costs form; you can also omit the code then enter a description of a cost you have not added to Purchase Orders).

- **Amount** (the amount of the additional cost). The program displays the amount if an amount is specified for the additional cost code, but you can change it. If no amount is displayed, you type the amount.

  In multicurrency ledgers, the amount is shown in the format of the currency selected for the cost detail.

- **Proration method** (the method, if any, by which you apportion a cost and associated allocated taxes to received items).

  For examples and information about how costs are prorated, see Calculating prorated additional costs.

If you do not prorate an additional cost, you expense it to the general ledger account you assigned to the additional cost record or to another account you specify when entering the additional cost transaction.

If you want to prorate or expense a job-related cost to several jobs,
you must have a receipt detail for each of the jobs to which you want to apportion costs.

You can also specify retainage for job-related costs.

- **Reproration** (return proration) method (how a cost is reprorated when you enter a return to a receipt you posted previously or when you return items to which costs were prorated).

- **Optional fields** (for each detail line). If these optional fields match the Purchase Orders and Accounts Payable invoice detail optional fields, the optional field data will be passed automatically to Accounts Payable (depending on your optional fields settings).

The tax information for each additional cost detail is determined by the vendor's tax group. For each detail, you can change the tax class and specify whether tax is included in the cost amount (if allowed by the tax authority).

You can also check the tax amount for the detail and the allocated, recoverable, and expensed tax amounts. For more information, see [Editing vendor and detail tax Information](#).

**Reporting prorated amounts.** The Receipts Posting Journal lists the additional cost amounts prorated to each item on a receipt. Use the journal to check the amounts that were prorated automatically during posting or Day End Processing, and to check the amounts you prorated manually.

Go back to [Entering additional costs on receipts](#)
Specifying Vendors for Additional Costs

To add information about additional costs on a receipt, you first specify the vendor who charged the cost, then you enter the costs charged by each vendor.

You use the Additional Cost tab in the Receipt Entry form to specify the vendor information, including:

• **Vendor number and name** (the code and name of the vendor who charged you the cost).

• **Tax group** (the tax authorities, classes, and related tax information that apply to the cost). In multicurrency ledgers, the tax group you select identifies the currency in which the additional cost was charged.

• **Terms code** (identifies the payment terms the vendor allows your company).

In multicurrency ledgers, you can enter the rate type, rate date, and exchange rate for each secondary vendor. You use the Rate Information tab to edit currency rate information for a primary vendor who does not use functional currency.
Displayed information

The program displays the subtotal, tax included, and total amounts of the additional costs you enter for each vendor.

Go back to [Entering additional cost on receipts](#)
Receipt Entry Security Access

The Receipt Entry security choice for Purchase Orders (in the Security Groups form in Administrative Services) allows you to:

- Use the Receipt Entry form to view, add, edit, and post receipts.

  Users with Receipt Entry rights only can create receipts from POs, specify quantities received, and post receipts, **but they cannot see any cost information.**

  This means that receiving dock staff can fill in receipts without seeing any other accounting system information.

  You can see default item costs:
  - If you are assigned the Show Receipt Costing Information right in Purchase Orders.
  - Or
  - If you have Cost Inquiry security rights in Sage ERP Accpac Inventory Control and are entering receipts without purchase order numbers.

- Add and post invoices from the Receipt Entry form (if you have Invoice Entry security rights in Purchase Orders).

- Look up data in the Purchase History form (if you also have Transaction Inquiry security rights in Purchase Orders or Day End Processing security rights in Inventory Control or Purchase Orders [if you don't have I/C]).

- Use the Vendors forms in Sage ERP Accpac Accounts Payable to view, add, edit, and delete vendor records (if you have security rights to the forms in Accounts Payable).

- Select Sage ERP Accpac Order Entry order numbers for item details on transactions (if you have security rights to orders in Order Entry).

- View and print the Purchase Order List and the Receipt List, printed from the Transaction List form (selected from the Analytical Reports folder).

- Purchase Orders provides a security permission to "Show Receipt
Costing Information." This allows you to have warehouse staff receive goods and enter quantities received, but prevent them from viewing cost information.

**Note:** If users do not have the "Show Receipt Costing Information" security right, they will not be able to view item unit cost information on receipts — including totals, taxes, discounts, and additional cost amounts. (In other words, the Taxes tab, Additional Costs tab, and Totals tab will not appear on the Receipt Entry form for users do not have this right.)

**Also note:** Pre-printed forms PORCP03.RPT and PORCP04.RPT will print cost information. If you want to hide costs on these forms, you will need to customize them.
Receiving Slip Printing Security Access

The Receiving Slip Printing security choice for Purchase Orders (in the Security Groups form in Administrative Services) allows you to open the Receiving Slips form from the forms folder, and print receiving slips.

You can also print receiving slips from the Receipt Entry form immediately after posting them (by choosing Yes at the "Posting completed" message that appears).
Entering Invoice Header Information and Vendor Information

Header and vendor information that you enter only for invoices includes:

- **Invoice number** (up to 22 characters in length).
- **Vendor number** (up to 12 characters in length).
- **Receipt number** or **From Multiple Receipts**.
- **Invoice date** (the transaction date for the invoice).
  
  You can specify a fiscal year and period that do not correspond to the invoice date.

- **Invoice total** (the total amount of the invoice, including taxes and additional costs).
  
  When you post the invoice, the program checks the amount you entered as the invoice total against the total of the details and taxes you enter with the invoice. You cannot post the invoice if these totals do not balance.

- **Vendor name** (for vendors who are not defined in Accounts Payable).
  
  The program displays the vendor name you entered on the receipt, but you can change the name for the invoice.

- **Vendor address**.
  
  The program displays the vendor address, phone, and contact information from the receipt, but you can change it.

- **Remit-to location** (the address where you send payment).

- **Bill-to location** (the address where the vendor sends you invoices).

- **1099 code and amount** (for vendors who are subject to 1099 reporting).

  The program displays the fiscal year and period for the invoice date you entered, as well as any description, reference, and comment on the receipt, and the tax group and terms code. You can change this information.
The tabs that are available in the Invoice Entry form depend on whether:

- You are entering an invoice for a primary or secondary vendor.
- You have already posted an invoice for the primary vendor on the receipt.
- You use optional fields and have assigned any to the invoice form.
- If the invoice is job-related, the invoice has retainage.

When you are invoicing a new receipt, the program displays all of the vendor's receipt details, including item details and additional cost details, if any, for the primary vendor. You can add new additional cost details on an invoice, but you cannot add or delete item details. You also cannot delete additional cost details, although you can change the amounts.

The invoice displays item details only for the primary vendor. You can edit the following fields in the grid on the Invoice tab:

**Quantity invoiced.** If you increase or decrease the invoiced quantity, the Quantity Invoiced field is updated on the purchase order. During posting or during Day End Processing, item costs are updated in Inventory Control and, if necessary, new general ledger transactions are created to reflect the change.

You can assign security to the Quantity Invoiced field if you wish to prevent unauthorized changes to the field.

**Billing type, billing rate, retainage percentage, and retention period.** If the invoice is job-related, changes to the quantities, billing rate, and cost will affect the committed and actual quantities and costs for the job in Project and Job Costing. If the invoice is posted exactly like the receipt, no transactions will be sent to Project and Job Costing.

