

Welcome to the documentation for **PHP File Uploader**, the world's leading file upload component for PHP!

PHP File Uploader is an easy to use, hi-performance File Upload Component which allows you to upload files to web server without refreshing the page.

It allows you select and upload multiple files and cancel running uploads of new files during uploading.

The look and feel of file upload controls can be customized to seamlessly blend into your website design.

Top features and Benefits

- **Select multiple files at once when sending**

PHP File Uploader allows you to select and upload multiple files at once rather than having to select and upload each file individually.

- **Client side validation of the file size/type before uploading**

Client side validation of file size/types prior to uploading them to the server to increase usability and reduce consumption of network and server resources.

- **Hi-Performance with optimized memory usage**

By streaming uploads directly to an output stream, rather than loading them into memory, PHP File Uploader achieves a level of scalability and performance impossible to reach with PHP's built-in functions.

- **Provides rich progress and status information during the upload**

PHP File Uploader has a real time progress bar which keeps users informed of file upload. It offers an accurate and detailed progress indicator for all uploads. It also gives end-users the ability to cancel uploads at any time.

- **Powerful approaches to uploading files without refreshing the page**

Ever wanted to upload files using AJAX like in GMAIL, without refreshing the page?

- **Asynchronous file upload**

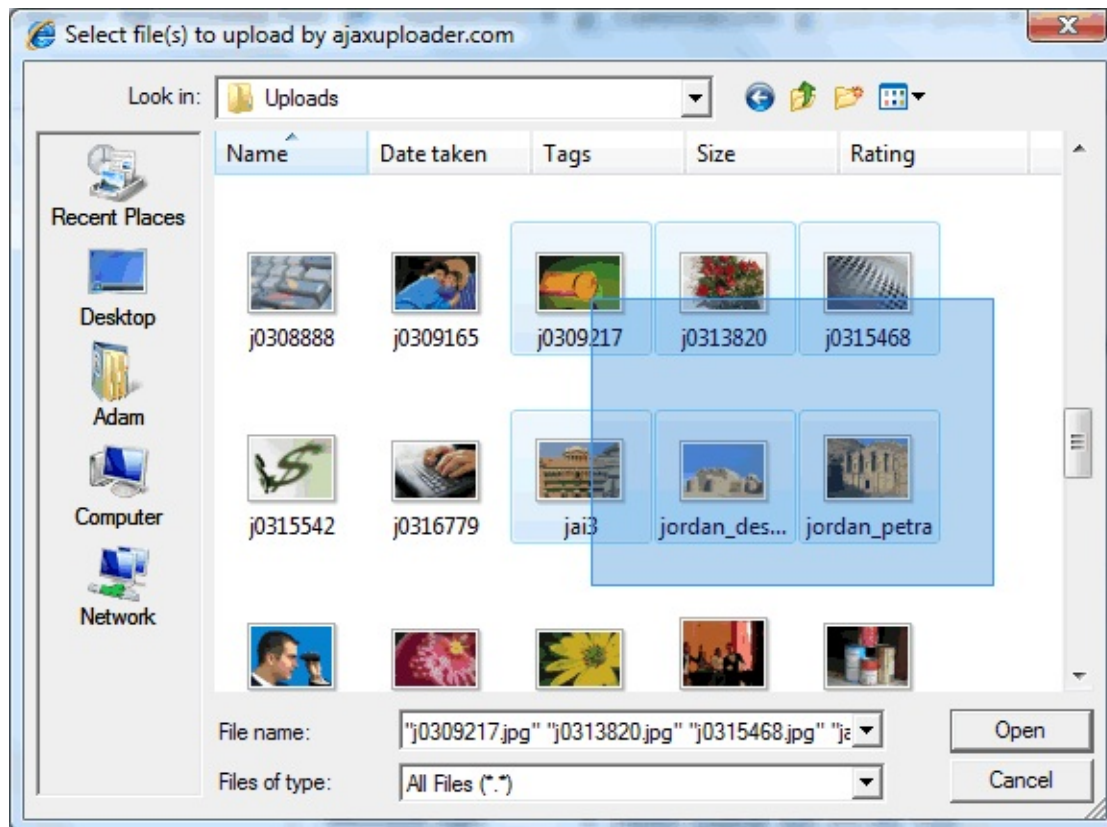

This means that the file is uploaded in the background, allowing you to continue to use the page while the file is being uploaded.

Features

| Features | |
|---|---|
| Select multiple files for upload <small>NEW</small> PHP File Uploader allows you to select and upload multiple files at once rather than having to select and upload each file individually. | ✓ |
| Client side validation of the file size/type before uploading <small>NEW</small> Client side validation of file size/types prior to uploading the files to a server to increase usability and reduce consumption of network and server resources. | ✓ |
| Supports AJAX Uploads without PostBack PHP File Uploader allows you to upload files to web server without refreshing the page. | ✓ |
| Allows uploads to be cancelled by end-users With PHP File Uploader, end-users can easily cancel upload process at any time. | ✓ |
| Real time progress bar PHP File Uploader has real time progress bar which keeps track of every file upload and allows end-users to watch how much of your file has been uploaded. | ✓ |
| Persist uploaded file through postback PHP File Uploader can hold an object temporarily and you can save it anytime you want. | ✓ |
| Automatic File Validation PHP File Uploader automatically validate the size, extension and the file name of the uploaded files. | ✓ |

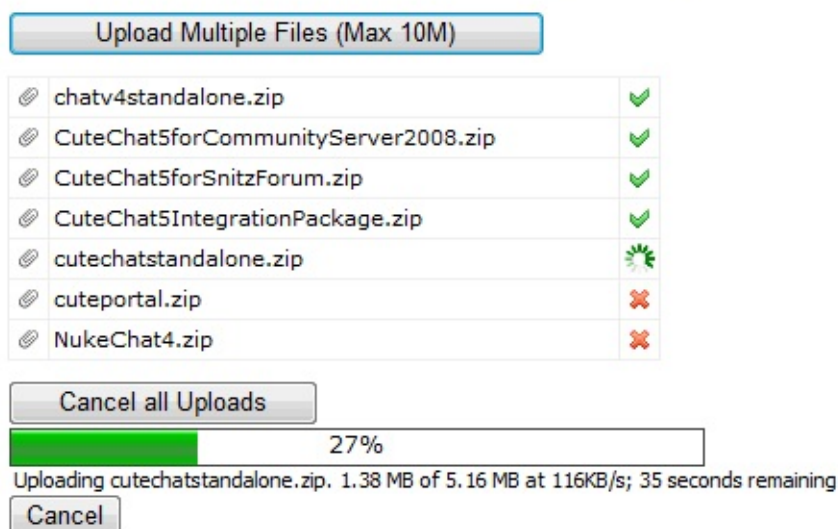

| | |
|---|---|
| Large File Upload | ✔ |
| PHP File Uploader allows you to upload large files (up to 2GB) to a server with the low server memory consumption. | |
| Simplified application integration and development | ✔ |
| PHP File Uploader includes a variety of classes and components which allow complete control over the uploading process. | |
| Customizable Appearance | ✔ |
| The look and feel of File Upload controls can be customized to seamlessly blend into your website design. | |
| Cross platform, Cross browsers | ✔ |
| Runs on PHP 5.0, supports all major browsers; If you attempt to use PHP File Uploader using a downlevel browser it will display a regular upload control. | |
| Asynchronous file upload | ✔ |
| Web page hosting your application remains perfectly responsive and usable throughout the transfer. This allows the user to work on other part of the page while the uploading is in progress. | |

Is it possible to try PHP File Uploader before I buy it?

Yes. Simply click [here](#) to download an evaluation version of PHP File Uploader software now. There is no charge. Put PHP File Uploader to the test in your own specific applications.

[tc](#)

Do you offer non-profit or educational organisation discounts?

Yes, we offer discount to non-profit organization depending on the organizations line of work.

[tc](#)

How often are product updates released?

Product major version updates are released generally every year. Minor version updates are released every 3-4 months. CuteSoft offers product free minor version upgrades.

[tc](#)

How do I receive the product after my purchase?

Upon purchase, you will receive an instant notification via email with the download details of your product.

[tc](#)

Is the license a life time license? Do I have to pay any additional fees?

The license you purchase is a lifetime license, and you do NOT need to pay license fees at any time after your purchase. There are no additional monthly or yearly fees to use the software.

[tc](#)

Do you have any additional methods of payment besides credit card or PayPal?

We accept both check and direct wire transfers. For more information regarding these forms of payment, please contact us.

[tc](#)

Can I suggest new features?

Absolutely, We love customer input, ideas, and suggestions. Please feel free to contact us anytime with your feature suggestion, or post in our

forums.

PHP File Uploader Licensing Explained

This following article describes our licensing policy for the PHP File Uploader.

[PHP File Uploader Licensing Info](#)

[tc](#)

What is PHP File Uploader?

PHP File Uploader is an easy to use, hi-performance File Upload Control which allows you to upload files to web server without refreshin the page.

It allows you select and upload multiple files and cancel running uploads, add new files during uploading.

The look and feel of file upload controls can be customized to seamlessly blend into your website design.

[tc](#)

What are the limitations of the Evaluation version?

All features work the same as they do in the full version. The evaluation version using a temp license file which will expire in about 30 dasy. Once you place the order, you'll will receive your own license file.

[tc](#)

Does this product require users to download a browser plug-in?

No, PHP File Uploader is completely self contained and require no outside plug-in's or add-ons.

[tc](#)

Can PHP File Uploader be easily translated into various languages?

Yes.

[tc](#)

Can I change the look and feel of an Upload control or Progress Panel?

Yes! The Upload control exposes many Appearance properties that allow you to manipulate the look of the "browse" button and textbox. You can even use custom images so the Upload control can match your website design. The Progress Panel can be extensively modified so the text, progress bars, and the cancel button are independently modified. At runtime you can even issue custom status messages so reporting progress to your end users is tailored to your application.

[tc](#)
[tc](#)

Is it possible to upload multiple files at the same time?

Yes, PHP File Uploader allows for uploading multiple files, please check the online demo.

[tc](#)

How do I handle a large file upload?

By default there is a restriction of 2 Megabytes file upload at a time for PHP. For large files uploading we need to change some settings in php.ini.

- Locate the php.ini file in the folder your upload script resides in.
- In the php.ini file, locate and modify the line called 'upload_max_filesize = 2M'

PHP presents a very versatile and user friendly interface for handling file uploads. The default installation is not capable of working with files greater than 2 Mega Bytes size. Here are some more options for configuring PHP to handle large file transfers.

php.ini settings

The php.ini file contains all the configuration settings for PHP. These can be overridden by directives in apache .htaccess files or even with the scripts themselves but for the moment let's just concentrate on the ini file.

