Detailed Description

This file provides a set of functions needed to manage a M24LR64 or M24M01 I2C EEPROM memory, or a M95M01 SPI EEPROM memory.

==========

Notes:

- This driver is intended for STM32F30x families devices only.
- The I2C EEPROM memory (M24LR64) is available on separate daughter board ANT7-M24LR-A, which is provided with the STM32F303C EVAL board. To use this driver with M24LR64, you have to connect the ANT7-M24LR-A to CN1 connector of STM32F303C EVAL board. Jumper JP5 and JP6 needs to be set in I2C2 position. Jumper JP8 (E2P WC) needs to be set.

- The I2C EEPROM memory (M24M01) is mounted on the STM32F303C EVAL board. Jumper JP5 and JP6 needs to be set in I2C2_F position. Jumper JP8 (E2P WC) needs to be set.

- The SPI EEPROM memory (M95M01) is available directly on STM32F303C EVAL board.

==========

It implements a high level communication layer for read and write from/to this memory. The needed STM32F30x hardware resources (I2C, SPI and GPIO) are defined in **stm32303c_eval.h** file, and the initialization is performed depending of EEPROMs in **EEPROM_I2C_IO_Init()** or **EEPROM_SPI_IO_Init()** functions declared in **stm32303c_eval.c** file. You can easily tailor this driver to any other development board, by just adapting the defines for hardware resources and **EEPROM_I2C_IO_Init()** or **EEPROM_SPI_IO_Init()** functions.

> **Note:**

> In this driver, basic read and write functions (**BSP_EEPROM_ReadBuffer()** and **BSP_EEPROM_WriteBuffer()**) use Polling mode to perform the data transfer to/from EEPROM memories. +---------- ---------- ----------+ | Pin assignment for M24M01 EEPROM | +----------+----------+----------+ | STM32F30x I2C Pins | EEPROM | Pin | +---------- ----------+----------+----------+ | . | NC | 1 | | . | E1(VDD) | 2 (3.3V) | | . | E2(GND) | 3 (0V) | | . | VSS | 4 (0V) | | EEPROM_I2C_SDA_PIN/ SDA | SDA | 5 | | EEPROM_I2C_SCL_PIN/ SCL | SCL | 6 | | . | /WC(VSS)| 7 (0V) | | . | VDD | 8 (3.3V) | +----------+----------+---------- ----------+ +----------+ | Pin assignment for M24LR64 EEPROM | +---------- ---+----------+----------+ | STM32F30x I2C Pins | EEPROM | Pin | +----------+----------+----------+ | . | E0(GND) | 1 (0V) | | . | AC0 | 2 | | . | AC1 | 3 | | . | VSS | 4 (0V) | | EEPROM_I2C_SDA_PIN/ SDA | SDA | 5 | | EEPROM_I2C_SCL_PIN/ SCL | SCL | 6 | | . | E1(GND) | 7 (0V) | | . | VDD | 8 (3.3V) | +----------+----------+---------- ----------+

File List

Here is a list of all files with brief descriptions:

stm32303c_eval.c [code]	This file provides a set of firmware functions to manage LEDs, push-button and COM port available on STM32303C-EVAL evaluation board (MB1019) RevC from STMicroelectronics
stm32303c_eval.h [code]	This file contains definitions for STM32303C_EVAL's Leds, push-buttons and COM port hardware resources
stm32303c_eval_audio.c [code]	This file provides the Audio driver for the STM32303C_EVAL evaluation board(MB1019)
stm32303c_eval_audio.h [code]	This file contains all the functions prototypes for the **stm32303c_eval_audio.c** driver
stm32303c_eval_eeprom.c [code]	This file provides a set of functions needed to manage a M24LR64 or M24M01 I2C EEPROM memory, or a