**Unit cost and extended cost.** You can assign security to the Unit Cost and Extended Cost fields, to prevent unauthorized changes to the fields.

**Discount %/Discount Amount.** You can enter a separate discount percentage or amount for each detail. When you enter a discount amount, the program calculates the discount percentage, and displays
the result in this field. If you enter a percentage, the program calculates and displays the discount amount.

Note that if you enter a discount for the invoice on the Totals tab, the program distributes the total discount amount to the details, overwriting any detail discounts you entered.

**Order Number.** If you change an order number that is displayed with a detail line, the new order number does not replace the previous number on the corresponding receipt and will not be reported on the Shippable Backorders report.

You also enter the unit weight, extended weight, vendor item number, comments, and the G/L expense account specified for non-inventory items.

**Optional Fields.** These are company-defined fields that can be added to each of the detail lines in an invoice if you use Sage ERP Accpac's Transaction Analysis and Optional Field Creator. The entries in these fields will flow from the requisition, purchase order and receipt if you use the same fields for those forms. They can also be passed on to Accounts Payable invoices and General Ledger transactions.

If the Optional Fields column appears, you can click the column heading to display the Optional Fields form.

**See also**

[Entering additional cost details on invoices](#)
Entering Exchange Rate Information on Invoices

If you use multicurrency accounting, you can also edit the invoice rate type, rate date, and exchange rate for vendors who do not use the functional currency or are members of the EMU.

If you selected a receipt for the invoice, the Rates tab displays the vendor's rate date, type, and amount from the receipt and default entries for the invoice rates. You can change the rate information for the invoice.

If you are entering a transaction with retainage, you specify on the Retainage tab whether the retainage invoice uses the same exchange rate as the original document or the current rate.
Checking Invoice Totals

• Use the Totals tab on the Invoice Entry form to:
  ○ Check tax and detail totals.
  • **Primary vendor.** On invoices for the primary vendor, the Totals tab shows the total weight of the invoiced items, number of item and additional cost detail lines, tax information for the invoice, invoice subtotal (net of taxes and additional costs), totals of additional costs and taxes, and invoice total.
  • **Secondary vendor.** On invoices for a secondary vendor, the Totals tab shows only the number of additional cost details, related tax information, invoice subtotal, excluded tax amount, and invoice total.

  ○ Enter a discount percentage or a total discount amount for the invoice. When you enter a discount on this tab, the program distributes the total amount to the invoice details, overwriting any discounts you entered for details.
  ○ Enter a comment for the invoice

• Use the Taxes tab to verify the invoice information and tax amount.
Editing Payment Terms

On the Terms tab of the Invoice Entry form, you can change the method of calculating the due date, and the discount date, percentage, and amount for the invoice.

For payment schedules, you can also edit the As Of date and each of the payment amounts. (You can change the terms code only on the Vendor Information tab.)
**Make ___ Lots OR Each Lot Has ___**

When you auto-generate lots, you must enter a number in one of these fields to define how the lots are generated:

- **Make ___ Lots.** If you want to create a fixed number of lots, with the quantity evenly distributed across all of the lots, enter the number of lots.
  
  For example, if you create 10 lots and have 400 items, each lot will have 40 items.

  OR

- **Each Lot Has ___.** If you want to distribute a fixed quantity to each lot, enter the number to include in each lot.
  
  For example, if you want to have 50 items in each lot, the process will generate the number of lots needed to accommodate the quantity of items.
Job-Related

If the return or invoice was job-related, the Job-Related checkbox will be selected for the credit/debit note, and you will not be able to change this selection.

The contract, project, category, cost class and resource for each detail will be provided by the program — as will the customer billing type, billing rate, and A/R item used for billing.

If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead.
Retainage Percentage and Period

If the invoice or return used retainage accounting, the program will display additional percentage and period retainage fields for each detail line.

The program will also display the Retainage tab to let you specify the exchange rate that you want to use for the multicurrency retainage on credit/debit notes.

If you uncheck the Retainage checkbox, the percentage and period retainage fields will disappear from the item detail section, and the Retainage tab will disappear.

You can check the retainage field for job-related transactions even if retainage was not used on the original transaction.

Note that retainage accounting applies only to job-related transactions, and is available only if you selected retainage accounting in the Accounts Payable program.
Billing Information for Job-Related Credit/Debit Notes

For job-related credit and debit notes, the program provides the Billing Type, Billing Rate, and AR Item Number that was used for the invoice or return.

The invoice or return must be job-related for these fields to appear.

Click the following items for more information:

- A/R Item Number
- Billing Currency
- Billing Rate
- Billing Type
- Unit of Measure
Contract, Project, Category, and Item Number/Resource for Job-Related Credit/Debit Notes

If the return or invoice was job-related, the program will provide the job to which each detail was assigned. If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead. (The "resource" appears in the Item Number column.)

Purchase Orders updates the actual quantities and costs for jobs with the amounts on credit or debit notes. For example, costs are affected by credit and debit notes, and quantities are affected by credit note returns. (Quantities are not affected by credit notes that reference invoices or debit notes.)

Note:

- The Job-Related checkbox will be automatically selected if the invoice or return was job-related. You cannot change it.
- You enter/select the resource using the Item Number field.
- You must select the Job-Related checkbox if the reference document no longer exists in PO.

Click the following items for more information:

- Category
- Contract
- Cost Class
- Item Number (Resource)
- Project
Optional Fields in Credit/Debit Note Details

Optional fields are fields that have been added by your company to the transaction entry forms and detail lines in purchase orders transactions. You must have Sage ERP Accpac's Transaction Analysis and Optional Field Creator to add and use optional fields.

If the Optional Fields column appears, you can click the column heading to display the optional fields that have been assigned to this form, and edit their contents.

Optional fields on the Optional Fields tab apply to the transaction as a whole. Optional fields on detail lines apply to the individual transaction entry.

Optional field information can pass through the complete transaction cycle — from purchase requisitions, to purchase orders, to receipts, to invoices, and even to downstream ledgers like Accounts Payable and General Ledger — as long as you assign the same optional fields to each of the transaction forms and to the general ledger accounts.
Billing Information for Additional Costs on Credit/Debit Notes

For additional costs on job-related credit and debit notes, the program provides the Billing Type, Billing Rate, and AR Item Number that was used for the invoice or return.

The invoice or return must be job-related for these fields to appear.

Click the following items for more information:

- A/R Item Number
- Billing Currency
- Billing Rate
- Billing Type
- Unit of Measure
Calculate Labor (job-related costs only)

Select the Calculate Labor field if you want Project and Job Costing to calculate labor amounts for this cost and pass the amount back to Purchase Orders. (Purchase Orders creates the G/L entries for the additional costs.)

Do not select this option for an additional cost for which you don’t want to calculate labor.

The program also lets you specify whether overhead or labor is calculated if you expense the additional cost.
Calculate Overhead (job-related costs only)

Select the Calculate Overhead field if you want Project and Job Costing to calculate overhead amounts for this cost and pass the amount back to Purchase Orders. (Purchase Orders creates the G/L entries for the additional costs.)