This file contains the following settings that we need to modify according

to our needs.

- `file_uploads`
- `upload_max_filesize`
- `max_input_time`
- `memory_limit`
- `max_execution_time`
- `post_max_size`

file_uploads

If you set this off, uploading is disabled.

upload_max_filesize and post_max_size

The `post_max_size` sets the upper limit on the amount of data that a script can accept in this manner. Ideally this value should be larger than the value that you set for `upload_max_filesize`.

It's important to realize that **`upload_max_filesize`** is the sum of the sizes of all the files that you are uploading. **`post_max_size`** is the `upload_max_filesize` plus the sum of the lengths of all the other fields in the form plus any mime headers that the encoder might include.

memory_limit

When the PHP engine is handling an incoming POST it needs to keep some of the incoming data in memory. Setting too high a value can be very dangerous because if several uploads are being handled concurrently all available memory will be used up and other unrelated scripts that consume a lot of memory might effect the whole server as well.

max_execution_time and max_input_time

These settings define the maximum life time of the script and the time that the script should spend in accepting input. If several mega bytes of data are being transferred `max_input_time` should be reasonably high. You can override the setting in the ini file for `max_input_time` by calling the **`set_time_limit()`** function in your scripts.

While working with uploading in PHP, consider above settings and options in mind and use these very carefully.

What's the maximum size for an upload?

PHP File Uploader is designed to work with up to 2GB files. The reason for the limit is simple - current browsers do not support upload of bigger files than 2GB over internet and IIS also accepts only 2GB files.

| Software | Versions | Upload limit |
|-------------------|--------------|--------------|
| Internet explorer | All versions | 2GB-1 |
| Mozilla Firefox | All versions | 2GB-1 |
| IIS | 1-5 | 2GB-1 |
| IIS | 6 | 4GB-1 |
| ASP | All versions | 2GB-1 |

Requirements

PHP File Uploader is a series of PHP scripts and javascript files that should be copied to your web server. It requires the following:

Web Server Requirements

- Operating System: Linux, Unix, Windows
- Web Server: Apache Web Server, IIS
- Scripting Language: PHP 5.0 or above

Supported Browsers

Ajax Uploader supports all major browsers and platforms (both on PC and Mac, where applicable).

Uplevel Browsers:

- Internet Explorer 5.5+;
- all Gecko-based browsers - Mozilla 1.0+, FireFox, Netscape 7+;
- Opera 8.0+.
- Safari 1.3+

Downlevel browses:

- It will render as a regular PHP upload control.

License Agreement

This section describes our licensing policy for the **PHP File Uploader** product.

By using or installing CuteSoft product, you are agreeing to be bound by the terms and conditions of this License Agreement. As used in this License Agreement, "You" shall mean the individual using or installing the Software together with any individual or entity, including but not limited to your employer, on whose behalf you are acting in using or installing the Software.

1. License Grant

CuteSoft grants to you only, the Licensee, the non-exclusive, nontransferable right to use the Software in accordance with the license you purchase. If you are using this product for your employer, this agreement also includes your employer. You may only use the Software on computers for which the Software is licensed. Software that is distributed as shareware or a demo may be used for testing and evaluation purposes only.

Domain License:

A domain license allows use of the Software for all users at a single site hosted on a single web server.

You may also install and use the Software on an unlimited number of developer workstations (but not on a development server) for use in connection with the same single website host name when accessed by the <http://localhost/Webapplication>

Small Business License:

A small business license allows use of the Software for all users at 10 sites within a single company.

You may also install and use the Software on an unlimited number of developer workstations (but not on a development server) for use in connection with the same single website host name when accessed by the <http://localhost/Webapplication>

Developer License:

A developer license entitles a single developer to install and use the product on one machine.

Developer licenses apply to software components, control or class libraries that are integrated by developers into their applications. All developer products have royalty free runtimes. This means that you may **freely** distribute the product with your application.

Developer Team License:

A developer team license entitles 4 developers to install and use the product.

Developer licenses apply to software components, control or class libraries that are integrated by developers into their applications. All developer products have royalty free runtimes. This means that you may **freely** distribute the product with your application.

Redistribution License:

A Redistribution License allows CuteEditor Control to be distributed within a single commercial application. A Redistribution license entitles unlimited developer to install and use the product.

Enterprise License:

An enterprise License allows use of the Software on Unlimited servers and applications within a single organization. The Enterprise License includes **Royalty FREE** distribution rights.

Source Code License:

The Source code license includes the full PHP and JavaScript code of the control. It includes all of the benefits of the Enterprise license and Redistributable license and is best for companies that plan to modify the control or simply wish to have access to the code for security reasons.

2. Copyright

NOTE: This Software and the accompanying materials are copyrighted and contain proprietary information. Unauthorized copying of the Software or accompanying materials even if modified, merged, or included with other software, or of the written materials, is expressly forbidden. You may be held legally responsible for any infringement of intellectual property rights that is caused or encouraged by your failure to abide by the terms of this Agreement. You may make copies of the Software solely for backup purposes provided the copyright and trademark notices are reproduced in their entirety on the backup copy. CuteSoft reserves all rights not specifically granted to Licensee.

CuteSoft warrants to you that CuteSoft is the sole owner of all patents, copyrights or other applicable intellectual property rights in and to the Software unless otherwise indicated in the documentation for Software. CuteSoft shall defend and hold Licensee harmless from any third party claims for intellectual property infringement for properly licensed Software provided by CuteSoft. The Software and documentation are licensed, not sold, to you. You may not rent, lease, display or distribute copies of the Software to others. You may not disassemble, decompile, reverse engineer, or alter the Software.

3. Warranty & Risks

Although efforts have been made to assure that the Software is date compliant, correct, reliable, and technically accurate, the Software is licensed to you as is and without warranties as to performance of merchantability, fitness for a particular purpose or use, or any other warranties whether expressed or implied. You, your organization and all users of the Software, assume all risks when using it. The

manufacturers, distributors and resellers of the Software shall not be liable for any consequential, incidental, punitive or special damages arising out of the use of or inability to use the Software or the provision of or failure to provide support services, even if we have been advised of the possibility of such damages. In any case, the entire liability under any provision of this agreement shall be limited the amount actually paid by you for the.

4. Technical Support, Product Upgrades and Number of Developer

CuteSoft offers free technical support for a period of 90 days from the date of purchase on all licensed Software products. Technical support is not provided to the end user unless each end user has a valid Single User License. CuteSoft offers product free minor version upgrades. If you later upgrade the Software, this agreement will terminate, and all copies of the Software to which it applies must be destroyed.

5. Controlling Law

This License Agreement shall be governed by and construed in accordance with the laws of the Canada.

Deployment

PHP File Uploader is 100% HTML and JavaScript code on the client, and on the server, and can be setup on your web server in just 5 minutes, following this setup guide.

1. Deploying Uploader Client files.

The "phpuploader" folder and all file it contains (located in the archive) deployed to `http://{your site}/{your application}/phpuploader/` on your w

2. Adding Uploader into PHP page.

```
01. //Step 1: Register Uploader component to your p
02. <?
    php require_once "phpuploader/include_phpupload
    >
03. <html>
04. <body>
05.         <form id="form1" method="POST">
06.             <?php
07.                 //Step 2: Create Uploader objec
08.                 $uploader=new PhpUploader();
09.                 //Step 3: Set a unique name to
10.                 $uploader->Name="myuploader";
11.                 //Step 4: Render Uploader
12.                 $uploader->Render();
13.             ?>
14.         </form>
15.     </body>
16. </html>
```

3. Retrieving uploaded file.

```
01. <?php
02. //Gets the GUID of the file based on uploader n
```

```
03. $fileguid=@$_POST["myuploader"];
04. if($fileguid)
05. {
06.     //get the uploaded file based on GUID
07.     $mvcfile=$uploader->GetUploadedFile($fileguid);
08.     if($mvcfile)
09.     {
10.         //Gets the name of the file.
11.         echo($mvcfile->FileName);
12.         //Gets the temp file path.
13.         echo($mvcfile->FilePath);
14.         //Gets the size of the file.
15.         echo($mvcfile->FileSize);
16.
17.         //Copys the uploaded file to a new location
18.         $mvcfile->CopyTo("/uploads");
19.         //Moves the uploaded file to a new location
20.         $mvcfile->MoveTo("/uploads");
21.         //Deletes this instance.
22.         $mvcfile->Delete();
23.     }
24. }
25. ?>
```

Before You Begin

1. Setting temporary file location

PHP File Uploader streams the data into a temporary file while the data is received. By default PHP File Uploader will use the system temporary directory (`upload_tmp_dir`), which can typically be accessed by all system users. If system temporary directory is not readable or writable by PHP user, you must specify a temporary file location. You should ensure that the PHP user has read/write permission to this specified folder.

You can easily specify the temporary file location using TempDirectory property:

```
01. //Register Uploader component to your page
02. <?
    php require_once "phpuploader/include_phpuploader.php";
    >
03. <html>
04. <body>
05.     <form id="form1" method="POST">
06.         <?php
07.             // Create Uploader object
08.             $uploader=new PhpUploader();
09.             // Set a unique name to the uploader
10.             $uploader->Name="myuploader";
11.             // specify the
            temporary file location using
            TempDirectory property
12.             $uploader->TempDirectory="/mytempfolder";
```

```
3. // Render Uploader
4. $uploader->Render();
5. ?>
6. </form>
7. </body>
8. </html>
```

2. Setting MaxSizeKB

For security purpose, you should specify the limit for the size of uploaded file through MaxDataSize, in kilobytes. This limit can be used to prevent denial of service attacks that are caused, for example, by users uploading large files to the server. The default is no limit.

You can easily specify the maximum allowed size of the file using MaxSizeKB property:

```
01. //Register Uploader component to your page
02. <?php require_once "phpuploader/include_phpuploader.php";
03. <html>
04. <body>
05.     <form id="form1" method="POST">
06.         <?php
07.             // Create Uploader object
08.             $uploader=new PhpUploader();
09.             // Set a unique name to the uploader
10.             $uploader->Name="myuploader";
11.             // Specify the maximum allowed size of the file using
           MaxSizeKB property
12.             $uploader->MaxSizeKB=1024000;
13.             // Render Uploader
14.             $uploader->Render();
```

```
5.      ?>
6.      </form>
7.  </body>
8.  </html>
```

© 2003-2010 CuteSoft.Net. All rights reserved.

Choosing a method to save the uploaded files

There are three ways to handle file uploading with PHP Uploader. You choose based on your application requirements.