	M95M01 SPI EEPROM memory
stm32303c_eval_eeprom.h [code]	This file contains all the functions prototypes for the **stm32303c_eval_eeprom.c** firmware driver
stm32303c_eval_lcd.c [code]	This file includes the driver for Liquid Crystal Display modules mounted on STM32303C-EVAL evaluation board
stm32303c_eval_lcd.h [code]	This file contains all the functions prototypes for the **stm32303c_eval_lcd.c** driver
stm32303c_eval_sd.c [code]	This file provides a set of functions needed to manage the SPI SD Card memory mounted on STM32303C-EVAL board. It implements a high level communication layer for read and write from/to this memory. The needed STM32F30x hardware resources (SPI and GPIO) are defined in **stm32303c_eval.h** file, and the initialization is performed in SD_LowLevel_Init() function declared in **stm32303c_eval.c** file. You can easily tailor this driver to any other development board, by just adapting the defines for hardware resources and SD_LowLevel_Init() function

stm32303c_eval_sd.h [code]	This file contains the common defines and functions prototypes for the **stm32303c_eval_sd.c** driver
stm32303c_eval_tsensor.c [code]	This file provides a set of functions needed to manage the I2C TS751 temperature sensor mounted on STM32303C-EVAL board . It implements a high level communication layer for read and write from/to this sensor. The needed STM323F30x hardware resources (I2C and GPIO) are defined in **stm32303c_eval.h** file, and the initialization is performed in **TSENSOR_IO_Init()** function declared in **stm32303c_eval.c** file. 00038                                       User NOTES

00039 1. How To use this driver:
00040 --------------------------
00041    - This driver is used to drive indirectly
 an LCD TFT.
00042    - This driver supports the AM-240320L8TNQ
W00H (ILI9320),
00043      AM-240320LDTNQW00H (SPFD5408B) and AM24
0320LGTNQW00H (HX8347D) LCD
00044      mounted on MB895 daughter board
00045    - The ILI9320, SPFD5408B and HX8347D comp
onents driver MUST be included with this driver.
00046
00047 2. Driver description:
00048 ---------------------
00049   + Initialization steps:
00050      o Initialize the LCD using the LCD_Init
() function.
00051
00052   + Display on LCD
00053      o Clear the hole LCD using yhe LCD_Clea
r() function or only one specified
00054        string line using the LCD_ClearString
Line() function.
00055      o Display a character on the specified
line and column using the LCD_DisplayChar()
00056        function or a complete string line us
ing the LCD_DisplayStringAtLine() function.
00057      o Display a string line on the specifie
d position (x,y in pixel) and align mode
00058        using the LCD_DisplayStringAtLine() f
```

```
unction.
00059      o Draw and fill a basic shapes (dot, li
ne, rectangle, circle, ellipse, .. bitmap)
00060        on LCD using a set of functions.

00005   * @brief   This file provides a set of functions needed to manage the SPI SD
00006   *          Card memory mounted on STM32303C-EVAL board.
00007   *          It implements a high level communication layer for read and write
00008   *          from/to this memory. The needed STM32F30x hardware resources (SPI and
00009   *          GPIO) are defined in stm32303c_eval.h file, and the initialization is
00010   *          performed in SD_LowLevel_Init() function declared in stm32303c_eval.c
00011   *          file.
00012   *          You can easily tailor this driver to any other development board,
00013   *          by just adapting the defines for hardware resources and

00060                                       User NOTES

00061 1. How To use this driver:
00062 --------------------------
00063    - This driver is used to drive the micro
SD external card mounted on STM32303C-EVAL
00064      evaluation board.
00065    - This driver does not need a specific co
mponent driver for the micro SD device
00066      to be included with.
00067
00068 2. Driver description:
00069 ---------------------
00070   + Initialization steps:
00071      o Initialize the micro SD card using th
e SD_Init() function.
00072      o To check the SD card presence you can
 use the function SD_IsDetected() which
00073        returns the detection status
00074      o The function SD_GetCardInfo() is used
 to get the micro SD card information
00075        which is stored in the structure "HAL
_SD_CardInfoTypedef".
00076
00077   + Micro SD card operations
00078      o The micro SD card can be accessed wit
h read/write block(s) operations once
00079        it is reay for access. The access can
```

```
d be performed in polling
00080        mode by calling the functions SD_Read
Blocks()/SD_WriteBlocks()
00081      o The SD erase block(s) is performed us
ing the function SD_Erase() with specifying
00082        the number of blocks to erase.
00083      o The SD runtime status is returned whe
n calling the function SD_GetStatus().