Overhead is usually calculated on the discounted extended amount.

For example, you would not select this option if a debit note had additional shipping costs for which you didn’t want to calculate overhead or labor.

The program also lets you specify whether overhead or labor is calculated if you expense the additional cost.
Contract, Project, Category, and Item Number/Resource for Additional Costs on Credit/Debit Notes

If the return or invoice was job-related, the program will provide the job to which each cost was assigned. If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead.

For job-related transactions, you can also specify the Billing Type, Billing Rate, AR Item Number, and AR Item UOM for the customer invoice near the end of the detail line.

Note:

- You specify this information only if you are not prorating the cost to individual detail lines (No Proration). The fields are disabled if you are prorating by cost, quantity or weight, or prorating manually (where you allocate costs to the individual lines on the Distribute Additional Costs form).

- You enter/select the resource using the Item Number field.
- You cannot change these fields once you have added the detail line.
- These fields appear only for job-related credit or debit notes.

Click the following items for more information:

- Category
- Contract
- Cost Class
- Item Number (Resource)
- Project
**Less Discount**

Purchase Orders lets you enter a discount percentage or discount amount for the entire document or enter discounts for individual detail lines.

If you enter a discount for the entire document, Purchase Orders will prorate the discount amount for the document details, overriding any discounts you may have entered manually for the details.
Less Retainage & Net Credit/Debit Note Totals (display only)

These fields appear if this credit or debit note is a job-related document that includes retainage amounts.

The Net Total is the total after retainage is deducted.
Detail Information

You can select a detail on a detail-entry grid on any transaction-entry form, then click the Item/Tax button to open a separate form that lets you view, or edit, information for the selected detail and add new details.

If you are entering an additional cost, you can click the Cost/Tax button to open a similar form that displays a single additional cost detail.

You can also open the form by selecting the item or additional cost detail, then clicking the Zoom button (▲).

Tax Information on the Detail Form

The Detail Items/Taxes form and the Detail Costs/Taxes form provide additional tax information for the detail that you do not see on the detail-entry grid. You can check the tax information for the detail, and you can change the tax class and the tax-included status for each tax authority (if the vendor's tax authority allows tax-included costs).

The Detail Items/Taxes form shows, for the selected detail:

- **Tax authorities** and their descriptions in the vendor's tax group.
- **Detail tax class** — whether the item is taxable.
- **Tax included option** — whether tax is included in the cost (the default choice for this option is provided from the vendor record in Accounts Payable).
- **Tax amount** — the total of allocated, recoverable, and expensed tax amounts for each authority.
- **Allocated tax** — the total tax amount that was allocated to the selected detail line for the tax authority.
- **Recoverable tax** — a tax amount that is refundable.
- **Expensed tax** — if the tax is expensed rather than included in the value of inventory.
- **Tax included** — the tax that is included in the cost of the item.
- **Tax base** — the amount on which the tax is based.

You specify whether a tax is allocated, recoverable, or expensed, and
assign the general ledger account for the tax in the Tax Authorities form in Tax Services.
Detail tax calculation

Tax amounts are calculated for details when you post the transaction or click the Totals tab on the form.

To check tax amounts for details before posting a transaction, select the detail on the detail entry grid, click the Item/Tax button to open the Items/Taxes form, then click the Calculate Taxes button. The program calculates taxes for the entire document, not just for the detail you were editing.

If you edit a tax amount on the Taxes tab, and then use the Calculate Tax button, the program uses the tax tables in Tax Services and your selections for the tax class and the tax-included option to recalculate taxes.

Once taxes are calculated, you can see the allocated tax, tax-included, and net-of-tax amounts for a detail on the detail line, but you cannot change any information in these fields.

See also
- General ledger transactions for edited taxes
- Tax information for additional cost details
Document Tax Information

The Taxes tabs in Purchase Orders forms display the tax calculations for the document as a whole on purchase orders, invoices, returns, credit notes, and debit notes. For receipts, total taxes are displayed on the Taxes tab for the primary vendor, and on the Additional Cost Vendor Taxes form for secondary vendors.

To see the tax information for an item detail line, you select the detail in the detail entry grid, then click the Item/Tax button. To see tax information for an additional cost detail, you select the additional cost, then click the Cost/Tax button. When you choose the button, Purchase Orders automatically calculates the tax amounts if you have not already posted the transaction or used the Calculate Taxes button.

On the Taxes tab and on the Additional Cost Vendor Taxes form, you use the Calculate Tax button to have the program recalculate taxes using the tax tables from Tax Services after you have changed tax amounts. Taxes are calculated automatically when you choose the Totals tab or when you post the transaction.

Tax information for a transaction total includes:

- Tax authority and description (for the vendor’s tax authorities).
- The vendor’s tax class and description for each tax authority. You can change to another tax class that is assigned to the tax authority. New vendors you have not yet added to Accounts Payable are assigned tax class 1 and its corresponding description for each tax authority in the tax group selected for the transaction.

**Changing the tax amount.** You can change the total tax amount to correct small discrepancies, such as rounding errors. (You should correct large errors by updating the tax rates and other information for the tax authorities in Tax Services.)

- The total amount of tax that is *included* in the cost amounts entered for the vendor. You cannot edit this amount.
- The total amount of tax that is charged *in addition* to (not included in) the cost amounts entered for the vendor. You cannot edit this amount.
Tax amount (the total of all tax amounts calculated for the transaction). The total tax amount for an authority is the sum of the tax included and tax excluded. If you change the tax amount, the program adjusts the tax amounts on the details.

**Editing taxes for the document vendor**

Purchase Orders automatically calculates the vendor taxes on each transaction, using the rates entered in Tax Services for the tax authorities and classes assigned to the vendor in Accounts Payable.

You can change the tax class and the tax amount for each tax authority assigned to the document vendor for a transaction on the Taxes tab of the form you are using.
Return Entry Form — Detail Items/Taxes Form

Use this form to check and edit return detail lines. The form contains a form with fields, rather than columns, letting you see all the information you enter for a single detail.

To open the Detail Items/Taxes form

Select the detail on the Return tab, then press F9 or click the Item/Tax button.

To add details in the Detail Items/Taxes form

1. To add a detail, click the New icon next to the Line Number field. (If no other detail is displayed, press tab to accept the number in the Line Number field.)

2. Enter the information for the detail.
   
   You can change a tax class to another tax class that is assigned to the authority, and you can change the choice for the Tax Included option (if the tax authority permits tax-included costs).

3. Click the Add button.

Note: You can add detail lines only if you are entering a return without a receipt number

To edit details in the Detail Items/Taxes form

1. To open an existing detail you want to edit, type its line number or use the navigation buttons beside the Line Number field until the line you want is displayed.

2. Type the information or changes for the detail, then click the Save button.

To compare tax amounts for a return on the screen with the totals on the source document, check the **Totals** tab.

For information about a button on the Detail Items/Taxes form, click the corresponding link:
To open and close the Detail Comments form

- Click the Zoom button (☉) beside the Comments field, or (with the insertion point in the field) press the Shift and F9 keys to open the Detail Comments form.
- Click the Close button, or press the F9 key, to return to the Return tab.