Simple Upload

Simple Upload is designed for the simplest usage scenario. It calls the `saveFiles()` method of the control which actually performs the upload. It automatically saves the information POSTed by the browser, figures out how many files are being uploaded, and saves them in a specified local directory on the server under their original names. An attachment table is also created.

```
1. <?php require_once "phpuploader/include_phpuploader.php";
2. <html>
3. <body>
4.     <?php
5.         $uploader=new PhpUploader();
6.         $uploader->Name="myuploader";
7.         $uploader->SaveDirectory="/myfolder";
8.         $uploader->Render();
9.     ?>
10. </body>
11. </html>
```

That's all that's needed. Really!

Standard PHP Upload

If your usage scenario is close to the simplest case, described above, but you need more control, you can use Standard PHP Upload. It allows the PHP developer to save the uploaded files using PHP code. The page posts back to itself to process the files.

```
1. <?php require_once "phpuploader/include_phpuploader.php";
2. <html>
```

```

3. <body>
4.     <form id="form1" method="POST">
5.         <?php
6.             $uploader=new PhpUploader();
7.             $uploader->Name="myuploader";
8.             $uploader->Render();
9.         ?>
10.     </form>
11. <?php
12. //Gets the GUID of the file based on uploader name
13. $fileguid=@$_POST["myuploader"];
14. if($fileguid)
15. {
16.     //get the uploaded file based on GUID
17.     $mvcfile=$uploader->GetUploadedFile($fileguid);
18.     if($mvcfile)
19.     {
20.         //Gets the name of the file.
21.         echo($mvcfile->FileName);
22.         //Gets the temp file path.
23.         echo($mvcfile->FilePath);
24.         //Gets the size of the file.
25.         echo($mvcfile->FileSize);
26.
27.         //Copys the uploaded file to a new location
28.         $mvcfile->CopyTo("/uploads");
29.         //Moves the uploaded file to a new location
30.         $mvcfile->MoveTo("/uploads");
31.         //Deletes this instance.
32.         $mvcfile->Delete();
33.     }
34. }
35. ?>
36. </body>
37. </html>

```

Custom file upload handler

If you need further control over the parsing of the file uploading request custom file upload handler. In handler page (UploadUrl) developers can upload files, process other logics programmatically.

```
01. <?php require_once "phpuploader/include_phpuploa
02. <html>
03. <body>
04.     <?php
05.         $uploader=new PhpUploader();
06.         $uploader->Name="myuploader";
07.         //Create a new file upload handler
08.         $uploader->UploadUrl="myhandler.php"
09.         $uploader->Render();
10.     ?>
11. </body>
12. </html>
```

The following code shows you how to rename the uploaded files, process programmatically in handler page (UploadUrl).

```
01. <?php require_once "phpuploader/include_phpuploa
02. <?php
03.     $uploader=new PhpUploader();
04.
05.     $mvcfile=$uploader->GetValidatingFile();
06.
07.     if($mvcfile->FileName=="accord.bmp")
08.     {
09.         $uploader-
10. >WriteValidationError("My custom error : Invalid
11.
12.         exit(200);
13.     }
14.
15. //USER CODE:
```

```
4.
5.     $targetfilepath= "savefiles/myprefix_" . $m
>FileName;
6.     if( is_file ($targetfilepath) )
7.         unlink($targetfilepath);
8.     $mvcfile->MoveTo( $targetfilepath );
9.
10.    $uploader->WriteValidationOK();
11.
12.    ?>
```

Uploading Multiple Files

PHP File Uploader allows you to select multiple files and upload multiple files.

1. Adding Uploader into PHP page and setting MultipleFilesUpload true.

```
01. //Step 1: Register Uploader component to your p
02. <?php require_once "phpuploader/include_phpuplo
03. <html>
04. <body>
05.     <form id="form1" method="POST">
06.         <?php
07.             //Step 2: Create Uploader objec
08.             $uploader=new PhpUploader();
09.             //Step 3: Set a unique name to
10.             $uploader->Name="myuploader";
11.             //Step 4: Enable Multiple Files
12.             $uploader->MultipleFilesUpload=
13.             //Step 5: Render Uploader
14.             $uploader->Render();
15.         ?>
16.     </form>
17. </body>
18. </html>
```

2. Retrieving all uploaded files.

```
01. <?php
02. //Gets the file GUID list based on uploader nam
03. $fileguidlist=@$_POST["myuploader"];
04. if($fileguidlist)
05. {
06.     $guidlist=split("/", $fileguidlist);
07.     foreach($guidlist as $fileguid)
08.     {
```

```
09.
10. //get the uploaded file based on GUID
11. $mvcfile=$uploader->GetUploadedFile($fi
12.
13. if($mvcfile)
14. {
15.     //Gets the name of the file.
16.     echo($mvcfile->FileName);
17.     //Gets the temp file path.
18.     echo($mvcfile->FilePath);
19.     //Gets the size of the file.
20.     echo($mvcfile->FileSize);
21.
22.     //Copys the uploaded file to a new
23.     $mvcfile->CopyTo("/uploads");
24.     //Moves the uploaded file to a new
25.     $mvcfile->MoveTo("/uploads");
26.     //Deletes this instance.
27.     $mvcfile->Delete();
28. }
29. }
30. ?>
```

Deploying License File

Deploying PHP File Uploader License File

Copy phpuploader.lic to phpuploader\license folder.

© 2003-2010 CuteSoft.Net. All rights reserved.

Create a custom upload button

There are two simple steps to create a custom upload button:

1. Create a HTML button or image button which will be used as the upload button.
2. Use the **InsertButtonID** property to specify the ID of the button which will be used as the upload button.

Example:

```
01. //Step 1: Register Uploader component to your page
02. <?php require_once "phpuploader/include_phpuploader.php";
03. <html>
04. <body>
05.     <form id="form1" method="POST">
06.         <?php
07.             //Step 2: Create Uploader object
08.             $uploader=new PhpUploader();
09.             //Step 3: Set a unique name to the uploader
10.             $uploader->Name="myuploader";
11.             //Step 4: Specify ID of the container
12.             $uploader->InsertButtonID="uploadbutton";
13.             //Step 5: Render Uploader
14.             $uploader->Render();
15.         ?>
16.         <img id="uploadbutton" alt="Upload Image" />
17.     </form>
18. </body>
19. </html>
```

© 2003-2010 CuteSoft.Net. All rights reserved.

Create a custom cancel button

There are two simple steps to create a custom cancel button:

1. Create a HTML button or image button which will be used button.
2. Use the **CancelButtonID** property to specify the ID of the used as the cancel button.

Example:

```
01. //Step 1: Register Uploader component to your page
02. <?php require_once "phpuploader/include_phpuploader.php";
03. <html>
04. <body>
05.     <form id="form1" method="POST">
06.         <?php
07.             //Step 2: Create Uploader object
08.             $uploader=new PhpUploader();
09.             //Step 3: Set a unique name to the uploader
10.             $uploader->Name="myuploader";
11.             //Step 4: Specify ID of the container
12.             $uploader->CancelButtonID="cancelbutton";
13.             //Step 5: Render Uploader
14.             $uploader->Render();
15.         ?>
16.         <img id="uploadercancelbutton" style="display:block; margin:auto; width:100px; height:20px; border:1px solid black; background-color: #f0f0f0; text-align:center; line-height:20px; color:#000080; font-weight:bold; font-size:12px; cursor:pointer;" alt="Cancel button" />
17.     </form>
18. </body>
19. </html>
```

© 2003-2010 CuteSoft.Net. All rights reserved.

Create a custom progress bar panel

There are 4 simple steps to create a custom progress bar panel:

1. Create a panel control which will be used as custom progress bar panel.
2. Create a label control inside panel control. This label control will be used as custom progress text label.
3. Use the **ProgressCtrlID** property to specify the ID of panel control.
4. Use the **ProgressTextID** property to specify the ID of progress text label.

Example:

```
01. //Step 1: Register Uploader component to your page
02. <?php require_once "phpuploader/include_phpuploader.php";
03. <html>
04. <body>
05.     <form id="form1" method="POST">
06.         <?php
07.             //Step 2: Create Uploader object
08.             $uploader=new PhpUploader();
09.             //Step 3: Set a unique name to the uploader
10.             $uploader->Name="myuploader";
11.             //Step 4: Specify the ID of the panel control
12.             $uploader->ProgressCtrlID="uploaderprogresspanel";
13.             //Step 4: Specify the ID of the progress text label
14.             $uploader->ProgressTextID="uploaderprogressstext";
15.             //Step 5: Render Uploader
16.             $uploader->Render();
17.         ?>
18.         <div id="uploaderprogresspanel" style="border: 1px solid
color:orange;border:dashed 2px gray;padding:4px;position: relative;
width: 100%; height: 20px; background-color: #f0f0f0; margin-top: 10px;">
```

```
9.         <span id="uploaderprogresstext"
10.     </span>
11.     </div>
12. </form>
13. </body>
14. </html>
```

Create a custom progress template

You can use the **ProgressTextTemplate** property to create a custom progress template. The default value of this property is:

Uploading %F%. %SEND% of %SIZE% at %KBPS%; %T% seconds remaining

The following table lists the variables to use when creating a progress template.

| Variables | Description |
|------------|-----------------------------------|
| %P% | Total Progress Percent |
| %T% | Estimated Time Remaining(seconds) |
| %F% | Current File Name |
| %SEND% | Uploaded File Size. |
| %SIZE% | Total File Size |
| %KBPS% | Current Upload Speed (KB/sec) |
| %BPS% | Current Upload Speed (B/sec) |
| 
 | Insert a Line Break |

Example:

```
%F%.. %P% %SEND%/ %SIZE% , %KBPS% , %T% seconds left
```

Extending PHP File Uploader with JavaScript API

The goal of this section is to help you to gain comfort working with Uploader's JavaScript APIs.

1. Global Event Handlers

With the following global event handlers you can have multiple PHP File Uploader instances on the page where you can attach the same event handler to code.