Function Documentation

static uint32_t EEPROM_I2C_Init (void) [static]

Initializes peripherals used by the I2C EEPROM driver.

Note:
There are 2 different versions of M24LR64 (A01 & A02). Then try to connect on 1st one (EEPROM_I2C_ADDRESS_A01) and if problem, check the 2nd one (EEPROM_I2C_ADDRESS_A02)

Return values:

static uint32_t EEPROM_I2C_ReadBuffer (uint8_t * pBuffer,
uint16_t ReadAddr,
uint32_t * NumByteToR
) [static]

Reads a block of data from the I2C EEPROM.

Parameters:

pBuffer	pointer to the buffer that receives the data

	read from the EEPROM.
ReadAddr	EEPROM's internal address to start reading from.
NumByteToRead	pointer to the variable holding number of bytes to be read from the EEPROM.

Return values:

static uint32_t EEPROM_I2C_WaitEepromStandbyState (void) [st

Wait for EEPROM I2C Standby state.

Note:

This function allows to wait and check that EEPROM has finished the last operation. It is mostly used after Write operation: after receiving the buffer to be written, the EEPROM may need additional time to actually perform the write operation. During this time, it doesn't answer to I2C packets addressed to it. Once the write operation is complete the EEPROM responds to its address.

Return values:

EEPROM_OK	(0) if operation is correctly performed, else return value different from EEPROM_OK (0) or the timeout user callback.

static uint32_t EEPROM_I2C_WritePage (uint8_t * pBuffer, uint16_t WriteAddr, uint32_t * NumByteToWri) [static]

Writes more than one byte to the EEPROM with a single WRITE cycle.

Note:
The number of bytes (combined to write start address) must not cross the EEPROM page boundary. This function can only write into the boundaries of an EEPROM page. This function doesn't check on boundaries condition (in this driver the function **BSP_EEPROM_WriteBuffer()** which calls EEPROM_WritePage() is responsible of checking on Page boundaries).

Parameters:

pBuffer	pointer to the buffer containing the data to be written to the EEPROM.
WriteAddr	EEPROM's internal address to write to.
NumByteToWrite	pointer to the variable holding number of bytes to be written into the EEPROM.

Note:
The variable pointed by NumByteToWrite is reset to 0 when all the data are written to the EEPROM. Application should monitor this variable in order know when the transfer is complete.

Return values:

EEPROM_OK (0) if operation is correctly performed, else return value different from EEPROM_OK (0) or the timeout user callback.

static uint32_t EEPROM_SPI_Init (void) [static]

Initializes peripherals used by the SPI EEPROM driver.

static uint32_t EEPROM_SPI_ReadBuffer (uint8_t * pBuffer, uint16_t ReadAddr, uint32_t * NumByteToR) [static]

Reads a block of data from the SPI EEPROM.

Parameters:

pBuffer pointer to the buffer that receives the data read from the EEPROM.

ReadAddr	EEPROM's internal address to start reading from.
NumByteToRead	pointer to the variable holding number of bytes to be read from the EEPROM.

Note:
The variable pointed by NumByteToRead is reset to 0 when all the data are read from the EEPROM. Application should monitor this variable in order know when the transfer is complete.