Return Entry Form — overview
Return Entry form — Return tab
Credit/Debit Note Entry — Bill-To Location Information Form

Use this form to edit an existing bill-to location address or to type a new billing address for the credit note or debit note.

You do not have to enter a bill-to location code or address information.

To use the Bill-To Location form

1. If desired, type the location code to use in the Bill-To Location field, or select it from the Finder.

2. To enter or edit address information, click the Zoom button (Zoom) beside the Bill-To Location field or press the F9 key in the field.

3. Type the name and address information to use for the location, or edit displayed information (from the receipt or the location record in Inventory Control).

4. When finished, click the Close button or press F9 to return to the Credit/Debit tab.
Credit/Debit Note Entry — Detail Comments Form

Use this form to type comments which apply to the detail line.

To open the Detail Comments form

Click the Zoom button (🔍) beside the Comments field, or (with the insertion point in the field) press the Shift and F9 to open the Detail Comments form. Click the Close button or press the F9 key to close the form..

To enter comments

1. Open the Detail Comments form.
2. Type the remarks, pressing Enter to start each new line.
3. When finished, click Close.

To edit comments

1. Open the Detail Comments form.
2. Make the changes you need.
3. When finished, click Close.

To delete comments

1. Open the Detail Comments form.
2. Highlight the text to delete, then press the Delete key on your keyboard. If a message appears asking you to confirm the deletion, choose Yes.
3. When finished, click Close.

You can also delete comments by changing the entry in the field to No on the Credit/Debit tab, or by deselecting the Comments box on the Detail Items/Taxes form.

If you use this method, your remarks are not immediately deleted. If you decide before posting the invoice that you want to use the remarks, enter Yes (or reselect the Comments field on the Items/Taxes form). The original remarks will reappear.
Credit/Debit Note Entry — Cost Allocation Form

Use this form to allocate an additional cost detail to more than one receipt.

This form is available only if you are adding an additional cost to a debit note/invoice that is based on multiple receipts.

You can prorate and allocate the additional cost amount manually, or you can let Purchase Orders automatically allocate amounts to receipts according to the proration method you chose.

To prorate a new additional cost on a debit note that uses multiple receipts

1. On the Additional Costs tab of the Credit/Debit Note Entry form, select the additional cost detail line. Then click the Dist. Cost button to display the Cost Allocation form.

2. Prorate the additional cost and allocate amounts to the receipts using one of the following methods:
   - To prorate the additional cost automatically for all the receipts included on the invoice, click the Redist. button.
   - You can change the total amount displayed for the additional cost detail. If you change the amount of the additional cost, do one of the following:
     - Choose Reallocate to have the program automatically prorate the new amount for the receipts according to the proration method you selected on the Additional Costs tab.
     - Allocate the amounts manually.
   - To allocate the additional cost manually, double-click in the Amount column beside the receipt and enter a different amount for each receipt, ensuring that the sum of the amounts equals the total amount of the additional cost.
   - To clear the amounts, choose the Clear button.

3. When you have finished, click the Close button to return to the
Additional Costs tab.

- Use the Dist. Cost button to open the Cost Allocation form for an additional cost detail.

- Use the Redist. button to have Purchase Orders automatically prorate the additional cost amount for the receipts.

- Use the Clear button to clear all amounts in the form.

- Use the Close button to close the Cost Allocation form and return to the Additional Costs tab.

Go back to the Additional Cost tab.
Adding New Vendor Records During Transaction Entry

You can add new vendor records to Accounts Payable from all of the Purchase Orders transaction-entry forms, or type new vendor numbers then add them later in Accounts Payable.

This feature lets you add new vendors "on the fly" so that you can enter transactions for vendors who are not in your Accounts Payable data, even if you do not have time or rights to add vendor accounts in Accounts Payable.

To add a new vendor record from a Purchase Orders form, type the vendor number, press Tab, then use the "New" icon next to the Vendor Number field to open the Vendors form in Accounts Payable and add the record. When you close the Vendors form, you are returned to the Purchase Orders form you were using.

If you do not want to add the record in Accounts Payable while you are entering Purchase Orders transactions, you can just type the new vendor number and the name of the account in the Purchase Orders transaction-entry form, then add the vendor to Accounts Payable later (before you post the Purchase Orders transactions).
Keeping Transaction History

If you selected the Keep Transaction History option in the Purchase Orders Options form, the program will keep details of posted transactions until you remove them using the Clear History form. You can print Transaction Lists of the data — and reprint requisitions, purchase orders, receiving slips, and returns — until you clear the transaction history for them.

*If you do not keep transaction history,* Purchase Orders will automatically delete completed transactions when you run Day End Processing, and you will not be able to drill down to Purchase Orders transactions from General Ledger or Accounts Payable.

Purchase Orders considers the following transactions to be completed:

- Requisitions, purchase orders, receipts, and returns with a Completed status on all detail lines.
- All invoices, credit notes, and debit notes (these transactions are completed when you post them).

If you do not keep history, you cannot display or print copies of completed requisitions, purchase orders, receipts, and returns after you run Day End Processing, and you cannot look up the invoices, credit notes, and debit notes you posted before posting or running Day End Processing.
**Job-Related**

If the receipt was job-related, the Job-Related checkbox will be selected, and you will not be able to change this selection. If you use retainage accounting, you can specify that the invoice uses retainage.

Because the invoice is job-related, fields will appear in the details section to let you enter the contract, project, category, cost class and resource for each detail. Additional detail fields let you enter the customer billing type, billing rate, and A/R item used for billing.

If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead.
Billing Information for Job-Related Invoices

For job-related invoices, you also specify the Billing Type, Billing Rate, and AR Item Number that will be used for the customer invoice.

The Job-Related checkbox in the top part of the form must be selected for these fields to appear.

Click the following items for more information:

- A/R Item Number
- Billing Currency
- Billing Rate
- Billing Type
- Unit of Measure
Contract, Project, Category, and Item Number/Resource for Job-Related Invoices

If the invoice is job-related, specify for each purchase order detail where the items or resources are going to be used. If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead.

For job-related invoices:

- You must select the Job-Related checkbox in the top part of the Purchase Order Entry form for these fields to appear.
- You also specify the Billing Type, Billing Rate, and AR Item Number for the customer invoice near the end of the detail line.
- You enter/select the resource using the Item Number field.
- If the invoice is being created from multiple receipts, all receipts must be either job-related or non-job-related.
- Purchase Orders updates the committed quantities and costs for jobs with the amounts on purchase orders.

Click the following items for more information:

- Contract
- Cost Class
- Item Number (Resource)
- Project
Invoice Entry Form — Detail Items/Taxes Form

Use this form to check and edit invoice detail lines. This form displays one invoice detail at a time using data entry fields, rather than in columns, letting you see all the information for a single detail at a glance.

**To open or close the Detail Items/Taxes form**, select the detail on the Invoices tab, then press F9 or click the Item/Tax button.

Press F9 or click Close to return to the Invoices tab.

**To edit details using the Detail Items/Taxes form**

1. To open an existing detail you want to edit, type its line number or use the navigation buttons beside the Line Number field to display the line you want.