- For most functions, returning false would cancel the default behavior.
- Using 'this' you can get the uploader object.

| Events | Description |
|-------------------------------------|---|
| CuteWebUI_AjaxUploader_OnInitialize | Fires when an PHP File Uploader is initialized. |
| CuteWebUI_AjaxUploader_OnStart | Fires when an upload of a specific file is started. |
| CuteWebUI_AjaxUploader_OnStop | Fires when upload is stopped or canceled before postback. |
| CuteWebUI_AjaxUploader_OnPostback | Fires before the page do Postback and fire the FileUploaded event. |
| CuteWebUI_AjaxUploader_OnBrowse | Fires when the upload button is clicked. |
| CuteWebUI_AjaxUploader_OnSelect | Fires when files are selected. |
| CuteWebUI_AjaxUploader_OnProgress | Fires when new information about progress for a specific file is available. |
| CuteWebUI_AjaxUploader_OnQueueUI | Fires when the upload queue is updated. |

Example:

```
//Fires when an PHP File Uploader is fully initialized
function CuteWebUI_AjaxUploader_OnInitialize()
```

```

{
    var hidden=this;
    //warning , using the internalobject is not recommended
    //if you use it, you need test the uploader again
    new version.
    var arr=[];
    for(var p in hidden.internalobject)
    {
        arr.push(p);
    }
    alert("internal object member list : "+arr);
}

//Fires when an upload of a specific file has started
function CutewebUI_AjaxUploader_OnStart()
{
    var hidden=this;
    hidden.internalobject.insertBtn.style.display='block';
}
//Fires when upload is stopped and not do postback
function CutewebUI_AjaxUploader_OnStop()
{
    var hidden=this;
    hidden.internalobject.insertBtn.style.display='block';
}
//Fires before the page doPostBack to server side :
//FileUploaded event.
function CutewebUI_AjaxUploader_OnPostBack()
{
    var hidden=this;
    hidden.internalobject.insertBtn.style.display='block';
    //these files are prepared
    //return false to cancel it..
}
//Fires when the upload button is clicked.
function CutewebUI_AjaxUploader_OnBrowse()
{

```

```

        //return false to cancel it..
    }
    //Fires when files are selected.
    function CutewebUI_AjaxUploader_OnSelect(files)
    {
        //change the files array would take no effect.
        var name=files[0].FileName;
        var size=files[0].FileSize // (or -1)
        //return false to cancel it..
    }
    //Fires when new information about the upload progress of a
    specific file is available.
    function
    CutewebUI_AjaxUploader_OnProgress(enable,filename,bytesloaded,bytes)
    {
        var hidden=this;
        if(enable)
        {
            if(totalsize)
            {
                document.title=filename+" -
"+Math.floor(100*uploadedsize/totalsize)+'%'
            }
            else
            {
            }
        }
        else
        {
        }
        return false; //hide the default UI.
    }
    //Fires when the upload queue table is available.
    function CutewebUI_AjaxUploader_OnQueueUI(list)
    {
        var name=list[0].FileName
        var size=list[0].FileSize // (or -1)
    }

```

```

        var stat=list[0].Status // Finish|Error|Upload|Cancel
        var func=list[0].Cancel;
        //display the
        //return false to hide the default queue table!
    }

```

2. Instance Event Handler

With the following instance event handlers you can attach event handlers to an instance of PHP File Uploader by setting obj.handlexxxxx (lower case).

- For most functions, returning false would cancel the default action.
- Using 'this' you can get the uploader object.

| Events | Description |
|------------------|---|
| handleinitialize | Fires when an PHP File Uploader is fully initialized. |
| handlestart | Fires when an upload of a specific file has started. |
| handlestop | Fires when upload is stopped and not do postback. |
| handlepostback | Fires before the page do PostBack to server side and before the FileUploaded event. |
| handlebrowse | Fires when the upload button is clicked. |
| handleselect | Fires when files are selected. |
| handleprogress | Fires when new information about the upload progress is available. |
| handlequeueui | Fires when the upload queue table is available. |

Example:

```

var hidden=document.getElementById('myuploader')
hidden.handlebrowse=function()
{
    var checkbox=document.getElementById("agreecheckbox")
    if(!checkbox.checked)
    {

```

```
    alert("you must agree the contract")  
    return false;  
  }  
}
```

PHP File Uploader Class Reference

Uploader Class

PHP File Uploader is an easy to use, hi-performance File Upload Control which allows you to upload files to web server without refreshing the page. It allows you select and upload multiple files and cancel running uploads, add new files during uploading.

The look and feel of file upload controls can be customized to seamlessly blend into your website design.

Remarks

PHP File Uploader supports all Internet Explorer versions from 5.5 up on Windows, Firefox 1.0+, Mozilla 1.3+, Netscape 7+, Opera 9.x and Safari (1.3+). This includes Macintosh and Linux. If you attempt to use PHP File Uploader using a browser that is not supported Cute Editor for PHP will render as a regular PHP upload control.

Example

```
01. //Step 1: Register Uploader component to your
02. <?
03. php require_once "phpuploader/include_phpuploa
04. >
05. <html>
06. <body>
07.     <form id="form1" method="POST">
08.         <?php
09.             //Step 2: Create Uploader obje
10.             $uploader=new PhpUploader();
11.             //Step 3: Set a unique name to
12.             $uploader-
```

```
1. >Name="myuploader";  
2. //Step 4: Render Uploader  
3. $uploader->Render();  
4. ?>  
5. </form>  
6. </body>  
7. </html>
```

PHP File Uploader Class Reference

AllowedFileExtensions Property

Gets or sets the allowed file extensions for uploading.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >AllowedFileExtensions="jpeg,jpg,gif,png,zip"
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.ButtonOnClickScript Property

JavaScript code that be executed when the browse button be clicked.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ButtonOnClickScript="myalert()";
11.             $uploader->Render();
12.         ?>
13.         <script>
14.             function myalert()
15.             {
16.                 alert("Hello World");
17.             }
18.         </script>
19.     </form>
20. </body>
21. </html>
```

PHP File Uploader Class Reference

Uploader.CancelAllMsg Property

Gets or sets the "Cancel all Uploads" message.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >CancelAllMsg="Cancel all Uploads";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.CancelButtonID Property

It allows the developers specify a server control to use as the cancel button of PHP File Uploader.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >CancelButtonID="uploadercancelbutton";
11.             $uploader->Render();
12.         ?>
13.         <img id="uploadercancelbutton" sty
14.     </form>
15. </body>
16. </html>
```

PHP File Uploader Class Reference

Uploader.CancelUploadMsg Property

Gets or sets the "Cancel upload" message.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >CancelUploadMsg="Cancel Uploads";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.DialogFilter Property

Gets or sets the current file name filter string, which determines the choices that appear in the file browser dialog box. Please note that only `ValidateOption.AllowedFileExtensions` property determine the allowed file extensions for uploading.

Remarks

For each filtering option, the filter string contains a description of the filter, followed by the vertical bar (|) and the filter pattern. The strings for different filtering options are separated by the vertical bar.

The following is an example of a filter string:

Text files (*.txt)|*.txt|All files (*.*)|*.*

You can add several filter patterns to a filter by separating the file types with semicolons, for example:

Image Files(*.BMP;*.JPG;*.GIF)|*.BMP;*.JPG;*.GIF|All files (*.*)|*.*

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploader.php";
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader->
08.             >Name="myuploader";
09.             $uploader->
08.             >DialogFilter="Images (jpg/gif/png)|*.jpg;*.gif;*.png|All files (*.*)|*.*";
09.             $uploader->Render();
```

```
0.      ?>
1.      </form>
2. </body>
3. </html>
```

[© 2003-2010 CuteSoft.Net. All rights reserved.](#)

PHP File Uploader Class Reference

Uploader.FileTooLargeMsg Property

Gets or sets the "File too large" message.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader->
08.             >Name="myuploader";
09.             $uploader->FileTooLargeMsg="
10.             {0} cannot be uploaded!\n\nFile size ({1})
11.             is too large. The maximum file size allowed
12.             is set to: {2}.";
13.             $uploader->Render();
14.         ?>
15.     </form>
16. </body>
17. </html>
```

PHP File Uploader Class Reference

Uploader.FileTypeNotSupportMsg Property

Gets or sets the "file type not support" message.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >FileTypeNotSupportMsg="This file extension
11. is not allowed! File extensions allowed:
12. '{0}'";
13.             $uploader->Render();
14.         ?>
15.     </form>
16. </body>
17. </html>
```

Uploader.FlashWarningImage Property

Gets or sets the FlashWarning Image.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >FlashWarningImage="Flash10Alert.gif";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.InputboxCSSText Property

Sets or retrieves the appearance of the file input control.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >InputboxCSSText="font-size: 12px;";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.InsertButtonID Property

It allows the developers specify a server control to use as the insert button of PHP File Uploader.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploader.php";
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader->Name="myuploader";
08.             $uploader->InsertButtonID="uploaderbutton";
09.             $uploader->Render();
10.         ?>
11.         <img id="uploaderbutton" alt="Upload File" />
12.     </form>
13. </body>
14. </html>
```

Uploader.InsertText Property

Gets or sets the insert text.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >InsertText="Upload files";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.ManualStartUpload Property

Gets or sets a boolean indicating whether Uploader automatically starts uploading as soon as a user selects a file.

Example Code

```
01. <?
02. php require_once "phpuploader/include_phpuploa
03. >
04. <html>
05.     <head>
06.     <script type="text/javascript">
07.         function doStart()
08.         {
09.             var uploadobj = document.getElementBy
10.             if (uploadobj.getqueuecount() > 0)
11.             {
12.                 uploadobj.startupload();
13.             }
14.             else
15.             {
16.                 alert("Please browse files for up
17.             }
18.         }
19.     }
20.     </script>
21. </head>
22. <body>
23.     <form id="form1" method="POST">
24.         <?php
25.             $uploader=new PhpUploader();
26.             $uploader-
27. >Name="myuploader";
```

```
24.         $uploader-  
25.         >ManualStartUpload=true;  
26.         $uploader->Render();  
27.     ?>  
28.     <button id="submitbutton" onclick:  
29. </form>  
30. </body>  
31. </html>
```

PHP File Uploader Class Reference

Uploader.MaxFilesLimit Property

Gets or sets the maximum number of files that can be uploaded.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader->
08.             >Name="myuploader";
09.             $uploader->MaxFilesLimit=10;
10.             $uploader->Render();
11.         ?>
12.     </form>
13. </body>
14. </html>
```

PHP File Uploader Class Reference

Uploader.MaxFilesLimitMsg Property

Gets or sets the "maximum number of files" message.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >MaxFilesLimitMsg="The maximum number of
11. files allowed to be uploaded is set to
12. {0}.";
13.             $uploader->Render();
14.         ?>
15.     </form>
16. </body>
17. </html>
```

PHP File Uploader Class Reference

Uploader.MaxSizeKB Property

Gets or sets the maximum allowed size of the file, in KB.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader->MaxSizeKB=1024;
10.             $uploader->Render();
11.         ?>
12.     </form>
13. </body>
14. </html>
```

Uploader.MultipleFilesUpload Property

If true, the users are able to select multiple files in the file browser dialog then upload them at once.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >MultipleFilesUpload=true;
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.NumFilesShowCancelAll Property

Specifies the number of files when the CancelAll button appears.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >NumFilesShowCancelAll=2;
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.ProgressBarBackgroundImage Property

Gets or sets the background image for the ProgressBar control.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ProgressBarBackgroundImage="/images/back.gif
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

Uploader.ProgressBarBorderStyle Property

Specifies the border style for the ProgressBar control.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ProgressBarBorderStyle="border:1px solid
11. #444444;";
12.             $uploader->Render();
13.         ?>
14.     </form>
15. </body>
16. </html>
```

PHP File Uploader Class Reference

Uploader.ProgressBarHeight Property

The height of the Progress bar. Default is 15.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ProgressBarHeight=20;
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.ProgressBarStyle Property

Specifies the style that a ProgressBar uses to indicate the progress of an operation.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ProgressBarStyle="Blocks";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.ProgressCtrlID Property

It allows the developers specify a server control to use as the progress control of PHP File Uploader.