Files

file **stm32303c_eval.c** [code]

This file provides a set of firmware functions to manage LEDs, push-button and COM port available on STM32303C-EVAL evaluation board (MB1019) RevC from STMicroelectronics.

file **stm32303c_eval.h** [code]

This file contains definitions for STM32303C_EVAL's Leds, push-buttons and COM port hardware resources.

file **stm32303c_eval_audio.c** [code]

This file provides the Audio driver for the STM32303C_EVAL evaluation board(MB1019).

file **stm32303c_eval_audio.h** [code]

This file contains all the functions prototypes for the **stm32303c_eval_audio.c** driver.

file **stm32303c_eval_eeprom.c** [code]

This file provides a set of functions needed to manage a M24LR64 or M24M01 I2C EEPROM memory, or a M95M01 SPI EEPROM memory.

file **stm32303c_eval_eeprom.h** [code]

This file contains all the functions prototypes for the

stm32303c_eval_eeprom.c firmware driver.

file **stm32303c_eval_lcd.c** [code]

This file includes the driver for Liquid Crystal Display modules mounted on STM32303C-EVAL evaluation board.

This file contains all the functions prototypes for the **stm32303c_eval_lcd.c** driver.

file **stm32303c_eval_sd.c** [code]

This file provides a set of functions needed to manage the SPI SD Card memory mounted on STM32303C-EVAL board. It implements a high level communication layer for read and write from/to this memory. The needed STM32F30x hardware resources (SPI and GPIO) are defined in **stm32303c_eval.h** file, and the initialization is performed in SD_LowLevel_Init() function declared in **stm32303c_eval.c** file. You can easily tailor this driver to any other development board, by just adapting the defines for hardware resources and SD_LowLevel_Init() function.

file **stm32303c_eval_sd.h** [code]

This file contains the common defines and functions prototypes for the **stm32303c_eval_sd.c** driver.

file **stm32303c_eval_tsensor.c** [code]

This file provides a set of functions needed to manage the I2C TS751 temperature sensor mounted on STM32303C-EVAL board . It implements a high level communication layer for read and write from/to this sensor. The needed STM323F30x hardware resources (I2C and GPIO) are defined in **stm32303c_eval.h** file, and the initialization is performed in **TSENSOR_IO_Init()** function declared in **stm32303c_eval.c** file. You can easily tailor this driver to any other development board, by just adapting the defines for hardware resources and **TSENSOR_IO_Init()** function.

file **stm32303c_eval_tsensor.h** [code]

This file contains all the functions prototypes for the **stm32303c_eval_tsensor.c** firmware driver.

 User NOTES
00039 How To use this driver:
00040 -----------------------
00041    + This driver supports STM32F30x devices
on STM32303C_EVAL Evaluation boards:
00042    + Call the function BSP_AUDIO_OUT_Init(
00043                                           OutputDe
vice: physical output mode (OUTPUT_DEVICE_SPEAKER,

00044
     OUTPUT_DEVICE_HEADPHONE, OUTPUT_DEVICE_AUTO o
r
00045
     OUTPUT_DEVICE_BOTH)
00046                                          Volume:
initial volume to be set (0 is min (mute), 100 is
max (100%)
00047                                          AudioFre
q: Audio frequency in Hz (8000, 16000, 22500, 3200
0 ...)
00048                                           this pa
rameter is relative to the audio file/stream type.
00049                                         )
00050       This function configures all the hardw
are required for the audio application (codec, I2C
, I2S,
00051       GPIOs, DMA and interrupt if needed). T
his function returns 0 if configuration is OK.
00052       if the returned value is different fro
m 0 or the function is stuck then the communicatio
n with
00053       the codec has failed (try to un-plug t
```

```
he power or reset device in this case).
00054       - OUTPUT_DEVICE_SPEAKER: only speaker
will be set as output for the audio stream.
00055       - OUTPUT_DEVICE_HEADPHONE: only headph
ones will be set as output for the audio stream.
00056       - OUTPUT_DEVICE_AUTO: Selection of out
put device is made through external switch (implem
ented
00057           into the audio jack on the evaluati
on board). When the Headphone is connected it is u
sed
00058           as output. When the headphone is di
sconnected from the audio jack, the output is
00059           automatically switched to Speaker.
00060       - OUTPUT_DEVICE_BOTH: both Speaker and
 Headphone are used as outputs for the audio stream