2. Type the information or changes for the detail, then click Save.

For information about a button on the Detail Items/Taxes form, choose the button:

Save Calculate Tax Close

Calculate Labor (job-related costs only)

Select the Calculate Labor field if you want Project and Job Costing to calculate labor amounts for this cost and pass the amount back to Purchase Orders. (Purchase Orders creates the G/L entries for the additional costs.)

Do not select this option for an additional cost for which you don’t want to calculate labor.

The program also lets you specify whether overhead or labor is calculated if you expense the additional cost.
Calculate Overhead (job-related costs only)

Select the Calculate Overhead field if you want Project and Job Costing to calculate overhead amounts for this cost and pass the amount back to Purchase Orders. (Purchase Orders creates the G/L entries for the additional costs.)

Overhead is usually calculated on the discounted extended amount.

For example, you would not select this option if an invoice had additional shipping costs for which you didn’t want to calculate overhead or labor.

The program also lets you specify whether overhead or labor is calculated if you expense the additional cost.
Contract, Project, Category, and Item Number/Resource for Additional Costs on Invoices

If the invoice is job-related, specify for each additional cost detail where the items or resources are going to be used. If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead.

You will also specify the Billing Type, Billing Rate, AR Item Number, and AR Item UOM for the additional cost.

Note:

• You specify this information only if you are not prorating the cost to individual detail lines (No Proration). The fields are disabled if you are prorating by cost, quantity or weight, or prorating manually (where you allocate costs to the individual lines on the Distribute Additional Costs form).

• You enter/select the resource using the Item Number field.

Billing Information for Manually Prorated Additional Costs on Invoices

For job-related additional costs that you are manually prorating, you also specify the Billing Rate that will be used for the customer invoice. The following billing fields from the invoice detail line are display-only on this form: Billing Type, Billing Currency, AR Item Number, and AR Item UOM. These fields will only appear for job-related invoices.

Click the following items for more information:
- AR Item Number
- AR Item UOM
- Billing Currency
- Billing Rate
- Billing Type
For job-related additional costs that are manually prorated, choose the items/resources to which you are allocating the additional cost.

The program displays the “Contract,” “Project,” and “Category” that you specified for each invoice detail line. The "resource" appears in the Item Number column.

You also specify the Billing Rate for the additional cost.

**Note:**

- The proration form is available only if you choose to manually prorate additional costs to detail lines. The following fields from the invoice detail lines are shown as display-only fields on this form: Contract, Project, Category, Cost Class, Item Number, and Description.

Receipt Number
Invoice Entry — Cost Allocation Form

Use this form to allocate an additional cost detail to more than one receipt.

This form is available only if you are adding an additional cost to an invoice that is based on multiple receipts.

Note: For a job-related invoice, the Billing Rate is also allocated with the additional costs to more than one receipt.

You can prorate and allocate the additional cost amount manually, or you can let Purchase Orders automatically allocate amounts to receipts according to the proration method you chose.

To prorate a new additional cost on an invoice that uses multiple receipts

1. On the Additional Costs tab of the Invoice Entry form, select the additional cost detail line. Then click the Dist. Cost button to display the Cost Allocation form.

2. Prorate the additional cost and allocate amounts to the receipts using one of the following methods:

   - To prorate the additional cost automatically for all the receipts included on the invoice, click the Redist. button.

   - You can change the total amount displayed for the additional cost detail. If you change the amount of the additional cost, do one of the following:

     - Choose Reallocate to have the program automatically prorate the new amount for the receipts according to the proration method you selected on the Additional Costs tab.

     - Allocate the amounts manually.

   - To allocate the additional cost manually, double-click in the Amount column beside the receipt and enter a different amount for each receipt, ensuring that the sum of the amounts equals the total amount of the additional cost.

   - To clear the amounts, choose the Clear button.
3. When you have finished, click the Close button to return to the Additional Costs tab.

Use the Dist. Cost button to open the Cost Allocation form for an additional cost detail.

Use the Redist. button to have Purchase Orders automatically prorate the additional cost amount for the receipts.

Use the Clear button to clear all amounts in the form.

Use the Close button to close the Cost Allocation form and return to the Additional Costs tab.

Go back to the Additional Cost tab.
**Distribute Cost Button**

Use the Distribute Cost button to allocate a new additional cost to multiple receipts.

Select the additional cost detail on the Additional Costs tab, then click the Distribute Cost button to open the Allocate Cost form.

Purchase Orders automatically allocates the additional cost amount according to the proration method you selected on the Additional Costs tab. However, you can enter different amounts for each receipt manually.
For job-related purchase orders, you can also specify the Billing Type, Billing Currency, Billing Rate, and AR Item Number (if appropriate) that will be used for the customer invoice.

You must select the Job-Related checkbox in the top part of the Purchase Order Entry form for these fields to appear.

Click the following items for more information:
- A/R Item Number
- Billing Currency
- Billing Rate
- Billing Type
- Unit of Measure
Contract, Project, Category, and Item Number/Resource for Job-Related Purchase Orders

If the purchase order is job-related, you specify for each purchase order detail where the items or resources are going to be used. If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead.

For job-related purchase orders, you can also specify the Billing Type, Billing Rate, and AR Item Number for the customer invoice near the end of the detail line.

Purchase Orders updates the committed quantities and costs for jobs with the amounts on purchase orders.

Note:

• You must select the Job-Related checkbox in the top part of the Purchase Order Entry form for these fields to appear.

• If the purchase order is being created from multiple requisitions, all requisitions must be either job-related or non-job-related.

• You enter/select the resource using the Item Number field.

• Cost plus and fixed price projects do not use an A/R item number.

• You cannot change these fields once you have added the detail line.

Billing Information for Additional Costs on Receipts

For job-related additional costs on receipts, you also specify the Billing Type, Billing Rate, AR Item Number, and AR Item UOM that will be used for the customer invoice.

These fields will only appear for job-related receipts.

Click the following items for more information:

- AR Item Number
- AR Item UOM
- Billing Currency
- Billing Rate
- Billing Type
- Cost Class
Contract, Project, Category, and Item Number/Resource for Additional Costs on Receipts

For job-related receipts, either expense the additional cost or specify where the items or resources are going to be used. If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead.

You also specify the Billing Type, Billing Rate, AR Item Number, and AR Item UOM for the customer invoice.

Note:

- You enter/select the resource using the Item Number field.
- These fields will appear only for job-related receipts, and be enabled only for No Proration additional costs.

Click the following items for more information:

- Category
- Contract
- Cost Class
- Item Number (Resource)
- Project
Billing Information for Manually Prorated Additional Costs on Receipts

For job-related additional costs that you are manually prorating, you also specify the Billing Rate that will be used for the customer invoice. The following billing fields from the receipt detail line are display-only on this form: Billing Type, Billing Currency, AR Item Number, and AR Item UOM. These fields will only appear for job-related receipts.

Click the following items for more information:
- AR Item Number
- AR Item UOM
- Billing Currency
- Billing Rate
- Billing Type
For job-related additional costs that are manually prorated, choose the items/resources to which you are allocating the additional cost.

The program displays the “Contract,” “Project,” and “Category” that you specified for each receipt detail line. The "resource" appears in the Item Number column.