Example Code

```
01. <?
02. php require_once "phpuploader/include_phpuploader.php";
03. >
04. <html>
05. <body>
06.         <form id="form1" method="POST">
07.             <?php
08.                 $uploader=new PhpUploader();
09.                 $uploader->Name="myuploader";
10.                 //Specify the ID of the control to use as the progress control
11.                 $uploader->ProgressCtrlID="uploaderprogresspanel";
12.                 //Specify the ID of the control to use as the progress text
13.                 $uploader->ProgressTextID="uploaderprogressstext";
14.                 $uploader->Render();
15.             ?>
16.             <div id="uploaderprogresspanel" style="border: 1px solid
17. color:orange;border:dashed 2px gray;padding:4px">
18.                 <span id="uploaderprogressstext">
19.                     </span>
20.                 </div>
21.             </form>
22. </body>
```

9. </html>

PHP File Uploader Class Reference

Uploader.ProgressInfoStyle Property

The style to be applied to the progress information.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ProgressInfoStyle="padding-
11. left:3px;font:normal 12px Tahoma;";
12.             $uploader->Render();
13.         ?>
14.     </form>
15. </body>
16. </html>
```

PHP File Uploader Class Reference

Uploader.ProgressPanelWidth Property

The width of the Progress Panel. Default is 500.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ProgressPanelWidth=400;
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.ProgressPicture Property

Gets or sets a progress fill picture for the ProgressBar control.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ProgressPicture="/images/ProgressPicture.gif
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.ProgressTextID Property

It allows the developers specify a server control to show the progress text of PHP File Uploader.

Example Code

```
01. <?
02. php require_once "phpuploader/include_phpuploader.php";
03. >
04. <html>
05. <body>
06.     <form id="form1" method="POST">
07.         <?php
08.             $uploader=new PhpUploader();
09.             $uploader->Name="myuploader";
10.             //Specify the ID of the control to show progress
11.             $uploader->ProgressCtrlID="uploaderprogresspanel";
12.             //Specify the ID of the control to show progress text
13.             $uploader->ProgressTextID="uploaderprogressstext";
14.             $uploader->Render();
15.         ?>
16.         <div id="uploaderprogresspanel" style="border:1px solid
17. color:orange;border:dashed 2px gray;padding:4px">
18.             <span id="uploaderprogressstext">
19.             </span>
20.         </div>
21.     </form>
22. </body>
```

9. </html>

[© 2003-2010 CuteSoft.Net. All rights reserved.](#)

PHP File Uploader Class Reference

Uploader.ProgressTextTemplate Property

Gets or sets the progress text template. %P% = percent,%T% = seconds remain,%F% = filename. %SEND% = uploaded size , %SIZE% = file size , %KBPS% means KB/s , %KBPS% = B/s For example : %F%.. %P% %SEND%/ %SIZE% , %KBPS% , %T% seconds left.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ProgressTextTemplate="%F%.. %P%
11. %SEND%/ %SIZE% , %KBPS% , %T% seconds left.";
12.             $uploader->Render();
13.         ?>
14.     </form>
15. </body>
16. </html>
```

PHP File Uploader Class Reference

Uploader.SaveDirectory Property

Specifies the directory on the server to save the uploaded file to.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >SaveDirectory="/myfolder";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.ShowFrameBrowseButton Property

Gets or sets a boolean indicating whether Uploader should render a browse button for FireFox/Opera in Iframe Mode.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ShowFrameBrowseButton=true;
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.ShowProgressBar Property

Gets or sets a value indicating whether the progress bar is displayed. The UploadModule must be installed to use this feature.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ShowProgressBar=true;
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.ShowProgressInfo Property

Gets or sets a value indicating whether the progress information is displayed when uploading. The UploadModule must be installed to use this feature.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >ShowProgressInfo=true;
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.TempDirectory Property

Specifies where AjaxUploader should put the temporary files.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >TempDirectory="/myTempDirectory";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.UploadCursor Property

Specifies the upload button built in cursor types.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader->UploadCursor
10. ="Hand";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

Members

| Member Name | Description |
|--------------|-------------------------------------|
| Auto | Default. The browser sets a cursor. |
| Arrow | A standard arrow cursor. |
| Hand | A hand cursor. |

Uploader.UploadingMsg Property

Gets or sets the "Uploading.." message.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >UploadingMsg="Uploading..";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.UploadProcessingMsg Property

Gets or sets the "upload is processing" message.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >UploadProcessingMsg="Processing....";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.UploadType Property

The global type of upload method to use.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploader.php";
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader->
08. >Name="myuploader";
09.             $uploader->
10. >UploadType="Iframe";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

Members

| Member Name | Description |
|--------------------|--|
| Auto | Determines browser capabilities and chooses the most appropriate method to upload. |
| Flash | Uses an enhanced file dialog facilitated by a Flash object. |
| Silverlight | Uses an enhanced file dialog facilitated by a Silverlight object. |
| IFrame | Uses a standard IFrame technique to provide |

upload functionality without requiring the
Flash plugin.

PHP File Uploader Class Reference

Uploader.WindowsDialogLimitMsg Property

Gets or sets the message for windows file browse dialog 32K file name length limitation.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader-
10. >WindowsDialogLimitMsg="Unable to select so
    many files at once.";
11.             $uploader->Render();
12.         ?>
13.     </form>
14. </body>
15. </html>
```

PHP File Uploader Class Reference

Uploader.Render Method

Render the Uploader on the client.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader-
08. >Name="myuploader";
09.             $uploader->Render();
10.         ?>
11.     </form>
12. </body>
13. </html>
```

PHP File Uploader Class Reference

Uploader.GetString Method

This function returns what the Render function used to write to the response buffer as a string.

Example Code

```
01. <?
    php require_once "phpuploader/include_phpuploa
    >
02. <html>
03. <body>
04.     <form id="form1" method="POST">
05.         <?php
06.             $uploader=new PhpUploader();
07.             $uploader->
08. >Name="myuploader";
09.             echo $uploader->GetString();
10.         ?>
11.     </form>
12. </body>
13. </html>
```

PHP File Uploader Class Reference

PhpUploadFile Class

Provides data for the uploaded files.

PHP File Uploader Class Reference

PhpUploadFile

The properties of the **PhpUploadFile** class are listed below.

Public Instance Properties

| | |
|--|----------------------------|
|  FileGuid | Gets the GUID of the file. |
|  FileName | Gets the name of the file. |
|  FileSize | Gets the size of the file. |

[© 2003-2010 CuteSoft.Net. All rights reserved.](#)

PHP File Uploader Class Reference

PhpUploadFile.FileGuid Property

Gets the GUID of the file.

Example Code

```
01. <?php
02. //Gets the GUID of the file based on uploader
03. $fileguid=@$_POST["myuploader"];
04. if($fileguid)
05. {
06.     //get the uploaded file based on GUID
07.     $mvcfile=$uploader->
08.     >GetUploadedFile($fileguid);
09.     if($mvcfile)
10.     {
11.         //Gets the GUID of the file.
12.         echo($mvcfile->FileGuid);
13.     }
14. }
15. ?>
```

PHP File Uploader Class Reference

PhpUploadFile.FileName Property

Gets the name of the file.

```
01. <?php
02. //Gets the GUID of the file based on uploader
03. $fileguid=@$_POST["myuploader"];
04. if($fileguid)
05. {
06.     //get the uploaded file based on GUID
07.     $mvcfile=$uploader-
08. >GetUploadedFile($fileguid);
09.     if($mvcfile)
10.     {
11.         //Gets the name of the file.
12.         echo($mvcfile->FileName);
13.     }
14. }
15. ?>
```

PHP File Uploader Class Reference

PhpUploadFile.FileSize Property

Gets the size of the file.

```
01. <?php
02. //Gets the GUID of the file based on uploader
03. $fileguid=@$_POST["myuploader"];
04. if($fileguid)
05. {
06.     //get the uploaded file based on GUID
07.     $mvcfile=$uploader-
08. >GetUploadedFile($fileguid);
09.     if($mvcfile)
10.     {
11.         //Gets the size of the file.
12.         echo($mvcfile->FileSize);
13.     }
14. }
15. ?>
```

PHP File Uploader Class Reference

PhpUploadFile.FilePath Property

Gets the temp file path.

```
01. <?php
02. //Gets the GUID of the file based on uploader
03. $fileguid=@$_POST["myuploader"];
04. if($fileguid)
05. {
06.     //get the uploaded file based on GUID
07.     $mvcfile=$uploader-
08. >GetUploadedFile($fileguid);
09.     if($mvcfile)
10.     {
11.         //Gets the name of the file.
12.         echo($mvcfile->FileName);
13.         //Gets the temp file path.
14.         echo($mvcfile->FilePath);
15.         //Gets the size of the file.
16.         echo($mvcfile->FileSize);
17.
18.         //Copys the uploaded file to a new lo
19.
20.         $mvcfile->CopyTo("/uploads");
21.         //Moves the uploaded file to a new lo
22.
23.         $mvcfile->MoveTo("/uploads");
24.         //Deletes this instance.
25.         $mvcfile->Delete();
26.     }
27. }
28. ?>
```

PHP File Uploader Class Reference

CuteWebUI Namespace

CuteWebUI is a collection of classes that allow you to create Web server controls on an ASP.NET Web page.

[Namespace hierarchy](#)

Classes

| Class | Description |
|--|--|
| AttachmentItem | This class represents an Attachment Item |
| AttachmentItemCollection | This class represents/maintains a collection |
| AttachmentItemEventArgs | Event parameters used for events (AttachmentCheckChanged, AttachmentC that take an Item as one of its arguments. |
| PersistedFile | This class represents a Single File object. |
| PersistedFileEventArgs | Provides data for the FileChanged events |
| UploadAttachments | This class allows you upload multiple files added to the list of attachments. Just the v |
| Uploader | This class represents an enhanced control |
| UploaderBase | The base class defines the properties, me UploadPersistedFile and UploadAttachme |
| PhpUploadFile | Provides data for the FileValidating and F |
| UploaderLicenseException | |
| UploaderLicenseProvider | UploaderLicenseProvider |
| UploaderProvider | This abstract class represents a Uploader |
| UploaderValidateOption | A helper class which can be used to hold Uploader. |
| UploadFileBase | Represents an UploadFileBase object. |
| UploadModule | This class represents an Upload Module c |
| UploadPersistedFile | This class represents an enhanced control |

| persist across postbacks.