00061           at the same time.
00062    + Call the function BSP_AUDIO_OUT_Play(
00063                                       pBuffer: p
ointer to the audio data file address
00064                                       Size: size
 of the buffer to be sent in Bytes
00065                                     )
00066       to start playing (for the first time)
from the audio file/stream.
00067    + Call the function BSP_AUDIO_OUT_Pause()
 to pause playing
00068    + Call the function BSP_AUDIO_OUT_Resume(
) to resume playing.
00069        Note. After calling BSP_AUDIO_OUT_Pau
se() function for pause, only BSP_AUDIO_OUT_Resume
() should be called
00070           for resume (it is not allowed to c
all BSP_AUDIO_OUT_Play() in this case).
00071        Note. This function should be called
only when the audio file is played or paused (not
```

```
stopped).
00072    + For each mode, you may need to implemen
t the relative callback functions into your code.
00073       The Callback functions are named BSP_A
UDIO_OUT_XXX_CallBack() and only their prototypes
are declared in
00074       the stm32303c_eval_audio.h file. (refe
r to the example for more details on the callbacks
 implementations)
00075    + To Stop playing, to modify the volume l
evel or to mute, use the functions
00076        BSP_AUDIO_OUT_Stop(), BSP_AUDIO_OUT_S
etVolume(), BSP_AUDIO_OUT_SetFrequency(), BSP_AUDI
O_OUT_SetOutputMode() and BSP_AUDIO_OUT_SetMute().
00077    + The driver API and the callback functio
ns are at the end of the stm32303c_eval_audio.h fi
le.
00078
00079    Driver architecture:
00080    -------------------
00081    + This driver provide the High Audio Laye
r: consists of the function API exported in the st
m32303c_eval_audio.h file
00082        (BSP_AUDIO_OUT_Init(), BSP_AUDIO_OUT_
Play() ...)
00083 + This driver provide also the Media Access
Layer (MAL): which consists of functions allowing
to access the media containing/
00084        providing the audio file/stream. Thes
e functions are also included as local functions i
nto
00085        the stm32303c_eval_audio.c file (I2Sx
_MspInit() and I2Sx_Init())
00086
00087  Known Limitations:
00088 -------------------
00089    1- When using the Speaker, if the audio f
```

```
ile quality is not high enough, the speaker output
00090       may produce high and uncomfortable noi
se level. To avoid this issue, to use speaker
00091       output properly, try to increase audio
 file sampling rate (typically higher than 48KHz).
00092       This operation will lead to larger fil
e size.
00093    2- Communication with the audio codec (th
rough I2C) may be corrupted if it is interrupted b
y some
00094       user interrupt routines (in this case,
 interrupts could be disabled just before the star
t of
00095       communication then re-enabled when it
 is over). Note that this communication is only don
e at
00096     the configuration phase (BSP_AUDIO_OUT_I
nit() or BSP_AUDIO_OUT_Stop()) and when Volume con
trol modification is
00097       performed (BSP_AUDIO_OUT_SetVolume() o
r AUDIO_OUT_Mute() or BSP_AUDIO_OUT_SetOutputMode(
)).
00098       When the audio data is played, no comm
unication is required with the audio codec.
00099   3- Parsing of audio file is not implemente
d (in order to determine audio file properties: Mo
no/Stereo, Data size,
00100      File size, Audio Frequency, Audio Data
 header size ...). The configuration is fixed for t
he given audio file.
00101   4- Mono audio streaming is not supported (
in order to play mono audio streams, each data sho
uld be sent twice
00102      on the I2S or should be duplicated on t
he source buffer. Or convert the stream in stereo
 before playing).
00103    5- Supports only 16-bits audio data size.