You also specify the Billing Rate for the additional cost.

**Note:**

- The proration form is available only if you choose to manually prorate additional costs to detail lines. The following fields from the receipt detail lines are shown as display-only fields on this form: Contract, Project, Category, Cost Class, Item Number, and Description.

Click the following items for more information:

- Category
- Contract
- Cost Class
- Item Number (Resource)
- Project
Using Retainage (Holdback) Accounting

If you use retainage accounting in Accounts Payable, Purchase Orders lets you account for retainage (or a holdback) that occurs when you withhold a percentage of an invoiced amount, usually by mutual agreement or according to a statute (such as a Builders Lien Act).

Note that you can only specify retainage if you are using Sage ERP Accpac’s Project and Job Costing module, and the transaction is job-related.

There are three steps in processing retainage:

1. First, you process a receipt, invoice, debit note or credit note that specifies a holdback (retainage) for the document.
2. The invoice or debit note with the retainage is transferred to Accounts Payable and posted in that program.
3. Later, you post a separate retainage invoice, debit note, or credit note to invoice the outstanding retainage amount.

Before Using Retainage Accounting

Before you can process retainage in Purchase Orders, you must:

- Set the option to use retainage accounting on the Processing tab of the A/P Options form.
- Specify default retainage settings for vendors on the Retainage tab of the A/P Options form.
- Specify a retainage control account for each account set in your Accounts Payable system.
- Set up contracts in Project and Job Costing.

Entering Original Documents with Retainage

An invoice, debit note, or credit note from which retainage is taken is called an original document in Sage ERP Accpac Advantage Series.

You enter the receipt, invoice, debit note, or credit note using the standard P/O entry forms. To indicate that retainage applies to the
document, however, you select the Job-Related Option and the Retainage option. (Note that this option appears only if you selected the Retainage Accounting option for your Accounts Payable system.)

The program then displays the Retainage tab for the entry form, where you can specify the retainage rate and the retainage terms. You then specify the retainage percentage and the retention period on each detail line.

- Retainage Percentage
- Retention Period
- Retainage Rate
- Retainage Terms

**Taxes on Retainage**

Note that all tax amounts are included on the original retainage document. No tax amounts are included on the retainage invoice, debit note, or credit note that you process to clear the outstanding retainage amount.

**Posting original invoices, debit notes, and credit notes**

When you post the original retainage document in Accounts Payable, the program deducts the retainage from the document total, and posts the amount to the retainage control account.

For example, if you enter an invoice for $10,000 with 10% retainage, an invoice is posted for $9,000 with retainage outstanding of $1,000.

The retainage amount remains in the control account until you invoice it in accordance with:

- The retention period or retainage due date specified for the invoice.
- The number of days in advance specified on the A/P Options form for generating retainage documents.

**Adjusting Original Documents**
Use Adjustment Entry in Accounts Payable to change retainage related to existing invoices, debit notes, and credit notes. When you post the adjustment, the program adjusts the outstanding retainage account.

Note that Accounts Payable does not calculate any retainage on adjustment transactions. You must enter the retainage manually, whether you are adding it for the first time, or adjusting existing retainage debits or credits.
Use this form when adding or editing additional costs from secondary vendors to:

- Enter or edit the vendor's address, contact information, phone number, or fax number.

**To use the Vendor Information form**

1. On the Additional Costs tab, beside the Additional Cost Vendor field, use the navigation buttons to display the secondary vendor or use the Finder to view the secondary vendors associated with the receipt, then select from the list the vendor whose information you want to review.

   The code for the secondary vendor appears in the Vendor Number field beneath the Additional Cost Vendor field.

2. Beside the Vendor Number field (with the vendor code displayed), click the Zoom button to display the address information for the secondary vendor.

3. Enter and edit the information you need.

4. Click the Close button to return to the Additional Costs tab.

To see Help on other Additional Cost forms, choose:

- [Additional Costs tab](#)
- [Additional Cost Vendor Taxes form](#)

Go back to the [Additional Costs tab](#)
**Calculate Taxes button**

Click the Calculate Taxes button if you want to see tax amounts for a detail before you have posted the receipt or opened the Totals tab. (Tax amounts are not automatically calculated until you choose Post for the receipt or click the Taxes tab or Totals tab.)

If you edit tax amounts on the Taxes tab, then use the Calculate Taxes button, the program will replace your changes with amounts it calculates using the tax tables in Tax Services.

Entering 1099 Information

The 1099 Code and 1099 Amount fields appear on the Vendor Information tab in the Invoice Entry form only for vendors for whom the Subject To 1099 Reporting option is selected in Accounts Payable.

The 1099 code specified in the vendor record appears, but you can select another 1099 code from the Finder.

If you enter the 1099 code and amount with an invoice, the 1099 information is included on the invoice created by Day End Processing for Accounts Payable.
Receipt Entry — Vendor Information Form Field List

Address
Contact (and phone, fax and e-mail)
Fax Number
Phone
Vendor Name
Vendor Number
PO Number

If you are entering a receipt of a single purchase order, type the purchase order number or select the number from the Finder of the vendor’s purchase orders.

If you specify a single purchase order number in this field, you will not be able to use the From Multiple POs field.

You do not have to specify purchase order numbers with receipts. However, if you do specify a purchase order number, the purchase order details are displayed and you cannot add new details or receive a quantity that is greater than the quantity ordered on the purchase order.

The Finder for this field shows only incomplete purchase order numbers. (You cannot post receipts to completed purchase orders.)

You cannot change the purchase order number after posting the receipt.
From Multiple POs

To receive all incomplete purchase orders from the vendor, click the zoom button beside the From Multiple POs box, and choose the POs from the form that appears.

- Use the Finder to list and select POs.
- Click the Receive button after choosing the POs and moving to a new line.

All the details from the purchase orders will be listed in the detail entry section of the Receipt tab. You can edit quantities and delete lines.

If you check the From Multiple POs checkbox, the PO Number field will not be available.

The checkbox will be automatically checked if you click the zoom button next to the field.

**Note:** When you create a receipt from more than one purchase order, all of the receipt header information (including the fields on the Optional Fields tab) will come from the first purchase order that you select.
Job-Related

Select the Job-Related checkbox if the requisition is for a project you are managing with Project and Job Costing.

Once you select the job-related checkbox, different fields appear for the details to let you enter the contract, project, category, cost class and resource for the job. If you select the Job Related option, all requisition details must be either job-related. You cannot mix job-related items and non-job-related items on the same requisition.

If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead.

**Note:** You cannot add serialized items or items assigned to lots to job-related requisitions. Instead, you must use a non-job-related requisition, receive them into inventory, and then use the Material Usage form in Project and Job Costing to move them from inventory to jobs.
Contract, Project, Category, and Item Number/Resource for Job-Related Requisitions

If the requisition is job-related, specify for each requisition detail where the items or resources are going to be used. If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead.

Note:

• You must select the Job-Related checkbox in the top part of the Requisition Entry form for these fields to appear.

• All details on a requisition must be either job-related or non-job-related.

• You enter/select the resource using the Item Number field.

• You cannot change these fields once you have added the detail line.