Interfaces

| Interface | Description |
|-------------------------------------|---|
| IAttachmentProvider | Represents an interface for an Attachment Provider. |

Delegates

| Delegate | Description |
|--|---|
| AttachmentItemEventHandler | Represents the method that will handle Attachment control events. |
| PersistedFileEventHandler | Represents the method that will handle Uploader control events. |
| UploaderEventHandler | Represents the method that will handle Uploader control events. |

Enumerations

| Enumeration | Description |
|--|---|
| AttachmentItemBehavior | |
| AttachmentItemTemplatePosition | Specifies the Attachment Item Template Position. |
| EnumUploaderLicense | |
| ProgressBarType | Specifies the style that a ProgressBar uses to indicate the progress of an operation. |
| UploaderAdvancedOption | This enumeration is used by Uploader.SetAdvancedOption. |
| UploadType | The global type of upload method to use. |

PHP File Uploader Class Reference

AttachmentItem Class

This class represents an Attachment Item.

For a list of all members of this type, see [AttachmentItem Members](#).

[System.Object](#) [System.Web.UI.Control](#)

CuteWebUI.AttachmentItem

```
[Visual Basic]
Public Class AttachmentItem
    Inherits Control
    Implements INamingContainer,
               IPostBackEventHandler
```

```
[C#]
public class AttachmentItem : Control,
    INamingContainer, IPostBackEventHandler
```

Thread Safety

Public static (**Shared** in Visual Basic) members of this type are safe for multithreaded operations. Instance members are **not** guaranteed to be thread-safe.

Requirements

Namespace: [CuteWebUI](#)

Assembly: CuteWebUI.AjaxUploader (in CuteWebUI.AjaxUploader.dll)

See Also

PHP File Uploader Class Reference

AttachmentItemCollection Class

This class represents/maintains a collection of Attachment items.

For a list of all members of this type, see [AttachmentItemCollection Members](#).

[System.Object](#) **CuteWebUI.AttachmentItemCollection**

```
[Visual Basic]
Public Class AttachmentItemCollection
    Implements ICollection, IEnumerable
```

```
[C#]
public class AttachmentItemCollection :
    ICollection, IEnumerable
```

Thread Safety

Public static (**Shared** in Visual Basic) members of this type are safe for multithreaded operations. Instance members are **not** guaranteed to be thread-safe.

Requirements

Namespace: [CuteWebUI](#)

Assembly: CuteWebUI.AjaxUploader (in CuteWebUI.AjaxUploader.dll)

PHP File Uploader Class Reference

UploadModule Class

This class represents an Upload Module object.

For a list of all members of this type, see [UploadModule Members](#).

[System.Object](#) **CuteWebUI.UploadModule**

```
[Visual Basic]  
Public Class UploadModule  
    Implements IHttpModule
```

```
[C#]  
public class UploadModule : IHttpModule
```

Thread Safety

Public static (**Shared** in Visual Basic) members of this type are safe for multithreaded operations. Instance members are **not** guaranteed to be thread-safe.

Requirements

Namespace: [CuteWebUI](#)

Assembly: CuteWebUI.AjaxUploader (in CuteWebUI.AjaxUploader.dll)

See Also

PHP File Uploader Class Reference

UploadPersistedFile Class

This class represents an enhanced control for uploading files to the server. The object can persist across postbacks.

For a list of all members of this type, see [UploadPersistedFile Members](#).

[System.Object](#) [System.Web.UI.Control](#)

[CuteWebUI.UploaderBase](#)

[CuteWebUI.Uploader](#)

[CuteWebUI.UploadFileBase](#)

CuteWebUI.UploadPersistedFile

```
[Visual Basic]
Public Class UploadPersistedFile
    Inherits UploadFileBase
```

```
[C#]
public class UploadPersistedFile :
    UploadFileBase
```

Thread Safety

Public static (**Shared** in Visual Basic) members of this type are safe for multithreaded operations. Instance members are **not** guaranteed to be thread-safe.

Requirements

Namespace: [CuteWebUI](#)

Assembly: CuteWebUI.AjaxUploader (in CuteWebUI.AjaxUploader.dll)

PHP File Uploader Class Reference

IAttachmentProvider Interface

Represents an interface for an Attachment Provider.

For a list of all members of this type, see [IAttachmentProvider Members](#).

```
[Visual Basic]  
Public Interface IAttachmentProvider
```

```
[C#]  
public interface IAttachmentProvider
```

Requirements

Namespace: [CuteWebUI](#)

Assembly: CuteWebUI.AjaxUploader (in CuteWebUI.AjaxUploader.dll)

PHP File Uploader Class Reference

AttachmentItemEventHandler Delegate

Represents the method that will handle Attachment control events.

```
[Visual Basic]
Public Delegate Sub AttachmentItemEventHandler(
    _
    ByVal sender As Object, _
    ByVal args As AttachmentItemEventArgs _
)
```

```
[C#]
public delegate void AttachmentItemEventHandler(
    object sender,
    AttachmentItemEventArgs args
);
```

PHP File Uploader Class Reference

ProgressBarType Enumeration

Specifies the style that a ProgressBar uses to indicate the progress of an operation.

```
[Visual Basic] Public Enum ProgressBarType
```

```
[C#]  
public enum ProgressBarType
```

Members

| Member Name | Description |
|-------------------|---|
| Blocks | Indicates progress by increasing the number of segmented blocks in a ProgressBar. |
| Continuous | Indicates progress by increasing the size of a smooth, continuous bar in a ProgressBar. |

Requirements

Namespace: [CuteWebUI](#)

Assembly: CuteWebUI.AjaxUploader (in CuteWebUI.AjaxUploader.dll)

UploaderAdvancedOption Enumeration

This enumeration is used by Uploader.SetAdvancedOption.

```
[Visual Basic]  
Public Enum UploaderAdvancedOption
```

```
[C#]  
public enum UploaderAdvancedOption
```

Members

| Member Name | Description |
|---------------|---|
| NoSilverlight | Disables Silverlight. |
| NoFlash | Disables Flash. |
| NoFlash10 | Disables Flash version 10. |
| NoFlash89 | Disables Flash version 8 and version 9. |
| NoFlash8 | Disables Flash version 8. |
| NoFlash9 | Disables Flash version 9. |

PHP File Uploader Class Reference

UploadType Enumeration

The global type of upload method to use.

```
[Visual Basic] Public Enum UploadType
```

```
[C#]  
public enum UploadType
```

Members

| Member Name | Description |
|--------------------|--|
| Auto | Determines browser capabilities and chooses the most appropriate method to upload. |
| Flash | Uses an enhanced file dialog facilitated by a Flash object. |
| Silverlight | Uses an enhanced file dialog facilitated by a Silverlight object. |
| IFrame | Uses a standard IFrame technique to provide upload functionality without requiring the Flash/Silverlight plugin. |

PHP File Uploader Class Reference

UploaderEventArgs Constructor (UploaderBase, Guid)

Initializes a new instance of the [PhpUploadFile](#) class.

```
[Visual Basic] Overloads Public Sub New( _  
    ByVal uploader As UploaderBase, _  
    ByVal guid As Guid _  
)
```

```
[C#]  
public UploaderEventArgs(  
    UploaderBase uploader,  
    Guid guid  
);
```

Parameters

uploader

The uploader.

guid

The GUID.

AttachmentItem Members

[AttachmentItem overview](#)

Public Instance Properties

| | |
|--|---|
|  BindingContainer (inherited from Control) | |
|  Checked | Gets or sets a value indicating whether this AttachmentItem is checked. |
|  ClientID (inherited from Control) | |
|  Controls (inherited from Control) | |
|  DataItem | Gets the data item. |
|  EnableViewState (inherited from Control) | |
|  FileGuid | Gets the file GUID. |
|  FileName | Gets the name of the file. |
|  FileSize | Gets the size of the file. |
|  ID (inherited from Control) | |
|  IsCustom | Gets a value indicating whether this instance is custom. |
|  NamingContainer (inherited from Control) | |
|  Page (inherited from Control) | |
|  Parent (inherited from Control) | |
|  ShouldSave | Gets a value indicating whether the item is checked and not a custom item. |

| | |
|--|--|
|  Site (inherited from Control) | |
|  TemplateSourceDirectory (inherited from Control) | |
|  UniqueID (inherited from Control) | |
|  Visible (inherited from Control) | |

Public Instance Methods

| | |
|--|--|
|  ChangeToCustom | Changes this instance to a custom item. |
|  CopyTo | Copys the uploaded file to a new location. |
|  DataBind (inherited from Control) | |
|  Delete | Deletes this instance. |
|  Dispose (inherited from Control) | |
|  Equals (inherited from Object) | |
|  FindControl (inherited from Control) | Overloaded. |
|  GetHashCode (inherited from Object) | |
|  GetTempFilePath | Gets the temp file path. |
|  GetType (inherited from Object) | |
|  HasControls (inherited from Control) | |
|  HideAndUncheck | Same as the 'remove' button , just hide and uncheck this item. |

| | |
|--|---|
|  MoveTo | Moves the uploaded file to a new location. |
|  OpenStream | |
|  Remove | Removes this instance from collection but do not delete it. |
|  RenderControl (inherited from Control) | |
|  ResolveUrl (inherited from Control) | |
|  SetRenderMethodDelegate (inherited from Control) | |
|  ToString (inherited from Object) | |

Public Instance Events

| | |
|---|--|
|  DataBinding (inherited from Control) | |
|  Disposed (inherited from Control) | |
|  Init (inherited from Control) | |
|  Load (inherited from Control) | |
|  PreRender (inherited from Control) | |
|  Unload (inherited from Control) | |

Protected Instance Properties

| | |
|---|--|

|  Context (inherited from Control) | |
| | |

| | |
|---|--|
|  Events (inherited from Control) | |
|  HasChildViewState (inherited from Control) | |
|  IsTrackingViewState (inherited from Control) | |
|  ViewState (inherited from Control) | |
|  ViewStateIgnoresCase (inherited from Control) | |