Click the following items for more information:

- Contract
- Cost Class
- Item Number (Resource)
- Project
Use this form to add, edit, and delete requisition detail lines. The form displays all the fields in a separate window, letting you see all the information you enter for a single detail.

To open and close the Detail Items form

- Click the detail line on the Requisition tab, then either click the Details button or press F9 to open the Detail Items form.
- Press F9 or click Close to close the form and return to the Requisition tab.

To add or edit details in the Detail Items form

1. To start a new detail line, click the New icon next to the Line Number field. To open an existing detail you want to edit, type its line number or use the navigation buttons beside the field to display the detail.

2. Type the information or changes for the detail, then choose Add (for new details) or Save.

To delete details in the Detail Items form

1. To open an existing detail you want to delete, type its line number or use the navigation buttons to display the detail.

2. Click the Delete button.

For information about a button on the Detail Items form, click the link below:

- Click the Zoom button (▲) or press Shift + F9 on your keyboard to open the Drop-Shipment Address or Detail Comments form. Click the Close button or press F9 to close these forms.

Comment

Type a comment for the requisition, using up to 250 characters.

Lines automatically wrap when you reach the end. If you want to start a new line before the line wraps, press the Enter key.
Billing Information for Job-Related Returns

For job-related returns, the program provides the Billing Type, Billing Rate, and AR Item Number that was used for the receipt.

The Job-Related checkbox in the top part of the form will be selected if the receipt was job-related.

Click the following items for more information:

- A/R Item Number
- Billing Currency
- Billing Rate
- Billing Type
- Unit of Measure
Contract, Project, Category, and Item Number/Resource for Job-Related Returns

If the purchase order and receipt were job-related, the program will provide the job to which each detail was assigned. If you use different terms than “Contract,” “Project,” and “Category” in Project and Job Costing, the program displays them instead.

Purchase Orders updates the actual quantities and costs for jobs with the amounts on returns.

**Note:**

- The Job-Related checkbox will be automatically selected if the purchase order and receipt were job-related.
- You enter/select the resource using the Item Number field.

Click the following items for more information:

- Category
- Contract
- Cost Class
- Item Number (Resource)
- Project
Return Entry Form — Bill-To Location form

Use this form when entering returns without a receipt number, to specify the address to which you want the vendor to send the credit note for the return. If you are editing a return to a receipt, you cannot change the bill-to location.

To use the Bill-To Location form

1. If you use Inventory Control, you can type the location code to use in the Bill-To Location field, or select it from the Finder.

2. To enter or edit address information, or if you do not use Inventory Control, click the Zoom button (🔍) beside the Bill-To Location field or press the F9 key in the field.

3. Type the name and address information to use for the location, or edit displayed information (from the receipt or the location record in Inventory Control).

4. When finished, choose the Close button or press F9 to return to the Return Information tab.

Opening and closing the Bill-To Location form:

- Click the Zoom button (🔍) to open the Bill-To Location form with a mouse.

- Use the F9 key on your keyboard to open or close the Bill-To Location form.

- Click the Close button to close the Bill-To Location form.

Go back to the Return Information tab.
Checking Return Totals

- Use the Totals tab to check totals for the return and to specify the number of shipping labels to print.

  The Totals tab lets you enter:
  
  - A comment for the return.
  - A discount percentage or a total discount amount for the return. When you enter a discount on this tab, the program distributes the total amount to the return details, overwriting any discounts you entered for details.

  The Totals tab also displays:
  
  - The weight of the returned items.
  
  - Totals for the primary vendor. Information includes the total weight and number of details on the return and total of item details.

- Use the Taxes tab to view or to edit vendor tax classes or the tax amount for the tax authorities assigned to the vendor.
**Accumulate Purchase History**

Use the Accumulate Purchase History option to keep information about the items you have purchased and the vendors who supplied them. The option also keeps information about credit notes, debit notes, and items you returned.

You can view the information in the Purchase History form, use the History button to look it up when you are entering transactions, and print it on the Purchase History report.

**Selecting the type of year.** Purchase Orders keeps purchase history by the type of year (fiscal or calendar) and period you select using the Accumulate By and Period Type options on the Processing tab of the Options form.

If you choose to accumulate by calendar year, the starting date for the year will be January 1. If you accumulate by fiscal year, the starting date will be the first day of your fiscal year.

**Selecting the type of period.** You can also keep the data for up to 53 periods per year (54 periods in a leap year), for any number of years. Use the Period Type option to select from these period types: weekly (Sunday = day 1), seven days (beginning on the first day of the week in your fiscal calendar), bi-weekly (Sunday = day 1), four weeks, monthly, bi-monthly, quarterly, semi-annually, annually, or fiscal period (use the Period Type option).

Return to [Accumulating purchasing history and statistics for reporting](#)
Accumulate Statistics

Use the Accumulate Statistics option to keep statistical totals from all the transactions you post in Purchase Orders, including for each period:

- The number of posted purchase orders, receipts, invoices, returns, credit notes, and debit notes.
- The net quantity purchased, net purchase amount, and net invoice amount.
- The largest and smallest invoice, credit note, and debit note amounts, and the vendors for whom you posted them.
- The average invoice, credit note, and debit note amount.

You can see the information in the Purchase Statistics form and print it on the Purchase Statistics report.

Selecting the type of year. Purchase Orders keeps purchase statistics by the type of year (fiscal or calendar) and period you select using the Accumulate By and Period Type options on the Processing tab of the Options form.

If you choose to accumulate by calendar year, the starting date for the year will be January 1. If you accumulate by fiscal year, the starting date will be the first day of your fiscal year.

Selecting the type of period. You can also keep the data for up to 53 periods per year (54 periods in a leap year), for any number of years. Use the Period Type option to select from these period types: weekly (Sunday = day 1), seven days (beginning on the first day of the week in your fiscal calendar), bi-weekly (Sunday = day 1), four weeks, monthly, bi-monthly, quarterly, semi-annually, annually, or fiscal period (use the Period Type option).

Editing statistics. If you use the Allow Edit Of Statistics option, you can edit and import the statistical totals that are kept by Purchase Orders. Use the Purchase Statistics form to edit the statistics.

Normally, you do not need to change statistics, because they are updated automatically and accurately by Purchase Orders. However, if you set up your Purchase Orders system partway through a fiscal year, you may
want to select the Allow Edit Of Statistics option so that you can enter statistics from your old purchase order system for previous periods of the current year or for previous years.

For more information, choose from the following topics:

PO Type

You can choose to review all pending receipts, or select a particular type of purchase order, either active, standing, future, or blanket POs.
Consolidation Settings in Purchase Orders 5.4

Do Not Consolidate previously consolidated transaction details

In earlier versions of Purchase Orders, the Do Not Consolidate choice actually consolidated general ledger details within each transaction, so the G/L transactions that originated with P/O usually had only a single detail line posted to each general ledger account.

In version 5.4, Do Not Consolidate choice does not consolidate any details

For Purchase Orders 5.3 and 5.4, however, the Do Not Consolidate choice does not consolidate any details — to ensure that optional field information in transaction details is not removed from G/L transactions.

The consolidation choices in G/L Integration perform the following functions:

- **Do Not Consolidate.** All the details posted in Purchase Orders will be included in the General Ledger transaction batch.

  Choose this option if you use optional fields and pass optional field information from Purchase Order transaction details to the General Ledger transaction details.

  The Do Not Consolidate option provides complete information in your general ledger transaction batch — and more transaction details than the same setting in version 5.2.

  Although this choice will result in a longer G/L Transactions report and a larger general ledger batch, you can also consolidate transaction details during posting in Sage ERP Accpac General Ledger.

- **Consolidate Transaction Details by Account.** All the details within a transaction with the same general ledger account number are combined into one detail.

  Choose this option if you do not use optional fields, but still want to associate general ledger transactions with originating documents (for drill down or to maintain a manual audit trail).
This option creates exactly the same G/L transactions that were
created in version 5.2 by the Do Not Consolidate choice.

**Consolidate by Account and Fiscal Period.** All the details with the
same general ledger account number and fiscal period are combined
into one detail.

This option is unchanged from version 5.2. (Note that it only
consolidates details from different transactions if you create
transaction batches using the G/L Batch form.)

**Consolidate by Account, Fiscal Period, and Source.** All the details
with the same general ledger account number, fiscal period, and
source code are combined into one detail.

This option is unchanged from version 5.2. (Note that it only
consolidates details from different transactions if you create
transaction batches using the Create Batch form.)

**Partial consol. if you create batches during posting or day-end
processing**

If you create batches of G/L transactions during posting or day-end
processing, the program can only consolidate the details within
transactions; it cannot consolidate the details from different transactions.

**Create Batch lets you fully consolidate details**

If you use the On Request Using Create Batch Icon option, you can
consolidate transaction details from all transactions for each general
ledger account if you choose Consolidate by Account and Fiscal Period
or Consolidate by Account, Fiscal Period, and Source.

**See also**

[Choosing G/L Integration Options](#)
When the purchase order is job-related, Purchase Orders sends a job-related invoice to Accounts Payable. Because Purchase Orders has already updated Project and Job Costing with receipt information, Accounts Payable will not update Project and Job Costing with invoices that originate with Purchase Orders.

Similarly, Purchase Orders will only send transactions to Project and Job Costing if an invoice includes an adjustment to the receipt — such as a change to the cost, quantity, or billing rate — because receipt entry has already generated the job costing transactions.

**Note:** If you change a job-related invoice in Accounts Payable that originated with Purchase Orders, Project and Job Costing will not be updated with the transaction changes. You must process the changes in Purchase Orders with a credit note or debit note, or with an Accounts Payable transaction such as an adjustment.
Overhead and Labor Calculation

Purchase Orders performs flat rate overhead and labor calculations for additional costs in the following way:

- If the additional cost is prorated to a category that uses a flat rate per unit, Purchase Orders will not calculate an overhead and labor amount.

- If the additional costs uses a No Proration method, and you specify a contract, project, and category where the category uses a flat rate, Purchase orders will disable the Calculate Overhead and Calculate Labor choices.

- If you are processing a credit note or debit note from an invoice, Purchase Orders will not calculate overhead or labor amounts for item details with a flat rate category.
Units of Measure for Committed and Actual Quantities

You must receive goods using the same units of measure that are used in the estimates in Project and Job Costing. Purchase Orders does not convert the different units of measure when it updates PJC with quantities from receipts or invoices.

The following example show what can happen if you receive goods using different units of measure.

Assume that:

- Your estimate includes 70 items that cost $10 each.
- Shipment 1 includes 50 items, packed in 5 boxes.
- Shipment 2 includes 20 items, packed individually.

**Shipment 1**

Material Category - Item 1001 - 5 boxes (conv. factor = 10) $500

**Shipment 2**

Material Category - Item 1001 - 20 items (conv. factor = 1) $200

When Project and Job Costing is updated with the quantities and costs of these shipments, the actual quantity and cost for item 1001 will appear as follows:

Material Category - Item 1001 - Qty = 25 items, Cost = $700
You enter additional costs only with receipts, invoices, credit notes, and debit notes. The same tax information is displayed for additional cost details as for item details (described above).

**Tax on prorated additional costs.** For each additional cost detail, you can choose a proration method that specifies how or whether to prorate the additional cost and associated allocated tax amounts to the item costs.

**Prorating automatically.** If you choose to prorate automatically, posting or Day End Processing calculates the tax amount for each additional cost and prorates the additional cost amount and allocated taxes to item details, according to the proration method you choose (by quantity, cost, or weight).

The prorated amounts are not displayed with the affected details. They are also not included in the tax amounts you see in the Item Tax Distribution form (because they are not part of the base on which taxes are calculated for items), but they are shown on the posting journals for the transactions.

**Recoverable and expensed taxes.** Journal entries for recoverable and expensed taxes are created in Accounts Payable when the invoice batch from Purchase Orders is posted.

**Adding taxes to manually prorated additional cost amounts.** If you prorate additional costs manually, you must accurately calculate the tax amount for each cost you are prorating, then allocate the full amount of the cost and applicable allocated taxes to item details. You must enter the exact amount to prorate to each item detail in the Manual Proration field for the detail line on the receipt or return.

**Multicurrency ledgers.** If you use multicurrency accounting, you can enter additional costs to be manually prorated only for vendors who use the functional currency.

**Checking manual proration tax amounts.** If you are manually prorating an additional cost, you can use the Additional Cost Vendor Taxes form to check the allocated tax amount calculated by the program for the
additional cost detail.

If the tax calculations for a transaction include recoverable and expensed taxes, you should calculate the allocated tax to prorate manually for each detail, using the Item/Tax button on the detail entry grid (on the first tab) or in Detail Items/Taxes form.

Use the Totals tab to check the total additional cost amount (including taxes) to prorate manually to item details. The Totals tab lists:

• The total amount to be prorated manually (in the Additional Cost To Be Allocated field). This amount is for all vendors included in the transaction whose costs you are prorating manually.
• The amount you have prorated so far (in the Manually Prorated field).
• The amount, if any, which has not been prorated or by which the manual proration is greater or less than the total (in the Out Of Balance field).
Use this form to type comments which apply to the detail line.

To open the Detail Comments form

- Press the Shift and F9 keys in the Comments field to open or close the form using your keyboard.
- Click the Zoom button ( batchSize ) beside the Comments field to open the form with a mouse.

To enter comments

1. Open the Detail Comments form.
2. Type the remarks, pressing Enter to start each new line.
3. When finished, click Close to close the form.

To edit comments

1. Open the Detail Comments form.
2. Make the changes you need.
3. When finished, click Close to close the form.

To delete comments

1. Open the Detail Comments form.
2. Highlight the text to delete, then press the Delete key on your keyboard. If a message appears asking you to confirm the deletion, choose Yes.
3. When finished, click Close to close the form.

You can also delete comments by changing the entry in the field to No on the Return tab, or by deselecting the Comments box on the Detail Items/Taxes form (click the field or press the Shift and F9 keys at the same time in it).

If you use this method, your remarks are not immediately deleted. If you decide before posting the return that you want to use the remarks, enter Yes (or reselect the Comments field on the Detail Items/Taxes form). The original remarks will reappear.
Go to the Return tab.