Protected Instance Methods

| | |
|--|-------------|
|  AddParsedSubObject (inherited from Control) | |
|  BuildProfileTree (inherited from Control) | |
|  ClearChildViewState (inherited from Control) | |
|  CreateChildControls (inherited from Control) | |
|  CreateControlCollection (inherited from Control) | |
|  EnsureChildControls (inherited from Control) | |
|  Finalize (inherited from Object) | |
|  FindControl (inherited from Control) | Overloaded. |
|  InitProperties | |
|  IsLiteralContent (inherited from Control) | |

| | |
|---|---|
|  LoadViewState | |
|  MapPathSecure (inherited from Control) | |
|  MemberwiseClone (inherited from Object) | |
|  OnBubbleEvent (inherited from Control) | |
|  OnDataBinding | Raises the DataBinding event. |
|  OnInit (inherited from Control) | |
|  OnLoad (inherited from Control) | |
|  OnPreRender (inherited from Control) | |
|  OnUnload (inherited from Control) | |
|  RaiseBubbleEvent (inherited from Control) | |
|  Render | |
|  RenderChildren (inherited from Control) | |
|  SaveViewState | |
|  TrackViewState (inherited from Control) | |

Protected Internal Instance Constructors

| | |

AttachmentItemCollection Members

[AttachmentItemCollection overview](#)

Public Instance Properties

| | |
|--|--|
|  Count | Gets the number of elements contained in the ICollection . |
|  IsSynchronized | Gets a value indicating whether access to the ICollection is synchronized (thread safe). |
|  Item | Gets the AttachmentItem at the specified index. |
|  SyncRoot | Gets an object that can be used to synchronize access to the ICollection . |

Public Instance Methods

| | |
|---|---|
|  Add | Adds the specified filesize. |
|  CopyTo | Copies the elements of the ICollection to an Array , starting at a particular Array index. |
|  Equals (inherited from Object) | |
|  GetEnumerator | Returns an enumerator that iterates through a collection. |
|  GetHashCode (inherited from Object) | |
|  GetType (inherited from Object) | |
|  ToArray | Toes the array. |
|  ToString (inherited from Object) | |

Protected Instance Methods

| | |
|--|--|
| | |
|--|--|

| | |
|---|--|
|  Finalize (inherited from Object) | |

PHP File Uploader Class Reference

UploadAttachments Members

[UploadAttachments overview](#)

Public Instance Constructors

| | |
|---|--|
|  UploadAttachments Constructor | Initializes a new instance of the UploadAttachments class. |
|---|--|

Public Instance Properties

| | |
|--|--|
|  ActionButtonBehavior | Specify the default behavior when use the remove button on an attachment i |
|  ActionButtonText | Gets or sets Action Button Text. |
|  AttachmentTableStyle | Specifies the style for the attachment |
|  AttachmentTRStyle | Specifies the style for rows of the attachment table. |
|  AutoUseSystemTempFolder (inherited from UploaderBase) | A system temporary folder or temporary directory is a directory used to hold temporary files. By default, when PHP Uploader detects TempDirectory property not set, it will automatically use the system temporary folder. If web.config specifies TempDirectory appSetting, this would take effects. You can turn this feature setting it to "false". |
|  BindingContainer (inherited from Control) | |
|  ButtonOnClickScript (inherited from UploaderBase) | JavaScript code that be executed when browse button be clicked. |
|  CancelAllMsg (inherited from UploaderBase) | Gets or sets the "Cancel all Uploads" message. |
|  CancelButton (inherited from Uploader) | |

| | |
|---|--|
|  CancelButtonID (inherited from UploaderBase) | It allows the developers specify a server control to use as the cancel button of File Uploader. |
|  CancelButtonStyle (inherited from Uploader) | Gets the cancel button style. |
|  CancelText (inherited from Uploader) | Gets or sets the cancel text. |
|  CancelUploadMsg (inherited from UploaderBase) | Gets or sets the "Cancel upload" message. |
|  ClientID (inherited from Control) | |
|  Controls (inherited from Control) | |
|  CustomProvider | Gets or sets the custom provider. |
|  DialogFilter (inherited from UploaderBase) | Gets or sets the current file name filter string, which determines the choices that appear in the file browser dialog box. Please note that only <code>ValidateOption.AllowedFileExtensions</code> property determine the allowed file extensions for uploading. |
|  DirtyText (inherited from UploadFileBase) | Gets or sets the dirty text. |
|  EnableViewState (inherited from Control) | |
|  FileTooLargeMsg (inherited from UploaderBase) | Gets or sets the "File too large" message. |
|  FileTypeNotSupportMsg (inherited from UploaderBase) | Gets or sets the "file type not support" message. |
|  FlashUploadPage (inherited from UploaderBase) | set a special page for Flash - Integrated Windows Authentication should be allowed |

| | |
|---|--|
| | to web.config appSettings : CuteWebUI.AjaxUploader.FlashUploa (CuteEditor.AjaxUploader.FlashUploa for CuteEditor) |
|  FlashWarningImage (inherited from UploaderBase) | Gets or sets the FlashWarning Image |
|  HeaderRowStyle | Gets the header row style. |
|  HideNoItemTable | Gets or sets a value indicating whether [hide no item table]. |
|  ID (inherited from Control) | |
|  InputboxCSSText (inherited from UploaderBase) | Sets or retrieves the appearance of the input control. |
|  InsertButton (inherited from Uploader) | |
|  InsertButtonID (inherited from UploaderBase) | It allows the developers specify a server control to use as the insert button of the File Uploader. |
|  InsertButtonStyle (inherited from Uploader) | Gets the insert button style. |
|  InsertText | Gets or sets the insert text. |
|  ItemCellStyle | Gets the item cell style. |
|  ItemCheckStyle | Gets the item check style. |
|  ItemLabelStyle (inherited from UploadFileBase) | Gets the item label style. |
|  Items | Get the uploaded files list. |
|  ItemTemplate | |
|  ItemTemplatePosition | Gets or sets the item template position. |
|  ItemTextTemplate (inherited from UploadFileBase) | Gets or sets the item text template. |

| | |
|---|--|
|  ManualStartUpload (inherited from UploaderBase) | Gets or sets a boolean indicating whe Uploader automatically starts uploadi soon as a user selects a file. |
|  MaxFilesLimit (inherited from UploaderBase) | Gets or sets the maximum number of that can be uploaded. |
|  MaxFilesLimitMsg (inherited from UploaderBase) | Gets or sets the "File too large" mess |
|  MultipleFilesUpload | |
|  NamingContainer (inherited from Control) | |
|  NumFilesShowCancelAll (inherited from UploaderBase) | |
|  Page (inherited from Control) | |
|  Parent (inherited from Control) | |
|  ProgressBarBackgroundImage (inherited from UploaderBase) | Gets or sets the background image fo ProgressBar control. |
|  ProgressBarBorderStyle (inherited from UploaderBase) | Specifies the border style for the ProgressBar control. |
|  ProgressBarHeight (inherited from UploaderBase) | The height of the Progress bar. Defau 15. |
|  ProgressBarStyle (inherited from UploaderBase) | Specifies the style that a ProgressBar to indicate the progress of an operatic |
|  ProgressCtrlID (inherited from UploaderBase) | It allows the developers specify a sen control to use as the progress control PHP File Uploader. |

| | |
|--|--|
|  ProgressInfoStyle (inherited from UploaderBase) | The style to be applied to the progress information. |
|  ProgressLabel (inherited from Uploader) | |
|  ProgressLabelStyle (inherited from Uploader) | Gets the progress label style. |
|  ProgressPanel (inherited from Uploader) | |
|  ProgressPanelStyle (inherited from Uploader) | Gets the progress panel style. |
|  ProgressPanelWidth (inherited from UploaderBase) | The width of the Progress Panel. Default 500. |
|  ProgressPicture (inherited from UploaderBase) | Gets or sets a progress fill picture for ProgressBar control. |
|  ProgressTextID (inherited from UploaderBase) | It allows the developers specify a server control to show the progress text of P File Uploader. |
|  ProgressTextTemplate (inherited from UploaderBase) | Gets or sets the progress text template %P% = percent,%T% = seconds remain,%F% = filename. %SEND% = uploaded size , %SIZE% = file size , %KBPS% means KB/s , %KBPS% = For example : %F%.. %P% %SEND%/ %SIZE% , %KBPS% , %T% seconds left. |
|  RemoveButtonBehavior | Specify the default behavior when use the remove button on an attachment |
|  RemoveButtonText | Gets or sets Remove Button Text. |
|  ShowActionButtons | Gets or sets a value indicating whether [show Action icons]. |
| | |

| | |
|--|--|
|  ShowCheckBoxes | Gets or sets a value indicating whether [show checkboxes]. |
|  ShowFileIcons | Gets or sets a value indicating whether [show file icons]. |
|  ShowFrameBrowseButton (inherited from UploaderBase) | Gets or sets a boolean indicating whether Uploader should render a browse button for FireFox/Opera in Iframe Mode. |
|  ShowProgressBar (inherited from UploaderBase) | Gets or sets a value indicating whether progress bar is displayed. The UploadModule must be installed to use this feature. |
|  ShowProgressInfo (inherited from UploaderBase) | Gets or sets a value indicating whether progress information is displayed while uploading. The UploadModule must be installed to use this feature. |
|  ShowRemoveButtons | Gets or sets a value indicating whether [show Remove icons]. |
|  ShowTableHeader | Specifies whether the Table Header is displayed. |
|  Site (inherited from Control) | |
|  TableHeaderTemplate | Gets or sets the table header template. |
|  TableStyle | Gets the table style. |
|  TempDirectory (inherited from UploaderBase) | Specifies where AjaxUploader should store the temporary files. |
|  TemplateSourceDirectory (inherited from Control) | |
|  UniqueID (inherited from Control) | |
|  UploadingMsg (inherited from UploaderBase) | Gets or sets the "Uploading.." message. |
|  UploadProcessingMsg (inherited from UploaderBase) | Gets or sets the "upload is processing" message. |

| | |
|---|---|
| UploaderBase) | |
|  UploadType (inherited from UploaderBase) | The global type of upload method to u |
|  ValidateOption (inherited from UploaderBase) | Gets the validate option. |
|  Visible (inherited from Control) | |
|  WindowsDialogLimitMsg (inherited from UploaderBase) | Gets or sets the message for window: browse dialog 32K file name length limitation. |

Public Instance Methods

| | |
|---|------------------------------------|
|  AddCustomAttachment | Adds the custom attachment. |
|  DataBind (inherited from Control) | |
|  DeleteAllAttachments | Deletes all attachments. |
|  DeleteAttachment | Deletes the specified attachment. |
|  DeleteUncheckedAttachments | Deletes the unchecked attachments. |
|  Dispose (inherited from Control) | |
|  Equals (inherited from Object) | |
|  FindControl (inherited from Control) | Overloaded. |
|  GetAdvancedOption (inherited from UploaderBase) | Overloaded. |
|  GetAttachmentCount | Gets the attachment count. |
|  GetHashCode (inherited from Object) | |
| | |

| | |
|---|---|
|  GetItemsTable | Get the table for items. |
|  GetType (inherited from Object) | |
|  GetUploaderProvider (inherited from UploaderBase) | Gets the uploader provider instance to handle file data. |
|  HasControls (inherited from Control) | |
|  RenderControl (inherited from Control) | |
|  ResolveUrl (inherited from Control) | |
|  SetAdvancedOption (inherited from UploaderBase) | Overloaded. |
|  SetRenderMethodDelegate (inherited from Control) | |
|  ToString (inherited from Object) | |
|  Upload (inherited from UploaderBase) | Overloaded. Use server file to simulate file uploading and uploaded event. This method affects all child types. |

Public Instance Events

| | |
|---|--|
|  AttachmentActionClicked | Occurs when the user click the item action button. |
|  AttachmentAdded | Occurs when attachment be uploaded. |
|  AttachmentCheckChanged | Occurs when attachment check changed. |
|  AttachmentCreated | Occurs when attachment control created. |
| | |

| | |
|--|--|
|  AttachmentDataBound | Occurs when attachment control data bound. |
|  AttachmentHided | Occurs when the user click the item remove button. |
|  AttachmentRemoveClicked | Occurs when the user click the item remove button. |
|  DataBinding (inherited from Control) | |
|  Disposed (inherited from Control) | |
|  FileUploaded (inherited from UploaderBase) | fired when a file are uploaded and validated |
|  FileValidating (inherited from UploaderBase) | attach custom code to validate the uploading file |

PHP File Uploader Class Reference

UploadFileBase Members

[UploadFileBase overview](#)

Public Instance Properties

| | |
|--|--|
|  AutoUseSystemTempFolder (inherited from UploaderBase) | A system temporary folder or temporary directory is a directory used to hold temporary files. By default, when PHP Uploader detects TempDirectory property not set, it will automatically use the system temporary folder. If web.config specifies TempDirectory appSetting, this would take effects. You can turn this feature setting it to "false". |
|  BindingContainer (inherited from Control) | |
|  ButtonOnClickScript (inherited from UploaderBase) | JavaScript code that be executed when browse button be clicked. |
|  CancelAllMsg (inherited from UploaderBase) | Gets or sets the "Cancel all Uploads" message. |
|  CancelButton (inherited from Uploader) | |
|  CancelButtonID (inherited from UploaderBase) | It allows the developers specify a server control to use as the cancel button of File Uploader. |
|  CancelButtonStyle (inherited from Uploader) | Gets the cancel button style. |
|  CancelText (inherited from Uploader) | Gets or sets the cancel text. |
|  CancelUploadMsg (inherited from UploaderBase) | Gets or sets the "Cancel upload" message. |
|  ClientID (inherited from | |

| | |
|---|--|
| Control) | |
|  Controls (inherited from Control) | |
|  DialogFilter (inherited from UploaderBase) | Gets or sets the current file name filter string, which determines the choices that appear in the file browser dialog box. Please note that only <code>ValidateOption.AllowedFileExtensions</code> property determine the allowed file extensions for uploading. |
|  DirtyText | Gets or sets the dirty text. |
|  EnableViewState (inherited from Control) | |
|  FileTooLargeMsg (inherited from UploaderBase) | Gets or sets the "File too large" message. |
|  FileTypeNotSupportMsg (inherited from UploaderBase) | Gets or sets the "file type not supported" message. |
|  FlashUploadPage (inherited from UploaderBase) | set a special page for Flash - Integrating Windows Authentication should be also to web.config appSettings : <code>CuteWebUI.AjaxUploader.FlashUploadPage</code> (CuteEditor.AjaxUploader.FlashUploadPage for CuteEditor) |
|  FlashWarningImage (inherited from UploaderBase) | Gets or sets the FlashWarning Image |
|  ID (inherited from Control) | |
|  InputboxCSSText (inherited from UploaderBase) | Sets or retrieves the appearance of the input control. |
|  InsertButton (inherited from Uploader) | |

| | |
|---|--|
|  InsertButtonID (inherited from UploaderBase) | It allows the developers specify a server control to use as the insert button of File Uploader. |
|  InsertButtonStyle (inherited from Uploader) | Gets the insert button style. |
|  InsertText (inherited from Uploader) | Gets or sets the insert text. |
|  ItemLabelStyle | Gets the item label style. |
|  ItemTextTemplate | Gets or sets the item text template. |
|  ManualStartUpload (inherited from UploaderBase) | Gets or sets a boolean indicating whether Uploader automatically starts uploading soon as a user selects a file. |
|  MaxFilesLimit (inherited from UploaderBase) | Gets or sets the maximum number of files that can be uploaded. |
|  MaxFilesLimitMsg (inherited from UploaderBase) | Gets or sets the "File too large" message. |
|  MultipleFilesUpload (inherited from UploaderBase) | If true, the users are able to select multiple files in the file browser dialog then upload them at once. |
|  NamingContainer (inherited from Control) | |
|  NumFilesShowCancelAll (inherited from UploaderBase) | |
|  Page (inherited from Control) | |
|  Parent (inherited from Control) | |
|  ProgressBarBackgroundImage (inherited from ProgressBar) | Gets or sets the background image for ProgressBar control. |

| | |
|---|---|
| UploaderBase) | |
|  ProgressBarBorderStyle (inherited from UploaderBase) | Specifies the border style for the ProgressBar control. |
|  ProgressBarHeight (inherited from UploaderBase) | The height of the Progress bar. Default 15. |
|  ProgressBarStyle (inherited from UploaderBase) | Specifies the style that a ProgressBar to indicate the progress of an operation. |
|  ProgressCtrlID (inherited from UploaderBase) | It allows the developers specify a server control to use as the progress control PHP File Uploader. |
|  ProgressInfoStyle (inherited from UploaderBase) | The style to be applied to the progress information. |
|  ProgressLabel (inherited from Uploader) | |
|  ProgressLabelStyle (inherited from Uploader) | Gets the progress label style. |
|  ProgressPanel (inherited from Uploader) | |
|  ProgressPanelStyle (inherited from Uploader) | Gets the progress panel style. |
|  ProgressPanelWidth (inherited from UploaderBase) | The width of the Progress Panel. Default 500. |
|  ProgressPicture (inherited from UploaderBase) | Gets or sets a progress fill picture for ProgressBar control. |
|  ProgressTextID (inherited from UploaderBase) | It allows the developers specify a server control to show the progress text of PHP File Uploader. |
|  ProgressTextTemplate | Gets or sets the progress text template. |

| | |
|---|---|
| (inherited from UploaderBase) | %P% = percent,%T% = seconds remain,%F% = filename. %SEND% = uploaded size , %SIZE% = file size , %KBPS% means KB/s , %KBPS% = For example : %F%.. %P% %SEND%/ %SIZE% , %KBPS% , %T% seconds left. |
|  ShowFrameBrowseButton (inherited from UploaderBase) | Gets or sets a boolean indicating whether Uploader should render a browse button in FireFox/Opera in IFrame Mode. |
|  ShowProgressBar (inherited from UploaderBase) | Gets or sets a value indicating whether progress bar is displayed. The UploadModule must be installed to use this feature. |
|  ShowProgressInfo (inherited from UploaderBase) | Gets or sets a value indicating whether progress information is displayed while uploading. The UploadModule must be installed to use this feature. |
|  Site (inherited from Control) | |
|  TempDirectory (inherited from UploaderBase) | Specifies where AjaxUploader should store the temporary files. |
|  TemplateSourceDirectory (inherited from Control) | |
|  UniqueID (inherited from Control) | |
|  UploadingMsg (inherited from UploaderBase) | Gets or sets the "Uploading.." message. |
|  UploadProcessingMsg (inherited from UploaderBase) | Gets or sets the "upload is processing" message. |
|  UploadType (inherited from UploaderBase) | The global type of upload method to use. |

| | |
|---|--|
|  ValidateOption (inherited from UploaderBase) | Gets the validate option. |
|  Visible (inherited from Control) | |
|  WindowsDialogLimitMsg (inherited from UploaderBase) | Gets or sets the message for window browse dialog 32K file name length limitation. |

Public Instance Methods

| | |
|---|--|
|  DataBind (inherited from Control) | |
|  Dispose (inherited from Control) | |
|  Equals (inherited from Object) | |
|  FindControl (inherited from Control) | Overloaded. |

PHP File Uploader Class Reference

AttachmentItemCollection.CopyTo Method

Copies the elements of the [ICollection](#) to an [Array](#), starting at a particular **Array** index.

```
[Visual Basic]
NotOverridable Public Sub CopyTo( _
    ByVal array As Array, _
    ByVal index As Integer _
) _
    Implements ICollection.CopyTo
```

```
[C#]
public void CopyTo(
    Array array,
    int index
);
```

Parameters

array

The one-dimensional [Array](#) that is the destination of the elements copied from [ICollection](#). The **Array** must have zero-based indexing.

index

The zero-based index in array at which copying begins.

Implements

[ICollection.CopyTo](#)

Exceptions

| Exception Type | Condition |
|---|--------------------------------|
| ArgumentNullException | array is null. |
| ArgumentOutOfRangeException | index is less than zero. |
| ArgumentException | array is multidimensional.-or- |

| | |
|--------------------------------------|---|
| | index is equal to or greater than the length of array.-or- The number of elements in the source ICollection is greater than the available space from index to the end of the destination array. |
| InvalidCastException | The type of the source ICollection cannot be cast automatically to the type of the destination array. |

PHP File Uploader Class Reference

UploadPersistedFile.FileChanged Event

Occurs when a file is uploaded and the .File property is changed

```
[Visual Basic]  
Public Event FileChanged As PersistedFileEventArgs
```

```
[C#]  
public event PersistedFileEventHandler FileChanged
```

Event Data

The event handler receives an argument of type [PersistedFileEventArgs](#) containing data related to this event. The following **PersistedFileEventArgs** properties provide information specific to this event.

| Property | Description |
|--------------------------|----------------------------|
| File | Gets the file. |
| FileGuid | Gets the GUID of the file. |
| FileName | Gets the name of the file. |
| FileSize | Gets the size of the file. |

UploadPersistedFile.OnFileChanged Method

Raises the **FileChanged** event.

```
[Visual Basic]
Overridable Protected Sub OnFileChanged( _
    ByVal args As PersistedFileEventArgs _
)
```

```
[C#]
protected virtual void OnFileChanged(
    PersistedFileEventArgs args
);
```

Parameters

args

The [PersistedFileEventArgs](#) instance containing the event data.
